**Erratum to: PSYCHOMETRIKA, 2015, 80, 450–467**  
**DOI 10.1007/s11336-014-9404-2**

Condition 2 of Theorem 2 was incorrect in the published version. The correct condition 2 appears in this erratum.

**Theorem 2.** *Suppose that  $I \geq 3$  for the fixed-effects 3PL model. If  $\omega_1 = (\alpha_1, \beta_1, c_1)$  is fixed at  $(1, 0, 0)$ , then*

1. *The person parameters are identified by the observations.*
2. *The item parameters  $(\alpha_{2:J}, \beta_{2:J}, c_{2:J})$  are not identified by the observations.*

*Published Online Date: 1 AUG 2015*
