N y d r a n e

n-BENZYL- β -CHLOROPROPIONAMIDE

**in the treatment of Grand-mal
and Psychomotor Epilepsy**

NYDRANE is remarkable in that no toxic or unpleasant side-effects have been experienced with its use

NYDRANE usually makes patients more mentally alert, brighter, and more co-operative, opposing even the soporific action of any other anticonvulsant used

NYDRANE often successfully stabilises the more resistant cases, enabling them to lead a more normal, useful life

NYDRANE tablets are *colourless, odourless*, and are readily accepted and well tolerated

Nydrane tablets each containing 500 mg. *n*-benzyl- β -chloropropionamide, and Nydrane Co. tablets each containing 500 mg. Nydrane with 20 mg. Phenobarbitone, are available in bottles of 50 and 250, and tins of 1,000 tablets

Clinically proven

S P A R I N E*

(PROMAZINE HYDROCHLORIDE)

Psychoactivity, anti-emetic action, and enhancing effect on analgesics—these are the three important properties that make Sparine so valuable in general as well as in specialist practice. Clinical experience reveals its effectiveness in controlling acute agitation, nausea and vomiting and in the management of pain. And the reports further show that Sparine offers a safe and dependable method of treatment, well tolerated by oral or parenteral administration and remarkably free from serious side-effects.

Full details on indications and dosage are available on request.

PACKS :

For parenteral use :

5% solution in 2 ml. ampoules. Boxes of 10.

For oral use :

Tablets in bottles of 50 and 250.

25mg. (yellow); 50mg. (orange); 100mg. (red).

Wyeth

In nervous tension and anxiety neuroses

TO RESTORE TONE and tranquillity in the emotionally disturbed and overwrought patient is one of the most valuable functions of 'Mepavlon'. Distinguished by its ability to promote equanimity and to relax muscle spasm it has proved highly effective in the treatment of anxiety neuroses, states of tension and stress and a variety of neurological disorders.

Safety in use is a further characteristic: 'Mepavlon' has no action on the autonomic nervous system, its toxicity is low, and side effects following its use are rare.

'Mepavlon' is available in tablets of 400 mg., in packings of 30 and 250.

PACATAL

10-(*N*-methyl-3-piperidylmethyl) phenothiazine

TRADE MARK

Pacatal is the improved tranquillizing drug with a range of activity significantly different in some aspects from that of chlorpromazine. Within the psychiatric field, response to Pacatal is most marked

in the treatment of

PARANOID SCHIZOPHRENICS

AGITATED DEPRESSIVES

SENILE PATIENTS

Pacatal tends to produce better results in patients over fifty than in the younger age groups and it has also been observed that women often respond better than men.

Presentation:

Tablets 25 and 100 mg. in bottles of 50 and 500.
Ampoules, each containing 50 mg. in 2 ml.
in boxes of 10 and 50.

WILLIAM R. WARNER & CO. LTD., LONDON and EASTLEIGH

AC 962/8

Introducing

This association of 'Largactil' with amylobarbitone allows the characteristic therapeutic response of chlorpromazine to be obtained while the clinical usefulness of the amylobarbitone is increased.

The indications for 'Amargyl' are mainly in psychoneuroses, particularly in anxiety and tension states, and as an adjuvant to psychotherapy.

'Amargyl' is presented as lime-coloured, sugar-coated tablets each containing chlorpromazine hydrochloride 25 mgm., and amylobarbitone 50 mgm.

Further information is available on request.

An Introduction to Psychopathology

D. Russell Davis

*Reader in Clinical Psychology, University of Cambridge
Consultant Psychiatrist, United Cambridge Hospitals*

As a general rule psychiatrists have little time or opportunity to work in a psychological laboratory. Likewise, psychologists seldom have much knowledge of the specialized problems that arise in the psychiatric clinic. Thus to both are denied through lack of mutual understanding, many benefits that would be gained by successful co-operation.

The purpose of this book is to bridge the gap between the psychiatric clinic and the psychological laboratory. It will be of service both to psychiatrists seeking for an explanation to their clinical problems, and to psychologists hoping to find practical applications for their research work.

The first part reviews all the principal theories against a background of experimental evidence, obtained by recent research; gives a detailed account of the effects of the family environment upon the mental development of children, in particular upon the development of intellectual functions, speech and language habits, and sexual behaviour; and describes fully disorders in the development of these functions.

The second part discusses the mechanisms of behavioural and mental symptoms in relation to modern psychological knowledge and includes chapters on experimental neurosis, applications of behaviour theories, disorders of mental functions and disorders resulting from brain lesions. The final chapter discusses methods of treatment and explains the rationale of modern psychotherapeutic methods.

The subject is presented in such a way that it will be of equal value to all who are engaged in medical practice as well as to many others who, although not practising medicine, are in some way professionally concerned with problems of nervous or mental illness, or of mental retardation, in children and adults.

OXFORD UNIVERSITY PRESS

INSTRUCTIONS TO AUTHORS

Strict observation of the following requirements will save intending authors considerable time and worry, and will facilitate the publication of papers submitted.

(1) Authors should consult a current issue to see how a paper should be presented. They should consult *General Notes on the Preparation of Scientific Papers*, published for the Royal Society by the Cambridge University Press, 200 Euston Road, London, N.W.1 (price 2s. 9d. post free).

(2) The title should be brief and contain no sub-heading. This should be followed by the author's name, his qualifications and his present appointment.

(3) Omit a summary of the literature when this has been adequately summarized elsewhere.

(4) For reasons of economy, case-histories of patients can be published only when they are of exceptional scientific interest.

(5) Diagrams and graphs must be drawn in black ink with properly printed lettering. If they have to be redrawn by the printer, the cost, which may amount to several pounds, will be charged to the author.

(6) Tables and graphs should be kept as few as possible. If they number more than a few, the author must be prepared to pay part of their cost.

(7) Any deviation or difference that might be due to random sampling must, if it is to be discussed in its general, scientific significance, be first shown, by calculation of the appropriate probability, to be significant statistically.

(8) All references should be given at the end of the paper, in alphabetical order, and be numbered, i.e.

(1) SMITH, A. B., *J. Ment. Sci.*, 1950, **95**, 493.

(2) THOMAS, B. C., *Arch. Neur. Psychiat.*, 1955, **74**, 489.

In the body of the paper they should appear as: Smith (1), Thomas (2).

(9) When the proof arrives from the printer it is for the correction of printer's mistakes only. Larger alterations can be made only with the Editor's permission and if the author is willing to defray the cost.

(10) Each author and co-author will receive 10 reprints of his paper free of charge. If further reprints are required the order should be sent **direct** to Messrs. Headley Brothers, Ltd., The Invicta Press, Ashford, Kent.

(11) A paper sent to the Editor-in-Chief is, as a rule, sent to one of the panel of Referees set out on the cover of the Journal for his opinion. Papers are as a rule not rejected until a second or further opinion has been received.

FOR THE VITAMIN B-COMPLEX IN HIGH CONCENTRATION

On San Benedicto Island off California smokes the world's newest active volcano.

Orovite contains the main vitamins of the B complex in very high concentrations for massive oral dosage. It is suitable for all patients in whom physical and psychological well-being depend on the restoration of normal intra-cellular metabolism after severe illness. It is useful to accelerate recovery after operation or such infections as influenza or pneumonia.

TABLETS: *in packs of 25, 100 or 500. Dose 1 to 3 tablets daily.*

ELIXIR: *in 6 fl. oz. and 40 fl. oz. bottles. Dose 1 to 3 teaspoonfuls daily.*
