Editor
David C. Brown, Worcester Polytechnic Institute, USA

This journal publishes original articles about significant AI theory and applications based on the most up-to-date research in all branches of phases of engineering. Suitable topics include: analysis and evaluation; selection; configuration and design; manufacturing and assembly; and concurrent engineering.

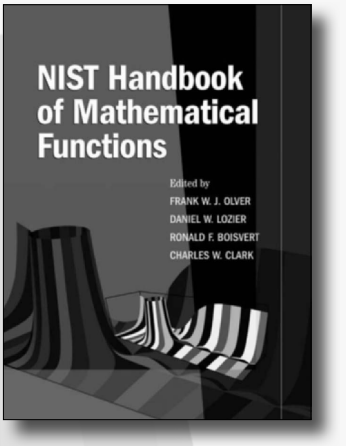
NIST Handbook of Mathematical Functions

Companion to the Digital Library of Mathematical Functions

EDITED BY FRANK W. J. OLVER, DANIEL W. LOZIER, RONALD F. BOISVERT, AND CHARLES W. CLARK



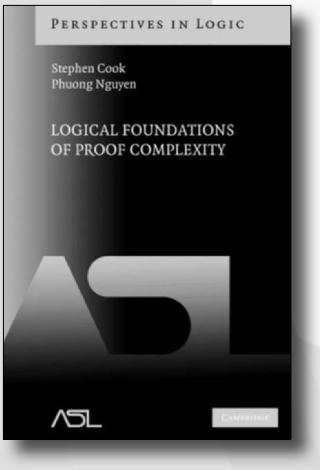
Modern developments in theoretical and applied science depend on knowledge of the properties of mathematical functions, from elementary trigonometric functions to the multitude of special functions. These functions appear whenever natural phenomena are studied, engineering problems are formulated, and numerical simulations are performed. They also crop up in statistics, financial models, and economic analysis. Using them effectively requires practitioners to have ready access to a reliable collection of their properties.

This handbook results from a 10-year project conducted by the National Institute of Standards and Technology with an international group of expert authors and validators. It is destined to replace its predecessor, the classic but long-outdated *NBS Handbook of Mathematical Functions,* edited by Abramowitz and Stegun.

$99.00: Hardback: 978-0-521-19225-5: 966 pp.
$50.00: Paperback: 978-0-521-14063-8

Logical Foundations of Proof Complexity

STEPHEN COOK AND PHUONG NGUYEN



This book treats bounded arithmetic and propositional proof complexity from the point of view of computational complexity. The first seven chapters include the necessary logical background for the material and are suitable for a graduate course. The result is a uniform treatment of many systems in the literature.

$80.00: Hardback: 978-0-521-51729-4: 492 pp.

Prices subject to change.

$50.00: Pb: 978-0-521-14709-5

A Framework for Priority Arguments

Manuel Lerman

This book presents a unifying framework for using priority arguments to prove theorems in computability. This framework isolates many unifying combinatorial principles and uses them to give shorter and easier-to-follow proofs of computability-theoretic theorems. The book is a resource and reference for researchers in logic and computability, helping them to prove theorems in a shorter and more transparent manner.

Lecture Notes in Logic

$75.00: Hb: 978-0-521-11969-6: 176 pp.

Revised [6] Report on the Algorithmic Language Scheme

Edited by Michael Sperber, R. Kent Dybvig, Matthew Flatt, *and* Anton van Straaten

$99.00: Hb: 978-0-521-19399-3: 302 pp.

Programming in Visual Basic 2010
The Very Beginner's Guide

Jim McKeown

"This book provides a great overview of the subject of VB .NET programming. It covers all the important topics in detail and offers plenty of opportunities for readers to try exercises on their own. There are also lots of useful asides that the readers will find interesting; the use of humor keeps the writing engaging and fun. Detailed problems and debugging walkthroughs, which are both thought provoking and complex, assist with the coverage of useful topics such as object-oriented programming, complex data structures, drag-and-drop design, and event handling."

–Rudy McDaniel, University of Central Florida

$150.00: Hb: 978-0-521-89653-5: 784 pp.

