

Instructions to authors

Detailed instructions to authors are available online here:
cambridge.org/core/journals/journal-of-glaciology/information

The *Journal of Glaciology* publishes two types of paper:

- articles on new glaciological findings and theories, or new instruments and methods, or up-to-date, coherent articles reviewing a glaciological subject
- letters of a topical nature, or comments on papers previously published in the Journal

Papers submitted should be:

- of high scientific quality
- complete and clear
- substantially different from previously published work.

Length

Papers should be concise. Lines and pages should be numbered. Papers more than 12 *Journal* pages in length should be cleared with the Chief Editor before submission (one *Journal* page = about 1000 words). Letters are limited to five *Journal* pages.

Original submission

Submit your paper via the *Journal of Glaciology* online submission system at <https://mc.manuscriptcentral.com/jog>

Review process

Your paper will be peer reviewed by at least two reviewers. The Scientific Editor will discuss any alterations required to the paper. The Associate Chief Editor will inform you if and when your paper is accepted for publication. Papers written in poor English will be rejected without review.

You will be sent a proof of your text and illustrations to check and correct (you will have to pay for any substantial alterations made at this stage).

Final submission

The final accepted version of the paper should be in electronic format.

- Acceptable formats are
 - Text (including tables and figure captions) – Word, rtf or LaTeX (the IGS class file should be used; downloadable from the website). Please also supply a final PDF
 - Figures – ideally in tif or eps format (or otherwise in the format in which they were created)
- Responsibility for the accuracy of all data (including references) rests with the authors

Supplementary material

The *Journal of Glaciology* accepts and makes available online appropriate supplementary material. It should be clearly named and labelled and provided in standard file formats.

General points

- Title should be concise
- Abstract should be less than 200 words
- Papers should be divided into numbered sections with short section headings
- Use SI units
- Use internationally recognized systems of abbreviation
- Illustrations should
 - be one or two column widths: up to 85 mm or up to 178 mm
 - not be in boxes
 - use strong black lines (avoid tinting if possible)
 - use SI units in labels
 - use Optima, Arial or a similar sans serif font in labels
- TeX authors: please provide a pdf of the whole paper (text, tables, figures and captions) as well as the individual LaTeX and graphics files
- Equations should
 - be set in MathType or advanced equation editor
 - NOT be embedded as graphics in the text
- Tables should
 - be numbered in Arabic
 - be referred to in text (as Table 1 etc.)
 - NOT be submitted as illustrations
- All citations in text should include the author name(s) and the year of publication (e.g. Smith, 2010; Smith and Jones, 2012; Smith and others, 2014) and must have an entry in the reference list
- Reference lists should
 - be concise
 - be complete and accurate, including doi numbers
 - be provided in precise *Journal* format, including punctuation and emphasis (see past papers for style)
 - be arranged in alphabetical order by first author's surname
 - include works accepted but not published as 'in press'
 - not include personal communications, unpublished data or manuscripts in preparation or submitted for publication (these should be included in the text)

Open Access and page charges

As a gold open access journal, the *Journal of Glaciology* is published without restriction and receives no subscription revenue. The costs of publication are instead covered by an article publishing charge (APC) levied upon the corresponding author, or his/her funding body or institution.

The APC for non-IGS members is £1,200 for a regular article and £600 for a letter.

The APC for IGS members is £1,080 for a regular article and £540 for a letter. The APCs quoted here are correct for 2016.

Upon acceptance for publication the corresponding author will be contacted by Rightslink on behalf of Cambridge University Press, who will administer the collection of the article publishing charge. At that stage the corresponding author can pay by credit card or arrange for an invoice to be issued to his/her funding body or institution. Selected authors may be granted an APC waiver by the IGS. In such cases, a waiver code shall be provided, which should be issued to Rightslink upon receipt of the payment.

Journal of GLACIOLOGY

CONTENTS Vol 64 No 248 2018

855–865 **Identification of multiple natural and anthropogenic sources of dust in snow from Zhongshan Station to Dome A, East Antarctica**
Zhiheng Du, Cunde Xiao, Minghu Ding, Chuanjin Li

866–876 **Environmental record of layers of bubbles in natural pond ice**
Jolana Hrubá, Gunther Kletetschka

877–886 **Impact and implications of meltwater percolation on trace element records observed in a high-Alpine ice core**
Sven Erik Avak, Margit Schwikowski, Anja Eichler

887–896 **Prototype wireless sensors for monitoring subsurface processes in snow and firn**
Elizabeth A. Bagshaw, Nanna B. Karlsson, Lai Bun Lok, Ben Lishman, Lindsay Clare, Keith W. Nicholls, Steve Burrow, Jemma L. Wadham, Olaf Eisen, Hugh Corr, Paul Brennan, Dorthe Dahl-Jensen

897–916 **SHMIP The subglacial hydrology model intercomparison Project**
Basile de Fleurian, Mauro A. Werder, Sebastian Beyer, Douglas J. Brinkerhoff, Ian Delaney, Christine F. Dow, Jacob Downs, Olivier Gagliardini, Matthew J. Hoffman, Roger Leb Hooke, Julien Seguinot, Aleah N. Sommers

917–931 **An optimized method to calculate the geodetic mass balance of mountain glaciers**
Rubén Basantes-Serrano, Antoine Rabatel, Christian Vincent, Pascal Sirguey

932–942 **Ice-rise stratigraphy reveals changes in surface mass balance over the last millennia in Dronning Maud Land**
Vikram Goel, Carlos Martín, Kenichi Matsuoka

943–956 **Simulating climatic mass balance, seasonal snow development and associated freshwater runoff in the Kongsfjord basin, Svalbard (1980–2016)**
Ankit Pramanik, Ward Van Pelt, Jack Kohler, Thomas V. Schuler

957–968 **Reconstructing spatially variable mass balances from past ice extents by inverse modeling**
Vjieran Višnjević, Frédéric Herman, Yury Podladchikov

969–976 **Variations in the surface velocity of an alpine cirque glacier**
J. W. Sanders, K. M. Cuffey, K. R. MacGregor, J. L. Kavanaugh, C. F. Dow

977–989 **Ice thickness measurements of Guliya ice cap, western Kunlun Mountains (Tibetan Plateau), China**
Stanislav Kutuzov, Lonnie G. Thompson, Ivan Lavrentiev, Lide Tian

990–1002 **Soil moisture, wind speed and depth hoar formation in the Arctic snowpack**
Florent Domine, Maria Belke-Brea, Denis Sarrazin, Laurent Arnaud, Mathieu Barrere, Mathilde Poirier

1003–1013 **Using a geochemical method of dissolved and insoluble fractions to characterize surface snow melting and major element elution**
Guangjian Wu, Peilin Li, Xuelei Zhang, Chenglong Zhang

1014–1027 **Characteristics of the deforming bed: till properties on the deglaciated Antarctic continental shelf**
Anna Ruth W. Halberstadt, Lauren M. Simkins, John B. Anderson, Lindsay O. Prothro, Philip J. Bart
