Contents

No. 1 (February 1987)

VERDONCK, MARGRIET V. Adaptation to environmental heterogeneity in populations of <i>Drosophila melanogaster</i>	1
BOUSSY, IAN A. A latitudinal cline in <i>P-M</i> gonadal dysgenesis potential in Australian <i>Drosophila melanogaster</i> populations	11
TSAKAS, S. C., LAMNISOU, K., TSACAS, L. and DAVID, J. R. Sex ratio distortion in <i>D. simulans</i> after treatment with quinacrine	19
GYLLENSTEN, ULF and WILSON, ALLAN C. Interspecific mitochondrial DNA transfer and the colonization of Scandinavia by mice	25
MONTGOMERY, ELIZABETH, CHARLESWORTH, BRIAN and LANGLEY, CHARLES H. A test for the role of natural selection in the stabilization of transposable element copy number in a population of <i>Drosophila melanogaster</i>	31
KAROLYI, I. JILL, LIU, SHARON and ERICKSON, ROBERT P. Susceptibility to phenytoin-induced cleft lip with or without cleft palate: many genes are involved	43
SILVER, LEE M. and REMIS, DAVID. Five of the nine genetically defined regions of mouse <i>t</i> haplotypes are involved in transmission ratio distortion	51
LYON, MARY F. Distorter genes of the mouse <i>t</i> -complex impair male fertility when heterozygous	57
MIDDLETON, RICHARD J., MARTIN, S. A. M. and BULFIELD, GRAHAME. A new regulatory gene in the histidine decarboxylase gene complex determines the responsiveness of the mouse kidney enzyme to testosterone	61
TEMPLETON, ALAN R. The general relationship between average effect and average excess	69
GOLDING, G. BRIAN. The detection of deleterious selection using ancestors inferred from a phylogenetic history	71
BOOK REVIEWS	83
BOOKS RECEIVED	91

No. 2 (April 1987)

AINSWORTH, C. C., MILLER, T. E. and GALE, M. D. α -Amylase and β -amylase homoeoloci in species related to wheat	93
HARTMAN, PHILIP S. Caffeine-resistant mutants of <i>Caenorhabditis elegans</i>	105
HOSHIZAKI, DEBORAH K., DLOTT, BONNIE M., JOSLYN, GEOFFREY L. and BECKENDORF, STEVEN K. Genetic localization of a regulatory site necessary for the production of the glue protein P5 in <i>Drosophila melanogaster</i>	111
LEIGH BROWN, ANDREW J. and MOSS, JULIE E. Transposition of the I element and <i>copia</i> in a natural population of <i>Drosophila melanogaster</i>	121
MORTIMER, SUZANNE I and JAMES, J. W. Changes in genetic parameters under restricted index selection	129
PAMILO, PEKKA, NEI, MASATOSHI and LI, WEN-HSIUNG. Accumulation of mutations in sexual and asexual populations	135
VIA, SARA and LANDE, RUSSELL. Evolution of genetic variability in a spatially heterogeneous environment: effects of genotype-environment interaction	147
BARTON, N. H. and TURELLI, MICHAEL. Adaptive landscapes, genetic distance and the evolution of quantitative characters	157
BOOK REVIEWS	175
BOOKS RECEIVED	181

No. 3 (June 1987)

BERNSTEIN, CAROL. Damage in DNA of an infecting phage T4 shifts reproduction from asexual to sexual allowing rescue of its genes	183
MARTINELLI, S. D. Antisuppressor mutations in <i>Aspergillus nidulans</i> : cold-resistant revertants of suppressor <i>suaC109</i>	191
RUDOLPH, PAUL H. and BURCH, J. B. Inheritance of alleles at ten enzymatic loci of the fresh water snail <i>Stagnicola elodes</i> (Basommatophora: Lymnaeidae)	201
HOWELL, A. M., GILMOUR, S. G., MANCEBO, R. A. and ROSE, A. M. Genetic analysis of a large autosomal region in <i>Caenorhabditis elegans</i> by the use of a free duplication	207
TAUBER, CATHERINE A. and TAUBER, MAURICE J. Inheritance of seasonal cycles in <i>Chrysoperla</i> (Insecta: Neuroptera)	215
MACKAY, TRUDY, F. C. Transposable element-induced polygenic mutations in <i>Drosophila melanogaster</i>	225
MUGGLETON-HARRIS, A. L., FESTING, M. F. W. and HALL M. A gene location for the inheritance of the Cataract Fraser (<i>Cat^{Fr}</i>) mouse congenital cataract	235
BEERMANN, FRIEDRICH, JENDERNY, JUITA, HUMMLER, EDITH and HANSMANN, INGO. Inheritance of a meiosis I error expressed in mouse oocytes and modulated by a maternal factor	239
MINVIELLE, FRANCIS. Dominance is not necessary for heterosis: a two-locus model	245
Abstracts of papers presented at the Mammalian Genetics Group meeting held in the Linnean Society Rooms, Piccadilly, London, on 25 and 26 November 1986	249

NOTES TO CONTRIBUTORS

GENETICAL RESEARCH publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Reviews of topical interest will also be considered. Papers will be submitted to referees, and will generally be printed in order of acceptance. Short papers (see below) will be given priority in publication.

