The Journal of the Institute of Navigation

The *Journal* is published quarterly by the Institute and is edited by M. W. RICHEY. It contains original papers contributing to the science of navigation, including those presented at meetings of the Institute together with the ensuing discussion. In addition the *Journal* includes a record of current navigational work, reviews of important books, and other matters of concern to those interested in navigation. The views expressed in the *Journal* are not necessarily those of the Institute, or of any organization or department to which the authors may belong. Crown Copyright may be reserved.

The *Journal* is issued free to all members of the Institute. It is sold to the public at thirty shillings per copy or, by subscription, at one hundred and twenty-five shillings per annum (post free) and may be obtained through all booksellers and John Murray (Publishers) Ltd., 50 Albemarle Street, London W1. Back numbers dated two years prior to the current volume may be obtained from William Dawson & Sons, Ltd., (Back Issues Department), Cannon House, Folkestone, Kent.

Enquiries for advertising space should be addressed to the Institute offices.

The postal address of the Institute is The Institute of Navigation, at The Royal Geographical Society, 1 Kensington Gore, London SW7. (Telephone: 01-589 5021).

Volumes of the *Journal* can be bound for thirty shillings. The parts should be sent to William Clowes & Sons Ltd., Dorland House, 14 & 16 Lower Regent Street, London SW.1.

**What are
you doing
about marine
COLLISION AVOIDANCE?**

DIGILOT (a marine radar aid for automatic anti-collision navigation) does something about it. Digiplot processes signals from conventional radar (either x or s band) and presents it with computed information on a separate screen to give at-a-glance situation appreciation . . . Warns of threatening targets. Plots and displays up to 40 targets using track-ahead method. Instantaneously updates information on clear, flicker-free screen. Gives instant digital reading of range, bearing, course, speed, CPA and time-to-CPA for any selected target. Instant switching permits viewing situation in true or relative plot modes in head up or North up orientation. Trial maneuver capability permits viewing proposed maneuver consequences in speeded up time.

Display of confidence

Confidently, we invite you to see the brightest, clearest radar display. The Kelvin Hughes Series 19. Ask us to show you its ten range scales, from $\frac{1}{2}$ mile to 64 miles. Its improved clutter suppression. Its 3 cm *X band* or 10 cm *S band* operation on 9" or 12" displays – with a range discrimination better than 10 yards (9 metres). For the price, there's nothing to match it.

Ask for a demonstration

To Kelvin Hughes, New North Road, Hainault, Ilford, Essex, England. Please call me to arrange a demonstration of your Series 19 radar.

ROYAL GEOGRAPHICAL SOCIETY

John Bartholomew & Son Ltd., Cartographers of Edinburgh in co-operation with the Royal Geographical Society, London have reproduced the below detailed maps from the Blaeu Atlas Novus published in Amsterdam. Each map is printed on this specially selected antique paper and is presented rolled in an appropriately designed carrying tube. The maps are ideal for framing and the most appropriate style has been found to be the Hogarth black and gold frame which enhances the fine detail of the copper engraved line work and lettering. The paper size is 20" x 24" or 51 cm. x 61 cm.

A Growing Tradition...

Over 15,500 ships of all types and sizes, from the largest super-tankers to small fishing vessels, today rely on Decca for accurate navigation and economical operation. Now more and more ships will benefit even more widely as a result of the extensive new coverage now being set up in Australia, the Baltic, South Africa, Japan and the United States.

We are proud to be associated with the wide variety of famous, and not so famous, ships that have relied on the Decca Navigator since it was first introduced commercially over 20 years ago.

'British Steel' designed by Robert Clark. Built by Philip & Son, Dartmouth. Length 59 ft. Beam 12 ft. 10 ins. Draught 8 ft. Rig: Bermudan Ketch.

'British Steel' goes round the world

Over 50 per cent of the value of Britain's exports are steel or steel-containing goods. Last year BSC itself sold some £200 million worth of products to all parts of the world—a sizeable contribution to the nation's balance of payments—putting BSC among Britain's top four exporters.

To reach its destination British Steel travels by almost every known means, including road, rail, ship and, occasionally, air. And part of the giant Rio Niteroi Bridge in Brazil was recently floated into position across Guanabara Bay.

Now a new journey has begun as 'British Steel'—a specially designed steel yacht—sails round the world, with Chay Blyth (who rowed the Atlantic with John Ridgway in 1966) at the helm, alone. He will be sailing from East to West—against the prevailing winds

and currents. This is the first time that a single-handed, non-stop round trip has been attempted 'uphill'.

Steel was Chay Blyth's own choice for his yacht. "Its unique combination of lightness and toughness makes it the best material for the job", he says. In addition to the hull, most of the boat's fixtures and fittings are steel. So is the rigging and much of the equipment which he will take with him.

'British Steel' sails round the world, close-hauled to windward. And the spirit and challenge of this unique adventure symbolise the new age of British Steel.

Copies of a wall chart (43" x 27") showing the projected route of 'British Steel' are available free. Write to the Information Officer, British Steel Corporation. Allow 14 days for delivery.
