THE CULTIVATION OF PARASITES *IN VITRO*

ANGELA E. R. TAYLOR, B.S.C., PH.D., M.I.BIOL.
and J. R. BAKER, B.S.C., PH.D., M.I.BIOL.
392 pages, 16 illustrations. 70s.

This book is primarily designed as a laboratory handbook for workers interested in the cultivation of animal parasites *in vitro*. The subjects covered include a section on general cultivation techniques followed by reviews of the methods for culturing Protozoa, Platyhelminths, Nematodes (parasitic in animals only) and Acanthocephala. Teachers interested in demonstrating the cultivation of parasites will find practical details of the more successful and important techniques. In addition much of the relevant literature has been reviewed so that research workers may use the book as a starting point in this rapidly advancing field.

IMMUNITY TO PARASITES

Sixth Symposium of the British Society for Parasitology, edited by ANGELA E. R. TAYLOR, B.S.C., PH.D., M.I.BIOL. 128 pages, 10 illustrations. 37s. 6d.

The contributions cover the various aspects of immunity in diseases caused by Protozoa and Helminths. The programme of the symposium afforded a much needed opportunity for immunologists and parasitologists to exchange their views. After an introduction by J. H. Humphrey the eight papers cover Immunity (*R. R. A. Coombs*); Immunity to Tissue Protozoa (*F. E. G. Cox*); Acquired Immunity to Blood Parasitic Protozoa (*G. A. T. Targett*); Immunity to the *Eimeria* (*M. E. Rose*); Immunity to Intestinal Helminths: The 'Self-Cure' Reaction (*W. Mulligan*); Immunity to Blood Helminths (*S. R. Smithers*); Immunity to Helminths Associated with the Tissues (*J. F. Michel*); The Application of Immunology to Helminth Diseases (*R. J. Terry*).

Helminths, Arthropods and Protozoa of Domesticated Animals

the 6th Edition of Mönning's
Veterinary Helminthology
and Entomology

by E. J. Soulsby *Chairman, Department of Veterinary Pathobiology, School of Veterinary Medicine, University of Pennsylvania.*

For the new edition of this standard text, considerable revision has been necessary and an entirely new section on protozoa is included for the first time. As before emphasis is given to the diagnosis and treatment of the common parasitic diseases.

848 pages 38 plates and 290 figures
in text. 84s.

BULLETIN OF ENTOMOLOGICAL RESEARCH

Published quarterly and containing original articles on economic entomology. *Post free.*

Annual subscription (payable in advance) 150s. *od.*

Prices of back parts and volumes on application.

REVIEW OF APPLIED ENTOMOLOGY

Consisting of abstracts or reviews of current literature on economic entomology throughout the world. Published monthly in two series:

Series "A" dealing with insect and other arthropod pests of cultivated plants, forest trees and stored products of animal and vegetable origin.

Series "B" dealing with insects, ticks, etc. conveying disease or otherwise injurious to man and animals. *Post free.*

Series "A" Series "B"

Annual subscription (payable in advance) 180s. *od.* 80s. *od.*

Prices of back parts and volumes on application.

ZOOLOGICAL RECORD, part INSECTA

Published annually and containing as complete a record as possible of the literature of the previous year, chiefly from the systematic standpoint.

Annual subscription 130s. *od. Post free.*

Prices of back volumes on application.

NOTES FOR CONTRIBUTORS

CONTRIBUTIONS will be welcomed from scientists of all nationalities, but must be written in English. Papers should be sent to the Editor, Dr P. Tate, The Molteno Institute, Downing Street, Cambridge.

GENERAL. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers published in *Parasitology* may not be reprinted or published in translation without permission from the Editorial Board. Papers should be as concise as clarity permits, and illustrations kept as few as possible. Attention to the following instructions will assist rapid publication:

TYPESCRIPTS. Papers should be typewritten with double spacing, on one side only of quarto paper, leaving a margin of about 4 cm. on the left-hand side of each sheet. Sheets should be numbered consecutively. Heavily corrected typescripts may have to be returned to the author for retyping. Papers should state the name of the author and the address to which proofs are to be sent. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper. A short title, not exceeding 44 letters, should be supplied for running headlines.

