

Subscription rates

Subscription rates for volume **49** (2017) of *Advances in Applied Probability* (AAP) are as follows (post free and online access at <http://cambridge.org/apr>). For libraries and institutions: US\$361.00, £233.00 (online only); US\$397.00, £256.00 (online & print). For individuals, US\$137.00, £88.00 (online & print). The subscription rates for volume **54** (2017) of *Journal of Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: subscriptions_newyork@cambridge.org in the Americas and journals@cambridge.org for the Rest of the World.

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address submissions_japaap@sheffield.ac.uk. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/17

Volume 49 **Number 3**

- 653 CHRISTOPHETTE BLANCHET-SCALLIET, CAROLINE HILLAIRET AND YING JIAO. Successive enlargement of filtrations and application to insider information
- 686 LENNART GULIKERS, MARC LELARGE AND LAURENT MASSOULIÉ. A spectral method for community detection in moderately sparse degree-corrected stochastic block models
- 722 TIMO HIRSCHER. Overly determined agents prevent consensus in a generalized Deffuant model on \mathbb{Z} with dispersed opinions
- 745 HERBERT EDELSBRUNNER, ANTON NIKITENKO AND MATTHIAS REITZNER. Expected sizes of Poisson–Delaunay mosaics and their discrete Morse functions
- 768 NICOLAS GAST AND BRUNO GAUJAL. Computing absorbing times via fluid approximations
- 791 JORIS BIERKENS AND ANDREW DUNCAN. Limit theorems for the zig-zag process
- 826 PRASENJIT MONDAL. On zero-sum two-person undiscounted semi-Markov games with a multichain structure
- 850 MIKLÓS BÓNA AND BORIS PITTEL. On a random search tree: asymptotic enumeration of vertices by distance from leaves
- 877 ERICH BAUR AND JEAN BERTOIN. Weak limits for the largest subpopulations in Yule processes with high mutation probabilities
- 903 RAPHAËL CERF. The quasispecies regime for the simple genetic algorithm with roulette wheel selection
- 927 HAN L. GAN, ADRIAN RÖLLIN AND NATHAN ROSS. Dirichlet approximation of equilibrium distributions in Cannings models with mutation
- 960 A. GRIFFIN, P. A. JENKINS, G. O. ROBERTS AND S. E. F SPENCER. Simulation from quasi-stationary distributions on reducible state spaces