Semiotics of Programming

Kumiko Tanaka-Ishii

"As a theory of representation and, thus, of how the human mind models the world through semiosis, the production of signs, semiotics has provided truly remarkable insights into the human condition throughout the ages. This brilliant book takes the semiotic purview one step further, assessing and developing it through the template of computer science, which entails a particular kind of controlled semiosis. This allows Kumiko Tanaka-Ishii, a brilliant semiotician and programmer, to examine semiosis in accurate ways. The result is truly insightful, for both semioticians and computer scientists. But the book goes well beyond these disciplinary domains. It is required reading for anyone interested in how the mind works."

–Marcel Danesi, University of Toronto

$90.00: Hb: 978-0-521-51655-6: 232 pp.
$32.99: Pb: 978-0-521-73627-5

Editor-in-Chief
G. S. Chirikjian, Johns Hopkins University, USA

Robotica is a forum for the multidisciplinary subject of robotics and encourages developments, applications and research in this important field of automation with regard to industry, health, education and economic and social aspects. Coverage includes activities in hostile environments, applications in the service and manufacturing industries, biological robots, on-line robots and various other areas.

Editor-in-Chief
A Bossi, Università Ca' Foscari di Venezia, Italy

Theory and Practice of Logic Programming emphasises both the theory and practice of logic programming. Among the topics covered in this journal are AI applications that use logic programming, natural language processing, knowledge representation, nonmonotic reasoning, databases implementations and architectures and constraint logic programming.

INSTRUCTIONS TO AUTHORS

Scope

Papers may describe original technical work, survey an area, or present a tutorial; and may be either short or long. Anything related to functional programming is of interest, including: *foundations* (semantics, abstract interpretation, lambda calculi, rewriting, logic, type theory, category theory); *implementation* (compilation, architectures, parallelism, garbage collection, I/O, debugging, profiling); *linguistics* (pure and impure language features, non-determinism, side effects, logical variables, relation to other programming paradigms, proofs about programs, program transformation, program synthesis, partial evaluation); *applications* (applications programs, practical experience, programming techniques, prototyping).

Book Reviews

Books for review, or suggestions for reviews, should be sent to the reviews editor, Simon Thompson (address on inside front cover).

Submission of manuscripts

Papers may be submitted to the Editors-in-Chief or any of the editors or directly to JFP-ed@cambridge.org. Please choose an Editor whose research interests most closely match your paper; if in doubt, send your paper to one of the Editors-in-Chief. E-mail and postal addresses for the editors appear on the inside front cover.

Please refer to journals.cambridge.org/JFP for all detailed information associated with the submission of papers to the journal.

Offprints

No paper offprints are provided, but a pdf of the published article will be sent to the corresponding author.

Incremental Publishing and DOIs

The Journal of Functional Programming now publishes articles as First View (at Cambridge Journals Online: journals.cambridge.org) as soon as author corrections have been completed and before they join a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI–the Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. journals.cambridge.org/JFP

SUBSCRIPTIONS

Journal of Functional Programming (ISSN: 0956-7968 print, 1469-7653 electronic) is published in four parts in 2010, January, March, May/July and September/November. The subscription price (excluding VAT) of Volume 20, 2010, is £370 net (USA, Canada and Mexico US$610) institutions print and electronic; institutions electronic only is £310, $500; individuals print only is £99, $165; Member rates available – please enquire; single parts cost £60 net (USA, Canada and Mexico US$120) plus postage. Four parts form a volume in 2010. EU subscribers (outside the UK) who are not registered for VAT should add VAT at their country's rate. VAT registered subscribers should provide their VAT registration number. Orders, which must be accompanied by payment, may be sent to any bookseller, subscription agent or to the publisher: Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 8RU, or in the USA, Canada and Mexico to Cambridge University Press, Journals Fulfillment Department, 100 Brook Hill Drive, West Nyack, New York 10994–2133. Prices include delivery by air where appropriate. Application to mail at periodicals postage rates is pending at New York, NY and at additional mailing offices. Japanese prices for institutions are available from Kinokuniya Company Ltd, P.O. Box 55, Chitose, Tokyo 156, Japan. Postmaster: send address changes in USA, Canada and Mexico to *Journal of Functional Programming*, Cambridge University Press, 100 Brook Hill Drive, West Nyack, New York 10994–2133.

Claims for missing issues should be made immediately on receipt of the subsequent issue.

COPYING

This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA. 01923, USA. Organisations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of $16. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0956-7968/10 $16.

Organisations authorised by the Copyright Licensing Agency may also copy material subject to the usual conditions.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorised to supply single copies of separate articles for private use only.
