

Two new volumes in the new series of
CAMBRIDGE PHYSICAL TRACTS

**THE MOBILITY OF
POSITIVE IONS IN GASES**

By A. M. TYNDALL

33 text-figures. 6s. net

This book gives a concise and connected account of the results of investigations made in the H. H. Wills Physical Laboratory.

CONTENTS

I. Historical; II. Method of Measurement; III. Source of Ions; IV. Theoretical; V. Experimental Data; VI. Effect of Temperature; VII. Relation between Mobility, Field and Pressure; The Effect of Polar Impurities; The Nature of Ions in Air; VIII. Large Ions; Appendix; Index.

SUPERCONDUCTIVITY

By D. SHOENBERG

23 text-figures. 6s. net

The classic experiment of Meissner and Ochsenfeld a few years ago led to considerable revision of the phenomenological aspect of Superconductivity, and showed serious flaws in its theory. Recent developments, though they have not materially altered this position, have at least made possible a coherent statement of what it is that the theory has to explain. This statement is set out in the present survey.

CONTENTS

| | PAGE |
|---|------|
| LITTLEWOOD, J. E. and OFFORD, A. C. On the number of real roots of a random algebraic equation. II. | 13 |
| ERDŐS, P. On the easier Waring problem for powers of primes. II. | 14 |
| SEMPLE, J. G. Base conditions and covariant systems in an algebraic threefold | 16 |
| BARTLETT, M. S. A note on tests of significance in multivariate analysis | 18 |
| EDDINGTON, SIR ARTHUR. Lorentz-invariance in quantum theory | 18 |
| CORBEN, H. C. The uncertainty of the reference frame in quantum mechanics | 19 |
| GOODWIN, E. T. Electronic states at the surfaces of crystals. I. The approximation of nearly free electrons | 20 |
| GOODWIN, E. T. Electronic states at the surfaces of crystals. II. The approximation of tight binding: finite linear chain of atoms. (With 4 Figures in the Text) | 22 |
| GOODWIN, E. T. Electronic states at the surfaces of crystals. III. The approximation of tight binding: further extensions | 23 |
| FUCHS, K. On the stability of nuclei against β -emission. (With 3 Figures in the Text) | 24 |
| TEMPERLEY, H. N. V. Time effects in the magnetic cooling method | 25 |
| CHANG, T. S. The number of configurations in an assembly and cooperative phenomena | 26 |
| ROBERTS, J. K. and MILLER, A. R. The application of statistical methods to immobile adsorbed films. (With 2 Figures in the Text) | 29 |
| SMITH, C. L. and MURRELL, MISS E. B. M. The disintegration of the separated isotopes of boron under proton and deuteron bombardment. (With 2 Figures in the Text) | 29 |
| LAWRANCE, MISS A. M. The production of ${}^8\text{Li}$ by bombardment of boron with neutrons. (With 2 Figures in the Text) | 30 |
| CURRAN, S. C. and PETRŽILKA, V. Methods of construction of Geiger-Mueller counters and their use in coincidence experiments. (With 8 Figures in the Text) | 30 |
| WARD, A. G. The γ -rays of ionium. (With 2 Figures in the Text) | 32 |
| SHIRE, E. S. and BARKLA, H. M. The heating of iron ammonium alum by alternating magnetic fields at very low temperatures. (With 8 Figures in the Text) | 32 |
| RESEARCH NOTES: | |
| HSU, P. L. A new proof of the joint product moment distribution | 33 |
| GOLDSTEIN, S. A note on the boundary layer equations | 33 |
| LEE, E. and SUTHERLAND, G. B. B. M. A peculiarity in the infra-red absorption spectrum of germane. (With 1 Figure in the Text) | 34 |