CONTRIBUTIONS are welcomed from scientists of all nationalities, but must be written in English. Papers should be sent to the Executive Editor, Dr E. C. R. Reeve, Institute of Animal Genetics, West Mains Road, Edinburgh EH9 3JN, or to a member of the Editorial Board with a particular interest in that area of genetics. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers should be as concise as clarity permits, and illustrations should be restricted to the *minimum needed*.

SHORT PAPERS This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 4 pages of print in length, and should include a summary.

TYPESCRIPTS A top copy and two other copies should be submitted. The top copy should be typed with double-spacing on one side of good quality paper, leaving margins of about 1½ inches at the left-hand side and at the top and bottom of each sheet. Each copy should include a complete set of illustrations. The title should ordinarily identify the organism. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address may be added in footnotes. A footnote to the title page should also give the name and address to whom reprint requests may be made. Sources of financial support should be included with other acknowledgements at the end of the text. The title page of the typescript should include a short title for running headlines (limited to 50 letters and spaces), and the name and address of the author (or his proxy) to whom the proofs are to be sent, under the heading: *Proofs to be sent to...* Main headings should be typed in capitals and (except summary and references) numbered consecutively. Subheadings should be typed in lower case, and underlined except for those words and symbols which would be italicized in the text. Subheadings should be numbered (i), (ii), etc., within each main heading. **Numeral 1 and letter el: if your typewriter uses one symbol for both, please make clear to the Printer which is intended in formulae, gene symbols, etc.**

SUMMARY The summary will be printed at the beginning of the paper. It should give a concise abstract of the significant content and conclusions of the paper, in a form suitable for abstracting journals to use, and should not exceed 250 words.

ILLUSTRATIONS The separate category of Plates no longer applies in the new format. All illustrations, including photographs, diagrams, graphs etc. are to be labelled consecutively Figure 1, 2... according to their relative positions in the text. Each figure should have a legend to be printed underneath it. Photographs should be supplied as unmounted glossy prints, with a sketch or separate set to show the arrangement required when several photographs are to form one figure. The names of the authors and the

orientation of the figure should be indicated on the back of each photograph. *Diagrams* should be about twice the size of the printed figure, but not larger than 12 × 8 inches, unless exceptionally complicated, and the thickness of lines and size of points should be determined accordingly. They may be submitted as glossy photographic prints or be drawn in indian ink on white Bristol-board, tracing linen or graph paper ruled in pale blue (but not other colours). The lettering on drawings should be lightly inserted *in soft pencil only*, so that the printer can put in the finished lettering. Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back.

TABLES Each table should be typed on a separate sheet of paper and its approximate position in the text indicated on the typescript. Each should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion. Table footnotes should ordinarily employ the symbols *, †, ‡, §, ||, ¶, **, etc., in that order.

SYMBOLS Gene and mathematical symbols should generally be printed in italics. Please underline those to be italicized when they appear in the text and tables. Bold letters add to printing costs and should only be used where they are necessary to avoid confusion. The author must assume responsibility for the accurate printing of complex mathematical formulae submitted in typewritten form, by differentiating between letters and numbers which are open to misinterpretation, and identifying all Greek, Hebrew and script letters by means of marginal notes at their first appearance. Note that Greek symbols cannot be italicized and that '+' as the symbol for a wild-type allele should not be italicized.

NOMENCLATURE Wherever possible, standardized nomenclature should be employed. The author should refer to the following publications for guidance: Novick *et al.* (*Bacteriological Reviews* 40, 168–189) for plasmids; O'Brien (Ed.), *Genetic Maps* 3, Cold Spring Harbor 1984, for recent information on most species and recent gene lists.

REFERENCES should follow the normal usage in the journal. In the list of references at the end of the paper, *both titles of articles and names of periodicals* should be written out in full.

PROOFS Two sets of single-sided page proofs, together with the typescript of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor, together with the typescript. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Correction should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

OFFPRINTS Fifty offprints of each paper, or short paper, are provided free of charge. Additional offprints may be ordered in the form sent out with proofs, provided this is returned within fourteen days of receipt.
