

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **40** Part **4** April **2022**

A method for autonomous collision-free navigation of a quadrotor UAV in unknown tunnel-like environments Taha Elmokadem and Andrey V. Savkin	835
A physics perspective on lidar data assimilation for mobile robots Yann Berquin and Andreas Zell	862
Multi-objective optimal trajectory planning for manipulators in the presence of obstacles Xiaofu Zhang and Guanglin Shi	888
Analysis of exit probability for a trajectory tracking robot in case of a rare event Rohit Rana, Prerna Gaur, Vijyant Agarwal, and Harish Parthasarathy	907
Development of 'ibuki' an electrically actuated childlike android with mobility and its potential in the future society Yoshihiro Nakata, Satoshi Yagi, Shiqi Yu, Yifei Wang, Naoki Ise, Yutaka Nakamura and Hiroshi Ishiguro	933
Improving the performance of parallel robots by applying distinct hybrid control techniques André G. Coufinho and Tarcisio A. Hess-Coelho	951
Emission source tracing based on bionic algorithm mobile sensors with artificial olfactory system Denglong Ma, Weigao Mao, Wei Tan, Jianmin Gao, Zaoxiao Zhang and Yunchuan Xie	976
Robust fuzzy sliding mode control and vibration suppression of free-floating flexible-link and flexible-joints space manipulator with external interference and uncertain parameter Limin Xie, Xiaoyan Yu, and Li Chen	997
Kinematic modeling and solution of rigid-flexible and variable-diameter underwater continuous manipulator with load Chen Yang, He Xu, Xin Li and Fengshu Yu	1020
An obstacle avoidance algorithm for space hyper-redundant manipulators using combination of RRT and shape control method Xiaobo Zhang, Jinguo Liu, and Yangmin Li	1036
Miniature parallel robot with submillimeter positioning accuracy for minimally invasive laser osteotomy Manuela Eugster, Jean-Pierre Merlet, Nicolas Gerig, Philippe C. Cattin and Georg Rauter	1070
Dynamics and path tracking of continuum robotic arms using data-driven identification tools Aida Parvareh and S. Ali A. Moosavian	1098
Global motion planning and redundancy resolution for large objects manipulation by dual redundant robots with closed kinematics Yongxiang Wu, Yili Fu and Shuguo Wang	1125
Design of a variable stiffness index finger exoskeleton Abhishek Aital and Ashish Dutta	1151
FEA-based tracking control of flexible body switching dynamic structure M. R. Homaeinezhad and F. FotoohiNia	1168
Tracking linear deformable objects using slicing method Alireza Rastegarpanah, Rhys Howard and Rustam Stolkín	1188
An approach to drastically reduce the required legs DOFs for bipedal robots and lower-limb exoskeletons Rodrigo S. Jamsola Jr., and Rodney G. Roberts	1207
Degree of muscle-and-tendon tonus effects on kinesthetic illusion in wrist joints toward advanced rehabilitation robotics Hiraku Komura, Takumu Kubo, Masakazu Honda and Masahiro Ohka	1222
New repetitive motion planning scheme with cube end-effector planning precision for redundant robotic manipulators Limin Shen, and Yuanmei Wen	1233
Dynamics modeling of human-machine control interface for underwater teleoperation – ERRATUM Giovanni Gerardo Muscolo, Simone Marcheschi, Marco Fontana, and Massimo Bergamasco	1255

Robotica now accepts submissions via Manuscript Central
