

The Journal of Child Psychology and Psychiatry and Allied Disciplines

Official Organ of the Association for Child Psychology and Psychiatry

Joint Editors: **L.A. HERSOV**, *The Maudsley Hospital, London*
M. BERGER, *University of London Institute of Education*

Corresponding Editors: **L. EISENBERG**, *Children's Hospital Medical Center, Boston, Massachusetts, USA*
N. GARMEZY, *University of Minnesota, USA*

Primarily concerned with child psychology and psychiatry, this journal includes experimental and development studies. An important function of the journal is to bring together interdisciplinary contributions so that more is known about the mental life and behaviour of children. The journal has an international readership and publishes original papers, review articles, book reviews and items of information.

Some Articles Appearing in the Journal:

BONNIE BATTER and **CHRISTINE ABRAMOWITZ**
Wariness of Strangers: Reality or Artifact?

MARTIN HUGHES, **BARBARA TIZARD**, **HELEN CARMICHAEL** and **GILL PINKERTON**
Recording Children's Conversations at Home and at Nursery School: A Technique and Some Methodological Considerations

SUSAN CAMPBELL and **STANA PAULASKAS**
Peer Relations in Hyperactive Children
FRED VOLKMAR and **ALBERTA SIEGAL**
Young Children's Responses to Discrepant Social Communications
This journal is published quarterly.
Annual subscription (1980) **US\$72.00**

The Behavioral and Brain Sciences

An International Journal of Current Research and Theory
with Open Peer Commentary

Edited by STEVAN HARNAD

The Behavioral and Brain Sciences provides an opportunity for an interesting form of scientific communication among researchers in all areas of psychology, neuroscience, behavioural biology and cognitive science. Original articles (and occasionally also précis of recent books or previously published articles) appear simultaneously with commentaries from fifteen, twenty or more of the authors' peers from across the spectrum of BBS disciplines, and the authors' replies to these commentaries.

Continuing commentary and replies are carried over to subsequent issues.

Recent and forthcoming articles include:

H.J. EYSENCK The conditioning model of neurosis *with commentary*

R.K. DISMUKES New concepts of molecular communication among neurons *with commentary*

N. CHOMSKY Rules and representations *with commentary*

J. McGLONE Sex differences in human brain organisation *with commentary*

Volume 3 (1980): £40.00 for institutions, £18.50 for individuals*

Volumes 1-3 (1978-1980): £100.00 for institutions, £60.00 for individuals*

*Individuals must order direct from the Press and certify that the subscription is for their personal use only. Payment should accompany the order.

New books from CAMBRIDGE

Language Acquisition

Studies in First Language Development

Edited by PAUL FLETCHER and MICHAEL GARMAN

The contributions to this volume have been written by specialists in different aspects of the field, and arranged to give an understanding first of the sequence of development of language, and then of the wider framework of child development. Editorial introductions focus on the main issues and highlight areas both of consensus and debate.

A Functional Approach to Child Language

A Study of Determiners and Reference

ANNETTE KARMILOFF-SMITH

Language-acquisition is a form of problem solving, for the child must learn that many words have more than one function and that there are several different means by which each function can be expressed. This study is based upon the author's experiments designed to analyse the functions children confer on referential expressions, and to trace the child's progressive construction of systems of plurifunctional markers.

Studies in the Acquisition of Deictic Terms

CHRISTINE TANZ

Language is spoken at a particular time, in a particular place, by a particular person; and certain words, the deictic terms, can only be fully defined by recourse to this extra-linguistic content. Dr Tanz's investigations of children's acquisition of deictic distinctions lead to a number of important methodological insights, and are the basis of a broad discussion of semantic development.

Learning to Talk

JOHN McSHANE

Dr McShane argues convincingly that language development is the product of intentional communication between a child and other people. He shows that limited, but effective, communication is possible in the absence of words, and then traces the genesis of communication through the one-word stage to the development of grammatically structured utterances.

Introduction to Language Pathology

David Crystal

The 1970s have seen the study of communication disorders at an important transitional stage in its development. New degree courses at undergraduate and postgraduate levels have broadened the academic basis of training in the subject; and there have been considerable advances in investigative techniques, which have produced enormous amounts of fresh data. But most of all there has developed a new critical awareness of the limitations of the traditional categories, nomenclature and practices involved in the study of handicap in general, and of speech disorders in particular. It is an intellectually stimulating and clinically rewarding time. But for the new student of the subject, the excitement and stimulation is often somewhat diminished, as he or she struggles to master the competing traditions, techniques and terminologies.

