GLASGOW MATHEMATICAL JOURNAL

Edited by

R. A. RANKIN, R. P. GILLESPIE,
T. S. GRAHAM, A. GEDDES

This is a continuation of the *Proceedings of the Glasgow Mathematical Association*, which was founded in 1952.

Although the Journal is intended primarily for the publication of original work in Pure Mathematics, papers on Applied Mathematics are also included.

Published twice yearly in JANUARY and JULY

The 1968 volume is number 9

Annual subscription 50s U.S.A. $7.00
Single part 25s. U.S.A. $3.50 plus postage 1s.

Seven volumes of the *Proceedings* were issued between 1952 and 1966. Complete sets of back volumes are still available.

Inquiries and subscription orders should be sent to the publishers

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields : such as frequency distributions, estimation and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possibly containing contributions of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars : technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional " double abstracts " for papers where this size is not sufficient to represent the paper. The language is English ; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published, moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper ; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

Annual Subscription	£7, 10s. (U.S.A. $24.00)
Single Number	£2, 5s. (U.S.A. $7.00)
Loose Leaf Binders for Single Abstract Sheets	16s. 3d. including postage and packing.

UNIVERSITY MATHEMATICAL TEXTS

Editors ALAN JEFFREY and IAIN ADAMSON

The aim of this series is to provide compact and inexpensive textbooks for undergraduates on standard topics of mathematics. A selection from the series is listed below. You are invited to write to us for a copy of our descriptive leaflet which gives full details of the ground covered in each of the thirty-eight titles now available.

		Paperback	*Hardback*
1. Determinants and Matrices	A. C. AITKEN	10s 6d	13s 6d
4. Integration of Ordinary Differential Equations	E. L. INCE	12s 0d	—
7. Functions of a Complex Variable	E. G. PHILLIPS	10s 6d	13s 6d
11. Electricity	C. A. COULSON	13s 6d	17s 6d
13. Introduction to the Theory of Finite Groups	W. LEDERMANN	10s 6d	13s 6d
14. Classical Mechanics	D. E. RUTHERFORD	13s 6d	17s 6d
29. Numerical Methods: I	B. NOBLE	10s 6d	13s 6d
30. Numerical Methods: II	B. NOBLE	13s 6d	17s 6d
31. Elementary Abstract Algebra	E. M. PATTERSON and D. E. RUTHERFORD	13s 6d	17s 6d
33. Magnetohydrodynamics	A. JEFFREY	13s 6d	17s 6d
34. An Introduction to Modern Mathematics	A. MONJALLON	13s 6d	17s 6d
35. Quantum Mechanics	R. A. NEWING and J. CUNNINGHAM	17s 6d	27s 6d
36. Probability	J. R. GRAY	17s 6d	27s 6d
37. Series Expansions for Mathematical Physicists	H. MESCHOWSKI	21s 0d	27s 6d
38. Calculus of Variations	J. C. CLEGG	21s 0d	27s 0d
