Programming via Pascal

Second Edition

J. S. ROHL and H. J. BARRETT

This successful textbook is aimed at anyone learning the Pascal language. The new edition has been entirely re-written, but emphasis on the use of diagrams has been retained.

'An excellent introduction to programming.' *Computer World UK*

Distributed Ada

Developments and Experiences

Edited by JUDY BISHOP

This book presents the proceedings of the Distributed Ada '89 Symposium. It provides a platform for developers and users with experience in distributed and parallel environments to reveal the advantages and difficulties encountered.

£25.00 net HB 0 521 39251 9 329 pp. 1990

The Ada Companion Series

Foundations of Artificial Intelligence

A Sourcebook

Edited by DEREK PARTRIDGE and YORICK WILKS

This outstanding collection is designed to address the fundamental issues or principles underlying the task of Artificial Intelligence. The editors have selected not only papers now recognized as classics but also many specially commissioned papers which together examine the methodological and theoretical foundations of the discipline from a variety of perspectives.

Research and Development in Expert Systems VII

Proceedings of 10th Annual Technical Conference of the BCS Specialist Group, September 1990

Edited by T. R. ADDIS and R. M. MUIR

Three issues are examined in this volume: cybernetics, databases, and programming languages. These issues reflect the ubiquity of expert systems, showing how the methods are helping to expand other areas of technology. It will be essential reading for those who wish to keep up-to-date with developments and opportunities in this field.

British Computer Society Conference Series

SE 90

Proceedings of Software Engineering 90, Brighton, July 1990

Edited by PATRICK A. HALL

The papers presented here look forward to developments during the 1990s and beyond, especially with respect to quality and productivity issues. Topics include: technology forecasts, legal issues, formal methods and software testing, HCI and software engineering, reuse, knowledge-based systems, evaluation of computer systems.

Introducing The Computer Journal

**The international journal of information technology
and computer applications**

*Editor-in-Chief P Hammersley, Middlesex Polytechnic, The Burroughs, Hendon,
London NW4 4BT, UK*

Coverage

The Computer Journal is one of the world's most eminent periodicals in the field of information technology and computer applications. Its coverage is unmatched by any other computing periodical. It includes advanced programming, computer science theory, databases, hardware and logic design and business applications. It also covers the newer disciplines such as parallel computing, object-oriented programming, logic programming and electronic publishing. Papers are always in the mainstream of new developments; their results are significant and far reaching; above all they are readable.

Type of Articles Published

The Computer Journal publishes original research papers, practical accounts of the latest developments and their likely impact, shorter communications, correspondence about recently published articles, and review articles.

The quality and scope of The Computer Journal can be seen from just a selection of recent and forthcoming articles. Send for a free sample copy and see for yourself!

Subscription information

The Computer Journal (ISSN 0010-4620), Volume 34: February, April, June, August, October and December 1991. £174 for UK subscribers, £185 for subscribers elsewhere.

A NEW journal in the applications of categorical,
algebraic and geometric methods in Computer Science

Mathematical Structures in Computer Science

Why a new journal?

Mathematical Structures in Computer Science (MSCS) is a new journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from algebra, geometry or category theory form a basis for the work. MSCS is distinct from existing titles in that it specialises in the art of applying mathematics of genuine interest and general applicability to computer science; its objective is to promote the useful application of high level mathematics to language design and software implementation. The journal will increase the circulation of new results in this fast growing area.

The Principles of Computer Networking

D. RUSSELL

This new textbook about an immensely important area, puts emphasis on understanding fundamental principles rather than specific systems which may rapidly become out of date. The book ranges from systems linked by telephone lines to tightly coupled networks of processors.

£45.00 net Hard covers 0 521 32795 4 513 pp. 1989

New Series

Cambridge Series on Human-Computer Interaction

This new series will reflect the diversity of disciplines interested in HCI, from software engineering to psychology, sociology, ergonomics, AI and education. It will contain books at graduate level and above, as well as some undergraduate texts.

Cognitive Ergonomics and Human-Computer Interaction

Edited by J. LONG and A. WHITEFIELD

The first book in this new series provides detailed reports of a number of long-term research projects. It discusses substantial empirical investigations, rather than being a summary of specific areas or theoretical speculations.

