

# Go Mobile

CJO Mobile (CJOm) is a streamlined  
Cambridge Journals Online (CJO)  
for smartphones and other  
small mobile devices

- Use CJOm to access all journal content including *FirstView* articles which are published online ahead of print
- Access quickly and easily thanks to simplified design and low resolution images
- Register for content alerts or save searches and articles – they will be available on both CJO and CJOm
- Your device will be detected and automatically directed to CJOm via: [journals.cambridge.org](http://journals.cambridge.org)

# International Journal of Astrobiology

## Managing Editor

Simon Mitton, University of Cambridge, UK

*International Journal of Astrobiology* is the peer-reviewed forum for practitioners in this exciting interdisciplinary field. Coverage includes cosmic prebiotic chemistry, planetary evolution, the search for planetary systems and habitable zones, extremophile biology and experimental simulation of extraterrestrial environments, Mars as an abode of life, life detection in our solar system and beyond, the search for extraterrestrial intelligence, the history of the science of astrobiology, as well as societal and educational aspects of astrobiology. Occasionally an issue of the journal is devoted to the keynote plenary research papers from an international meeting. A notable feature of the journal is the global distribution of its authors.

# Journal of Fluid Mechanics

## Editor

M. G. Worster, University of Cambridge, UK

*Journal of Fluid Mechanics* is the leading international journal in the field and is essential reading for all those concerned with developments in fluid mechanics. It publishes authoritative articles covering theoretical, computational and experimental investigations of all aspects of the mechanics of fluids. Each issue contains papers on both the fundamental aspects of fluid mechanics, and their applications to other fields such as aeronautics, astrophysics, physiology, chemical and mechanical engineering, hydraulics, meteorology, oceanography, geology, acoustics and combustion.

## Plasma Physics Titles from Cambridge!

*Forthcoming...*

### Plasma Medicine

**Applications of Low Temperature Gas Plasmas in Medicine and Biology**

*Edited by M. Laroussi, M. G. Kong, G. Morfill, and W. Stolz*

The first book dedicated exclusively to plasma medicine for graduate students and researchers in physics, engineering, biology, medicine and biochemistry.

\$120.00: Hardback: 978-1-107-00643-0: 416 pp.

*New in Paperback!*

### Auroral Physics

*Edited by C. I. Meng, M. J. Rycroft, and L. A. Frank*

This volume, which was first published in 1991, presents a comprehensive review of all aspects of the physics of the aurorae australis and borealis. The book is aimed primarily at students and researchers in auroral physics, but will also be of interest to magnetospheric, ionospheric and atmospheric physicists.

\$48.00: Paperback: 978-0-521-15741-4: 518 pp.

### Physics of Radio-Frequency Plasmas

Pascal Chabert *and* Nicholas Braithwaite

Focusing on the physics of low-temperature radio frequency plasmas, for graduate students and researchers in applied physics and electrical engineering.

\$95.00: Hardback: 978-0-521-76300-4: 394 pp.

### Principles of Plasma Physics for Engineers and Scientists

Umran S. Inan *and* Marek Gołkowski

“This new book provides an excellent summary of the basic processes occurring in plasmas together with a comprehensive introduction to the mathematical formulation of fluid (MHD) and kinetic theory. It provides an excellent introduction to the subject suitable for senior undergraduate students or entry-level graduate students.”

*—Richard M. Thorne, University of California at Los Angeles*

\$99.00: Hardback: 978-0-521-19372-6: 284 pp.

*Prices subject to change.*

## Instructions for Authors

**Editorial policy** The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

**Submission of manuscripts** Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Incremental publishing and DOIs** In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; [journals.cambridge.org](http://journals.cambridge.org)) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Proof reading** Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

**Offprints** Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

**Copying** This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2010 \$16.00.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*For all other use*, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

# JOURNAL OF PLASMA PHYSICS

VOLUME 78 • PART 2 • APRIL 2012

## Research Articles

- Stochastic modeling of plasma mode forecasting in tokamak  
*Sh. Saadat, M. Salem, M. Ghoranneviss and P. Khorshid* 99
- Coupled azimuthal modes propagating in current-carrying plasma waveguides  
*V. Girka, I. Girka, I. Pavlenko, O. Girka and A. Girka* 105
- Non-planar dust-acoustic Gardner solitons with two-ion-temperature in a dusty plasma  
*M. Asaduzzaman and A. A. Mamun* 125
- Nonlinear structure of ion-acoustic solitary waves in a relativistic degenerate electron–positron–ion plasma  
*A. Rasheed, N. L. Tsintsadze, G. Murtaza and R. Chaudhary* 133
- Electromagnetic waves in self-gravitating, strongly coupled magnetized degenerate plasma  
*A. A. Mamun, P. K. Shukla and D.A. Mendis* 143
- Dust ion-acoustic solitary structures in non-thermal dusty plasma  
*Animesh Das, Anup Bandyopadhyay and K. P. Das* 149
- Electron drift caused by rf field gradient creates many plasma phenomena: An attempt to distinguish the cause and the effect  
*C. L. Xaplanteris, E. D. Filippaki, I. S. Mistakidis and L. C. Xaplanteris* 165
- Arbitrary amplitude Langmuir solitons in a relativistic electron–positron plasma  
*I. J. Lazarus, R. Bharuthram, S. V. Singh and G. S. Lakhina* 175
- Enhancement in the electromagnetic beam-plasma instability due to ion streaming  
*Nitin Shukla, A. Stockem, F. Fiuza and L. O. Silva* 181
- I-V characteristics and the synthesis of ZnS nanoparticles by glow discharge at the metal–ionic liquid interface  
*T. Abdul Kareem and A. Anu Kaliani* 189
- Paschen curves for metal plasmas  
*K. T. A. L. Burm* 199
- Study on stability and growth rate of the dust acoustic waves in vortex-like ion distribution  
*Shao-Shan Zheng and Yan Chen* 203
