# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY  
WALTER HOWARTH

ASSISTANT EDITOR  
G. H. BATEMAN

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is four guineas sterling (U.S.A. \$13) post free, and is payable in advance.

9. Single copies will be on sale at 10s. od. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

## United States of America

Orders for this *Journal* may be sent through local bookseller, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

## WHICH DEAF AID?

Your patient can compare a complete range of aids to hearing at no extra cost.

Mr. D. C. ALLEN, a member of the Society of Hearing Aid Audiologists, will advise your patients impartially and demonstrate a selection of the leading makes of hearing aids without obligation.

### FOR YOUR OWN GUIDANCE

Send now for an attractive, specially prepared *Desk Folder* which will tell you at a glance "which deaf aid suits which kind of deafness," complete with a reply-paid referral pad. (Over 50 different fittings are listed.)

**First clinical audiometer  
to provide  
100% accurate audiograms**

**AMPLIVOX MODEL 82**

**world's most fully-developed clinical audiometer**

It is now known that the disc type of earphone, used in conventional audiometers for air conduction testing and the application of masking noise, transfers the sound by bone conduction to the opposite ear at a level only 40 dB below the signal level. This means that up to 50% of audiograms taken at the present time with other audiometers may be invalid.

The Amplivox Model 82 Audiometer provides, for the first time, the means of taking accurate audiograms in cases of severe unilateral deafness through the provision of narrow band masking applied by insert earphone. This new masking technique is of special significance in bone conduction audiometry.

In addition to the exclusive narrow band masking feature, the Model 82 provides loudness balance test facilities, and all the other tests essential to proved pure tone audiometry.

CASE I.

# Fitting HEARING AIDS in DIFFICULT CASES

Case I: LORD E. AGE 75

*History:* Progressive deterioration in hearing over many years. Presbycusis. Tried several hearing aids without success.

*Hearing aid fitting:* Amplivox Model AV, 9W wide range phone, amplifier with reduced low tone response. Maximum AVC setting.

*Maximum Intelligibility:* With hearing aid in left ear—90%

*Remarks:* Has expressed great satisfaction with clarity of tone and the substantial assistance obtained in all situations.

In measuring the performance of a hearing aid, no yardstick is more indicative than the results achieved in 'difficult cases'. The above case history is only one of the many successes which Amplivox have had over the past quarter-century.

Contributing to this success are the care and thoroughness with which the Amplivox Hearing Advisory Service fit a hearing aid. Air and bone conduction pure tone audiograms, loudness tolerance levels and phonetically balanced word tests are the basis of testing. It is this extreme care in testing and fitting which, coupled with expert knowledge of the instrument characteristics, ensures optimum hearing in all cases.

Amplivox incorporate the world's finest hearing aids in their range, including head-borne and body-worn aids (many

incorporating AVC) from the Super 'A', for the profoundly deaf, to the latest all-behind-the-ear model, Secrette.

There are permanent Amplivox Hearing Advisory Centres in principal cities throughout the country, providing a reliable and thorough service for the hard-of-hearing.

For further information and descriptive literature please telephone the local Amplivox Centre or write to:

## **'OTOSPORIN'** clears infected ears

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' brand Drops.

'Otosporin' is an aqueous suspension containing both neomycin and polymyxin B sulphate which are together effective against practically all the bacteria found in ear infections. They are unlikely to induce bacterial resistance or skin sensitisation, and neither of them gives rise to cross-resistance or cross-sensitisation to penicillin and other antibiotics. Their effectiveness is visibly enhanced by the hydrocortisone in 'Otosporin'; this, by reducing inflammation, not only relieves pain, but provides greater access for the antibiotics.

**'OTOSPORIN'**<sup>BRAND</sup> drops  
*issued in bottles of 5 c.c.*
