

# RAMANUJAN CONGRUENCES FOR $p_{-k}(n)$ : CORRIGENDUM

A. O. L. ATKIN

The value of  $\alpha(24, 2)$  in Theorem 1 should be 0, not 3, as is easily seen from the analysis of § 3.1. This error was exposed by a manuscript, "Congruences of the Ramanujan-Watson type", which I received from T. Hjelle and Ø. Rødseth of Bergen, Norway, after the above paper had gone to press.
