CONTENTS

| | PAGE |
|--|------|
| Allen, J. F. and Reekie, J. Momentum transfer and heat flow in liquid helium II | 114 |
| Band, William and Ch'eng, Henry L. C. A critical examination of the Benedicks homogeneous thermoelectric effect | 622 |
| Barkla, H. M. and Shire, E. S. The heating of iron ammonium alum by alternating magnetic fields at very low temperatures | 327 |
| Bartlett, M. S. A note on tests of significance in multivariate analysis | 180 |
| Bath, F. On circles determined by five lines in a plane | 518 |
| Bennett, G. T. Continuants and precontinuants | 548 |
| Blackett, P. M. S. and Williams, F. C. An automatic curve follower for use with the differential analyser | 494 |
| Bratt, J. B., Lennard-Jones, J. E. and Wilkes, M. V. The design of a small differential analyser | 485 |
| Campbell, Norman. The fluctuation theorem. (Shot effect) | 127 |
| Carslaw, H. S. and Jaeger, J. C. A problem in conduction of heat | 394 |
| Chalmers, J. Alan. Note on the calculation of the Peltier effect | 521 |
| Chang, T. S. The number of configurations in an assembly and cooperative phenomena | 265 |
| — Superlattice formation of the type <i>AB</i> in an adsorbed layer | 70 |
| Ch'eng, Henry L. C. and Band, William. A critical examination of the Benedicks homogeneous thermoelectric effect | 622 |
| Corben, H. C. The uncertainty of the reference frame in quantum mechanics | 195 |
| — and Massey, H. S. W. Elastic collisions of mesons with electrons and protons | 463 |
| — — The emission and absorption of heavy electrons | 84 |
| Curran, S. C. and Petržílka, V. Methods of construction of Geiger-Mueller counters and their use in coincidence experiments | 309 |
| — and Strothers, J. E. Photoemission in Geiger-Müller counters | 654 |
| Dean, W. R. Note on the slow motion of fluid | 27 |
| Dickinson, D. R. On the derivation of discontinuous functions | 373 |
| Dirac, P. A. M. A new quotation for quantum mechanics | 416 |
| Eddington, Sir Arthur. Lorentz-invariance in quantum theory | 186 |
| Erdős, P. On the easier Waring problem for powers of primes. II | 149 |
| Fuchs, K. On the stability of nuclei against β -emission | 242 |
| Goldstein, S. A note on the boundary layer equations | 338 |

| | |
|---|-----|
| Goodwin, E. T. Electronic states at the surfaces of crystals. I. The approximation of nearly free electrons | 205 |
| — Electronic states at the surfaces of crystals. II. The approximation of tight binding: finite linear chain of atoms | 221 |
| — Electronic states at the surfaces of crystals. III. The approximation of tight binding: further extensions | 232 |
| — Electronic states at the surfaces of crystals. IV. The activation of adsorbed atoms by surface electrons | 474 |
| Grünwald, Géza. Zur Summabilitätstheorie der Fourierschen Doppelreihe | 343 |
| Hardy, G. H. A note on a differential equation | 652 |
| Harvey, A. F. The cut-off characteristic of the single anode magnetron | 637 |
| Hoyle, F. Quantum electrodynamics. I | 419 |
| — Quantum electrodynamics. II | 438 |
| — and Lyttleton, R. A. The effect of interstellar matter on climatic variation | 405 |
| — — The evolution of the stars | 592 |
| Hsu, P. L. A new proof of the joint product moment distribution | 336 |
| Jaeger, J. C. and Carslaw, H. S. A problem in conduction of heat | 394 |
| Jánossy, L. The exchange force between three heavy particles due to the meson exchange field | 616 |
| Jeffreys, Harold. The minimum χ^2 approximation | 520 |
| Johnston, J. E. The fine structure of the X-ray absorption edges of aluminium and zinc | 108 |
| Lawrance, Miss A. M. The production of ${}^2\text{Li}$ by bombardment of boron with neutrons | 304 |
| Lee, E. and Sutherland, G. B. B. M. A peculiarity in the infra-red absorption spectrum of germane | 341 |
| Lennard-Jones, J. E., Wilkes, M. V. and Bratt, J. B. The design of a small differential analyser | 485 |
| Littlewood, J. E. and Offord, A. C. On the number of real roots of a random algebraic equation. II | 133 |
| Lyttleton, R. A. and Hoyle, F. The effect of interstellar matter on climatic variation | 405 |
| — — The evolution of the stars | 592 |
| McCrea, W. H. On the representation of Eddington's E -numbers by matrices | 123 |
| Macpherson, R. E. Canonical systems on a reducible variety | 389 |
| Maitland, B. J. A note on functions regular and bounded in the unit circle and small at a set of points near the circumference of the circle | 382 |