Professor Crystal's aim in writing this book is to reduce the confusion regularly admitted by people who encounter the field of communication disorders for the first time. He provides a general view of the field which enables the student to interrelate the main components of study; and a concise introductory account of each of these components to enable the student to see their role in clinical investigation.

Language and Disadvantage

Studies in Language Disability and Remediation 5

John R. Edwards

The book deals with the central notion of 'disadvantage' in speech and language, principally as it affects school-age children. It discusses the causes of such disadvantage, the theories and misconceptions surrounding this area, and the effects in terms of learning ability and socialization.

The author treats the problems of disadvantaged speakers as essentially a sociolinguistic issue, although he does not assume that the difficulties faced by such speakers are any the less real or important if they derive from social attitudes to speech rather than from linguistic deficiency itself. Indeed, problems whose existence depends upon prevailing social norms are among the most intractable. Throughout the book the work of therapists, teachers and others directly concerned with the problems of the disadvantaged speaker is considered. The purpose of the book, however, is not to suggest a 'cure' for disadvantaged speech, since the author argues that any 'solution' to the problem must lie, in the long term at least, in the moderation or eventual elimination of prejudicial attitudes towards certain speech styles. The author has aimed at providing a balanced and detailed overview for those concerned with this vexed but crucial question.

NOTES FOR CONTRIBUTORS

Papers, notes and reviews should be sent to Prof. D. Crystal, Department of Linguistic Science, University of Reading, Whiteknights, Reading, Berkshire, England. They should normally be written in English. Major articles should not exceed twenty printed pages.

Three copies of the typescript should be submitted, one of which should be the top copy. Contributions should be clearly typed with double spacing, on one side of the paper only, using a conventional size of paper, preferably A4 (or 21.6 by 28 cm). Authors should hold one copy for correction of proofs. Footnotes, which should be as few as possible, should be listed, double spaced, on a separate sheet at the end of the article. Line diagrams, which should also be kept to a minimum, may be left in the text, but should be numbered independently of examples of utterances, et. The title-page should include the title, author's name and affiliation, together with the address to which proofs are to be sent. Titles should be so worded that the first part may be used as a running headline (with a maximum length of 50 characters, including spaces). An abstract of the article (max. 120 words) should be typed on a separate sheet. Chronological age should be stated in years, months and (where needed) days as follows: 4; 5.17.

Cited forms should be underlined to represent italicization in print. Translational 'meanings' should be placed within single quotation marks. Emphasis should be marked by the use of small capitals. Phonetic transcriptions should, wherever possible, employ the symbols and conventions of the IPA; they must never be used in footnotes, and should in no case be narrower than absolutely necessary for the purpose.

References are to be made in the text thus: (Neisser 1967: 222). If the author's name is part of the text, the following form should be used: 'Piaget (1967: 131) in-

vestigates...'. When a work written by three or more authors is referred to, all names should be given in the first citation, with an ampersand linking the last two; e.g. (Fraser, Bellugi & Brown 1963); in subsequent citations the first name only should be given, with 'et al.' added.

All works referred to should be listed at the end of the article, double-spaced and in alphabetical order. The titles of articles should as far as possible be abbreviated according to the conventions of the Linguistic Bibliography of the Permanent International Committee of Linguists (CIPL). Examples of references (note the use of punctuation marks) are:

Carroll, J. B. (1961). Language development in children. In S. Saporta (ed.), *Psycholinguistics: a book of readings*. New York: Holt, Rinehart & Winston.

Lenneberg, E. H. (1967). *Biological foundations of language*. New York: Wiley.

Oldfield, R. C. & Marshall, J. C. (eds) (1968). *Language*. Harmondsworth: Penguin.

Velten, H. V. (1943). The growth of phonemic and lexical patterns in infant language. *Lg* 19. 281-92.

Drawings, graphs, tables and figures should be done to professional standards in Indian ink on heavy unruled paper, or on graph paper ruled in light blue. Lettering on graphs, etc., is to be indicated in blue pencil or (preferably) on an overlying sheet of tracing paper.

With the exception of the title-page, book reviews should be submitted in the same form as articles. The title-page should be of the following form:

F. Smith & G. A. Miller (eds), *The genesis of language*. Cambridge, Mass.: MIT Press, 1966. Pp. xii + 400.
