

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc> .

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Iterative processes with errors for nonlinear equations Ljubomir Ćirić and Jeong Sheok Ume	177
On involutive Lie algebras having a Cartan decomposition A.J. Calderón Martín	191
Isomorphism classes of authentication codes Rongquan Feng, Jin Ho Kwak and E. Keith Lloyd	203
On the Boas-Bellman inequality in inner product spaces S.S. Dragomir	217
A note on the Doob–Meyer-decomposition of L^p-valued submartingales B. Burgstaller	227
Every AF-algebra is Morita equivalent to a graph algebra Jason Tyler	237
Etude des interruptions dans l'algorithme de Jacobi–Perron Eugène Dubois, Ahmed Farhane and Roger Paysant-Le Roux	241
Spectral multipliers of Laplace transform type for the Laguerre operator Emanuela Sasso	255
Nontrivial solutions of a semilinear elliptic problem via variational methods Zhi-Qing Han	267
On a new singular direction of meromorphic functions Guo Hui, Zheng Jian Hua and Tuen Wai Ng	277
Finite dimensional characteristics related to superreflexivity of Banach spaces M.I. Ostrovskii	289
α-T-menability of groups acting on trees Światosław R. Gal	297
On the interpolation of bivariate polynomials related to the Diffie–Hellman mapping Eike Kiltz and Arne Winterhof	305
Prime powers as conjugacy class lengths of π-elements Antonio Beltrán and María José Felipe	317
On Bessel and Grüss inequalities for orthonormal families in inner product spaces S.S. Dragomir	327
Finitistic dimension and good filtration dimensions of stratified algebras Shugui Wang and Bin Zhu	341
Corrigendum: Irreducible decomposition of the Magnus representation of the Torelli group Masaaki Suzuki	349

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Topics in statistical mechanics: the n-friendly walker model and benzenoid systems Markus Vöge	351
