

## Subscription Requests

### Free Subscriptions

Individuals requesting subscriptions, or wishing to change their address, should contact MTsubscriptions at: [AssociationManagement@microscopy.org](mailto:AssociationManagement@microscopy.org)

### Subscription Policies

- Microscopists in the United States and Canada are eligible for gratis mail subscriptions.
- Microscopists in the rest of the world can subscribe to the print edition for \$60US.
- Microscopists in the rest of the world are eligible for gratis email alerts to the digital edition.
- Microscopists anywhere in the world may view the digital edition at the *Microscopy Today* website shown at the bottom of this page.

### Digital Edition

- The digital edition is an exact replica of the print edition, advertisements and all.
- Features include dynamic pages with live webpage and email links, a word-level search function, and variable page magnification to enlarge both text and figures.

*Microscopy Today* has articles about:

- Innovative instruments and methods
- Applications in various fields
- Hints and tips for novices and experts
- Protocols in microscopy and microanalysis
- Microscopy facilities descriptions
- Meetings and courses
- Success stories in microscopy education
- Historical microscopy and pioneers
- Industry news and product news
- Humorous situations
- Opinions of our readers

# OneView Camera

10 nm

**Gatan's award winning OneView camera sets the standard for imaging samples sensitive to beam damage or drift.**

"My review would go something like this:

★★★★★ **Awesome camera**  
Verified Purchase

This has been a great 4k camera for low-dose imaging. The low-dose imaging capabilities of the camera and the option for drift correction work great together! To be honest, I assumed the drift correction option would be something that I would never use. ... In reality, I have gotten **the best HRTEM** images from my samples using the drift correction option. ... This camera has given new life to my elderly TEM!

**I would buy this camera again!**

– Thomas M. Rea, Senior EM, 35 years

See how real-time drift correction allows you to record images before the sample stops drifting and guarantees the highest quality images at the lowest total dose, every time.

# NO COMPROMISE

## ATOMIC RESOLUTION + FAST ANALYSIS

The New "Go-To" TEM from JEOL

# F2

- Cold FEG boosts probe current
- Fast 3D EDS with dual SDD
- Wide-field STEM-EELS spectrum imaging
- Push-button beam conditions
- Ultra-stable, ultra-fast