| | |
|---|-----|
| Marrack, P. E. Notes on the two-centre problem in wave mechanics. I. The hyperbolic nodes of the wave equation | 44 |
| Massey, H. S. W. and Corben, H. C. Elastic collisions of mesons with electrons and protons | 463 |
| — — — The emission and absorption of heavy electrons | 84 |
| Miller, A. R. and Roberts, J. K. The application of statistical methods to immobile adsorbed films | 293 |
| Misener, A. D. Current effects in cylindrical superconductors | 95 |
| Murrell, Miss E. B. M. and Smith, C. L. The disintegration of the separated isotopes of boron under proton and deuteron bombardment | 298 |
| Offord, A. C. and Littlewood, J. E. On the number of real roots of a random algebraic equation. II | 133 |
| Peierls, R. Critical conditions in neutron multiplication | 610 |
| Petržilka, V. and Curran, S. C. Methods of construction of Geiger-Mueller counters and their use in coincidence experiments | 309 |
| Rankin, R. A. Contributions to the theory of Ramanujan's function $\tau(n)$ and similar arithmetical functions. I. The zeros of the function $\sum_{n=1}^{\infty} \frac{\tau(n)}{n^s}$ on the line $\Re s = \frac{1}{2}$ | 351 |
| — Contributions to the theory of Ramanujan's function $\tau(n)$ and similar arithmetical functions. II. The order of the Fourier coefficients of integral modular forms | 357 |
| Reekie, J. and Allen, J. F. Momentum transfer and heat flow in liquid helium II | 114 |
| Rideal, E. K. A note on a simple molecular mechanism for heterogeneous catalytic reactions | 130 |
| Roberts, J. K. and Miller, A. R. The application of statistical methods to immobile adsorbed films | 293 |
| Rogosinski, Werner. On subordinate functions | 1 |
| Semple, J. G. Base conditions and covariant systems in an algebraic threefold | 166 |
| Shire, E. S. and Barkla, H. M. The heating of iron ammonium alum by alternating magnetic fields at very low temperatures | 327 |
| Slater, N. B. The rates of unimolecular reactions in gases | 56 |
| Smith, C. L. and Murrell, Miss E. B. M. The disintegration of the separated isotopes of boron under proton and deuteron bombardment | 298 |
| Spencer, D. C. On a Hardy-Littlewood problem of diophantine approximation | 527 |
| Steen, S. W. P. Introduction to the theory of operators. IV. Linear functionals | 562 |
| Strothers, J. E. and Curran, S. C. Photoemission in Geiger-Müller counters | 654 |

| | PAGE |
|---|------|
| Sutherland, G. B. B. M. and Lee, E. A peculiarity in the infra-red absorption spectrum of germane | 341 |
| Temperley, H. N. V. Time effects in the magnetic cooling method | 256 |
| Todd, J. A. A remark on a theorem of Severi | 516 |
| Ward, A. G. The half-value period of ^{14}N | 523 |
| — The γ -rays of ionium | 322 |
| Wilkes, M. V., Bratt, J. B. and Lennard-Jones, J. E. The design of a small differential analyser | 485 |
| Williams, E. J. Note on the sensitive time of a Wilson expansion chamber. | 512 |
| Williams, F. C. A reversible head for the automatic curve following device | 506 |
| — and Blackett, P. M. S. An automatic curve follower for use with the differential analyser | 494 |
| Yates, F. An apparent inconsistency arising from tests of significance based on fiducial distributions of unknown parameters | 579 |
| Yoxall, A. L. Note on a paper by J. A. Todd | 125 |

PLATES

DISCOVERY

in Physics

The Cambridge Physical Tracts are up-to-date reports from research workers in fields where progress is particularly rapid and where a complete study is not yet possible. About a dozen of these tracts are in preparation and the five following have already appeared.

1. **NEGATIVE IONS** by H. S. W. MASSEY. 6s.

An account of recent research, by experiment and the application of quantum theory, into the nature and properties of negative ions.

2. **THE MOBILITY OF POSITIVE IONS IN GASES**
by Professor A. M. TYNDALL. 6s.

The story of recent work in the H. H. Wills Physical Laboratory at Bristol, why it was undertaken and with what results.

3. **SUPERCONDUCTIVITY** by D. SHOENBERG. 6s.

No satisfactory theory of metals, which will explain the phenomenon of superconductivity, has yet been formulated. The work described here makes it clear what any such theory will have to explain.

4. **ELECTRON OPTICS** by the Research Staff of Electric and Musical Industries Ltd., compiled and edited by OTTO KLEMPERER. 6s.

A concise account of the principles and methods of geometrical electron optics, and its technical applications to television and electron microscopy.

5. **COSMIC RAYS AND MESOTRONS** by H. J. J. BRADDICK. 5s.

The first chapters of this Tract are devoted to the experimental facts of cosmic rays, and the latter to their exploration in terms of the properties predicted by quantum theory for moving charged particles.

All prices are net
