# LETTER

## Can anyone help with guidelines/policies?

Dear Editor,

I work in a 16 bay recovery room dealing with a lot of elderly clients undergoing major orthopaedic procedures. We are trying to establish guidelines/policies for our unit, including one on ECG monitoring. One of the questions that have come up is whether recovery is a critical care unit. Can any of

your members or contributors provide us with any information about practices or policies in their areas.

I look forward to hearing from you
