INDEX FOR VOLUME 168

	PAGE
Adiprasito, K., Nevo, E. & Tancer, M. On Betti numbers of flag complexes with forbidden induced subgraphs	567
Badziahin, D. & Zorin, E. On the irrationality measure of the Thue–Morse constant	455
Balmer, P., Krause, H. & Stevenson, G. The frame of smashing tensor-ideals	323
Barman, R. & Saikia, N. Supercongruences for truncated hypergeometric series and p -adic gamma function	171
Bowditch, B.H. Median and injective metric spaces	43
Burness, T.C. & Giudici, M. On the Saxl graph of a permutation group	219
Castellano, I. Rational discrete first degree cohomology for totally disconnected locally compact groups	361
Conant, G., Pillay, A. & Terry, C. A group version of stable regularity	405
Diao, Y., Heteyi, G. & Liu, P. The braid index of reduced alternating links	415
Dundas, B.I., Lindenstrauss, A. & Richter, B. Towards an understanding of ramified extensions of structured ring spectra	435
Guo, S. & Oh, C. Remarks on Wolff’s inequality for hypersurfaces	249
Grinberg, D., Huang, J. & Reiner, V. Critical groups for Hopf algebra modules	473
Halevi, Y. & Kaplan, I. A generalisation of von Staudt’s theorem on cross-ratios	601
Hanson, B. Additive correlation and the inverse problem for the large sieve	211
Huang, J.-J. Diophantine approximation on the parabola with non-monotonic approximation functions	535
Ilmavirta, J., Lehtonen, J. & Salo, M. Geodesic X-ray tomography for piecewise constant functions on nontrapping manifolds	29
Khan, R. The fifth moment of Hecke L -functions in the weight aspect	543
Lam, C.H. & Shimakura, H. On orbifold constructions associated with the Leech lattice vertex operator algebra	261
Larcher, G. & Stockinger, W. Pair correlation of sequences $(\{a_n\alpha\})_{n \in \mathbb{N}}$ with maximal additive energy	287
Liu, C.-K. The structure of triple homomorphisms onto prime algebras	345
McCarthy, D., Osburn, R. & Straub, A. Sequences, modular forms and cellular integrals	379
Molter, U. & Yavicoli, A. Small sets containing any pattern	57
Nasseh, S. & Takahashi, R. Local rings with quasi-decomposable maximal ideal	305
Nguyen, N. & Trivedi, S. Transversality of smooth definable maps in O -minimal structures	519
Olberding, B. Krull’s principal ideal theorem in non-Noetherian settings	13
Oliver, R.J.L. & Soundararajan, K. The distribution of consecutive prime biases and sums of sawtooth random variables	149
Simon, K. & Taylor, K. Interior of sums of planar sets and curves	119
Scherich, N. Classification of the real discrete specialisations of the Burau representation of B_3	295
Torzewski, A. Regulator constants of integral representations of finite groups	75
Wang, S., YEH, Y.-N. & Zhou, F. Linear bounds on characteristic polynomials of matroids	505
Warren, L. On the iteration of quasimeromorphic mappings	1
Wildon, M. Permutation groups containing a regular abelian subgroup: the tangled history of two mistakes of Burnside	613
Zhai, S. On the weak forms of the 2-part of Birch and Swinnerton-Dyer conjecture	197

INSTRUCTIONS TO AUTHORS

1. Preparation of Manuscripts

A paper should be submitted electronically to mpeditor@hermes.cam.ac.uk in pdf form only. Authors are encouraged to prepare their manuscripts in LaTeX 2 ϵ using the PSP class file. The class file, together with a guide, `PSP2egui.tex`, and sample pages, `PSP2esam.tex`, can be downloaded from <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/pspscls> in either packed or unpacked form. These files will be updated periodically: please ensure that you have the latest version.

A cover page should give the title, the author's name and institution, with the address to which mail should be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas, *Some applications of a theorem of G. H. Hardy* would be useless).

Authors are asked to provide an abstract as a basis for search on the Web. This may be an explicit abstract at the start of the paper. Otherwise the first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians. Please note that the abstract should be able to be read independently of the main text. References should therefore not be included in the abstract.

Authors are encouraged to check that where references are given, they are used in the text. Experience has shown that unused references have a habit of surviving into the final version of the manuscript.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician). Please also check the Cambridge University Press website for information about the style in which the paper should be submitted.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and to reduce the chance of error. For instance n sub k is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like:

$$\exp\{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example 'from (7)'.
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; l , 1 ; ϵ , k , κ , k .

Footnotes should be avoided.

Please use typewriter font for all addresses and email addresses.

Omit * from the end of proofs.

In listing assertions, conclusions, etc. do not use a vertical column of dots and do not follow (a) or (i) by a capital letter (eg. (i) the absolute value . . .)

In making references precise use [3, theorem 5.1]

3. Diagrams

Diagrams should be in black ink or from a high-quality laser printer and should not be larger than 30 cm by 45 cm. Lettering to be inserted by the printer should be shown clearly on copies of the figures rather than on the original drawings. Please note that a charge may be made if hand-drawn diagrams need to be re-drawn for publication.

Figure 1 here

A typed list of captions may be provided at the end of the manuscript in the following format:

Figure 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

Heading for tables should be shown in the following way:

Table 1. *A basis for ...*

Note that there is no point at the end of the heading. All headings should be centred over columns.

5. References

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. Where references are given, they should be used in the text. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

[1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) **72** (1960), 20-104.

[2] M. P. FOURAM and D. S. SCOTT. Sheaves and logic. *In Applications of Sheaves* Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302-401.

[3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).

[4] F. W. LAWVERE. Functional semantics of algebraic theories. PhD. thesis. Columbia University (1963).

6. Submission of papers accepted for publication

When a paper has been accepted for publication the relevant TeX files of the final version, accompanied by a pdf file, should be sent to the Editor by e-mail.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

MATHEMATICAL PROCEEDINGS

VOLUME 168 PART 3, pages 415–633, May 2020

CONTENTS

YUANAN DIAO, GÁBOR HETYEI & PENGYU LIU The braid index of reduced alternating links	415
BJORN IAN DUNDAS, AYELET LINDENSTRAUSS & BIRGIT RICHTER. Towards an understanding of ramified extensions of structured ring spectra	435
DZMITRY BADZIAHIN & EVGENIY ZORIN On the irrationality measure of the Thue–Morse constant	455
DARIJ GRINBERG, JIA HUANG & VICTOR REINER Critical groups for hopf algebra modules	473
SULJIE WANG, YEONG–NAN YEH & FENGWEI ZHOU Linear bounds on characteristic polynomials of matroids	505
NHAN NGUYEN & SAURABH TRIVEDI Transversality of smooth definable maps in O-minimal structures	519
JING–JING HUANG Diophantine approximation on the parabola with non-monotonic approximation functions	535
RIZWANUR KHAN The fifth moment of Hecke L -functions in the weight aspect	543
KARIM ADIPRASITO, ERAN NEVO & MARTIN TANCER On Betti numbers of flag complexes with forbidden induced subgraphs	567
YATIR HALEVI & ITAY KAPLAN A generalisation of von Staudt’s theorem on cross-ratios	601
MARK WILDON Permutation groups containing a regular abelian subgroup: the tangled history of two mistakes of Burnside	613