The general arrangement of the paper should be as follows: Introduction; Methods; Results; Discussion; Summary of results; References. Tables, explanations of text-figures or plates, and keys to the abbreviations used on figures should be on separate sheets (see below).

PLATES should only be included where they are absolutely essential, as in the reproduction of photomicrographs and similar illustrations demanding very fine detail. Plates are expensive and authors may be required to bear part of the cost if an unduly large number is required. Photographs should be sharp glossy prints, trimmed and mounted on white card and grouped and numbered as they are required to appear in print (overseas contributors may prefer to submit unmounted prints with a sketch to indicate the proposed grouping, in order to reduce postage costs). Please remember that the area of a group cannot exceed 20 by 12.5 cm., after reduction (if any). Lettering is best indicated on an overlay or separate sketch.

TEXT FIGURES should not be more than about twice the size of the finished block, and the thickness of lines and size of points, stipples, etc. determined accordingly. The maximum size of any one group of figures, after reduction, is 20 by 12.5 cm. They must be drawn in Indian ink on white Bristol Board, heavy drawing paper, tracing paper or tracing linen; graph paper ruled in pale blue (but not other colours) is also acceptable. Explanatory lettering should be lightly inserted in blue pencil, with tally lines showing the position of the feature to which it refers, so that the printer may put in the finished lettering. Properly prepared scraperboard drawings may be suitable for reproduction as line drawings, but drawings with gradations of shading (e.g. washdrawings) are not. Please try to avoid creasing or folding illustrations. Legends to illustrations must be given on a separate sheet of paper, but scales of magnification are preferably given alongside the illustrations. Each illustration must have the name of the author and figure number pencilled on the back. Plates and

diagrams should be numbered separately and their approximate positions indicated in the margin of the typescript. It is very convenient if photographs of illustrations are sent with the papers in addition to the original figures; they are essential when the originals are very large, so that they may be sent through the post to referees.

TABLES should be kept to a minimum and the duplication of information in tables and graphs avoided. They should be typed on separate sheets of paper and their approximate positions indicated in the margin of the typescript. Each table should be numbered and be designed to be printed in the normal orientation of the text with the data so grouped as to make the use of rules unnecessary, whenever possible.

NOMENCLATURE. Authors should follow the *International Rules of Nomenclature* in the names of organisms. When new names are introduced the recommendations of the *International Code of Zoological Nomenclature*, 1964, should be strictly adhered to, especially with regard to the designation of types and statements as to where such types are deposited.

REFERENCES should be given only when cited in the text and should be listed in alphabetical order at the end of the paper, in the following form:

Surname of author(s), initials; year of publication; title of paper; title of journal (abbreviated according to the *World List of Scientific Periodicals*, 1963-5 ed., and underlined); volume number; first and last page numbers of the work cited. When books are listed, the title of the book should be underlined and it should be followed by the town of publication and the name of the publisher.

Where there is more than one reference to a particular author or group of authors with the same date, references should be distinguished by letters placed after the date, the letter *a* being used for the first reference cited and so on.

PROOFS sent to authors are already in page form and only essential corrections should be made on them. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author; they are in any case liable to delay publication. Correction should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958 (British Standards Institution, 2 Park Street, London, W. 1). After correction, the printers' marked proof should be returned to the Editor.

OFFPRINTS. Fifty offprints of each paper are provided free of charge. Additional offprints may be ordered on the form sent out with proofs, provided this is returned within seven days of receipt.

MORE DETAILED INFORMATION on the preparation of manuscripts for publication is to be found in the following:

NUTTALL, G. H. F. (1940). Notes on the Preparation of Papers for Publication in the *Journal of Hygiene* and in *Parasitology*, *Parasitology* 32, 1-62 and *J. Hyg.* 40, 1-62. (Now out of print and also out of date in some respects.)