£27.50 net Hard covers 0 521 37179 1 288 pp. 1989

Cambridge Series on Human-Computer Interaction 1

Science and Reform

Selected Works of Charles Babbage

Edited by ANTHONY HYMAN

This book contains carefully selected passages from the diverse publications of a key figure in the history of computing. It is a fascinating tribute to the relentless spirit of inquiry of the founding father of the computer.

£37.50 net Hard covers 0 521 34311 9 363 pp. 1989

Research and Development in Expert Systems VI

Edited by N. SHADBOLT

This volume contains papers from Expert Systems '89, held with the theme of 'Applications and Methods in Knowledge Based Systems'. The papers describe practical applications in finance and industry as well as important theoretical work.

£35.00 net Hard covers 0 521 38477 X 320 pp. 1989

British Computer Society Workshop Series

Now in paperback

Efficient Parallel Algorithms

A. GIBBONS and W. RYTTER

This self-contained introduction to efficient parallelisation presumes no special knowledge of parallel computers or particular mathematics. The approach concentrates on the essence of algorithmic theory, and on determining and taking advantage of the inherently parallel nature of certain types of problem.

£14.95 net Paperback 0 521 38841 4 267 pp. 1990

Information Technology

Agent of Change

MURRAY LAVER

This is a non-technical assessment of IT and its influence on people and communities. It provides a realistic overview, steering a middle course between rosy utopias and bleak apocalyptic nightmares.

£9.95 net Paperback 0 521 35925 2

Raster Imaging and Digital Typography

Edited by J. ANDRÉ and R. HERSCH

These papers present the most recent developments, including curve fitting, shape manipulation, character design, and representation and page-description languages.

£32.50 net Hard covers 0 521 37490 1 250 pp. 1989

Cambridge Series on Electronic Publishing

Graphic Tools for Software Engineers

Edited by A. KILGOUR and R. EARNSHAW

This book considers the development of graphical aids for software engineers, the construction of user interfaces by graphical and textual interaction, and the display of program behaviour during its execution.

£22.50 net Hrd covers 0 521 37221 6 126 pp. 1989

British Computer Society Workshop Series

People and Computers V

Edited by A. SUTCLIFFE and L. MACAULAY

This book presents the proceedings of the major international conference, HCI '89. The book's themes are: the theoretical basis and methodical practice of HCI; the integration of HCI with other disciplines; and the industrial relevance of HCI. It represents a comprehensive guide to current research in the field.

INSTRUCTIONS TO AUTHORS

Scope

Papers may describe original technical work, survey an area, or present a tutorial; and may be either short or long. Anything related to functional programming is of interest, including: *foundations* (semantics, abstract interpretation, lambda calculi, rewriting, logic, type theory, category theory); *implementation* (compilation, architectures, parallelism, garbage collection, I/O, debugging, profiling); *linguistics* (pure and impure language features, non-determinism, side effects, logical variables, relation to other programming paradigms, proofs about programs, program transformation, program synthesis, partial evaluation); *applications* (applications programs, practical experience, programming techniques, prototyping).

Submission of manuscripts

Papers may be submitted to any of the editors. Four copies should be sent, accompanied by the author's mailing address, telephone number and, if possible, an electronic mailing address. Papers should not be submitted in the same form elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

Layout of Manuscripts

Papers should be type-written or type-set in double spacing throughout, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words.

Illustrations

Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions for figures should be attached separately.

Proof reading

Please submit papers in their final form. Typographical or factual errors only may be changed at the proof stage. Authors may be charged for correction of non-typographical errors. No page charge is made.

References

The Harvard system of references will be used in order to make alterations easier. Papers should be referred to in the text by author's surname and year of publication and listed in alphabetical order at the end of the main text. Please include the article's title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the World List of Scientific Periodicals (4th Edn); volume number (underlined); inclusive page numbers.

Offprints

25 offprints of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher.

Please contact the editors for clarification of any of the above points.

COPYING

This journal is registered with the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970. Organisations in the USA who are also registered with the C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per-copy fee of \$5.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0956-7968/91 \$5.00 + .00.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorised to supply single copies of separate articles for private use only.

For all other use, permission should be sought from Cambridge or the American branch of Cambridge University Press.
