THE
**JOURNAL OF LARYNGOLOGY,
 RHINOLOGY, AND OTOTOLOGY:**

A RECORD OF CURRENT LITERATURE

RELATING TO

THE THROAT, NOSE, AND EAR.

Printed and Published Monthly by

ADLARD & SON & WEST NEWMAN, Ltd., Bartholomew Close, London, E.C. 1.

A SAFE JUNKER'S INHALER

As made for MORRIS RIGBY, M.R.C.S., L.R.C.P.Lond., Capt., R.A.M.C.T.,
 Anæsthetist, Sussex County Hospital, and 2nd Eastern
 General Hospital, Brighton.

Can be used with safety in darkened rooms for Laryngological Operations, etc.

Rigby's Chloroform Inhaler complete in case	£3 8s. 3d.
Rigby's Chloroform Bottle only	£1 5s. 0d.

GRANDS PRIX:

Paris 1900, Brussels 1910, Buenos Aires 1910.

Gold Medal Allahabad 1910.

**Manufactured by
 DOWN BROS., LTD.,**

Surgical Instrument Makers.

ENTERED AT STATIONERS' HALL.

“We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions.”—*British Medical Journal*, May 3, 1890.

LISTERINE

*A safe, non-poisonous, unirritating
antiseptic solution*

LISTERINE is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle, or douche, in catarrhal conditions of the nose and throat.

LISTERINE in proper dilution may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

LISTERINE embodies a two-fold antiseptic effect, in that after the evaporation of its volatile constituents—thyme, eucalyptus, mentha, gaultheria, and ethyl alcohol—a film of boracic and benzoic acids remains upon the surface to which Listerine has been applied, affording more prolonged antiseptic protection.

LISTERINE is a trustworthy surgical dressing; it has no injurious effect upon the tissues in which the healing process is going on.

LISTERINE in teaspoonful doses will often afford relief in fermentative dyspepsia, and is largely prescribed, with excellent results, in the various forms of diarrhœa occurring in infants and adults.

LISTERINE literature, including special pamphlets upon *Respiratory Diseases*, may be had, by physicians, upon application to

PNEUMONIA PHYLACOGEN

(The name "Phylacogen" distinguishes the modified Bacterial Derivatives manufactured by Parke, Davis & Co., according to the process of Dr. A. F. Schafer).

Supplied in vials of 10 c.c., also in cases of 5 ampoules of 1 c.c.

The therapeutic use of Pneumonia Phylacogen is based on the theory of multiple infections.

Pneumonia Phylacogen is a sterile aqueous solution of bacterial derivatives from cultures of the *Diplococcus pneumoniae* (Weichselbaum, Fränkel) and other organisms which are likely to play a part as complicating agents in a case of pneumonia, e.g., *Staphylococcus pyogenes*, *Streptococcus pyogenes*, *B. pyocyaneus*, *B. coli communis*, etc.

The subcutaneous injection of Pneumonia Phylacogen is indicated in the treatment of any pathological condition caused by the pneumococcus. The earlier it is administered in a case, the more certain is the avoidance of complications.

Reports from English practitioners show that it is rarely necessary to give more than four injections of 0.5 to 1 c.c. each, in order to bring down the temperature. Of 21 cases recently reported there was only one death—a case in which the pneumonia was complicated with mitral disease.

Apart from the fact that Pneumonia Phylacogen is often remedial in severe cases which have not responded to customary treatment, its use in comparatively mild cases usually brings about recovery in one-third to one-half of the time required by the best of other treatments.

THIS year's volume aims, like its predecessors, to be a faithful reflex of current Medical and Surgical thought. It is, therefore, of necessity coloured by the consideration of the many new problems which are thrust upon us by the War. These problems will confront the general Practitioner on every hand, and he must be prepared to deal with them.

Hence the current volume has a unique value, in that it furnishes the reader with a careful review of the latest achievements in War Surgery and Medicine, which will be of value now and in the years to come, and which cannot be obtained from any other source.

The civil side of the Practitioner's work has, of course, not been neglected.

The new "Annual" continues to be, as in the past, a digest of the best modern teaching culled by experts from the medical literature of the world.
