

THE JOURNAL
OF
MENTAL SCIENCE

Published by Authority of the
Association of Medical Officers of Asylums and Hospitals
for the Insane.

EDITED BY

C. L. ROBERTSON, M.D. CANTAB.

AND

HENRY MAUDSLEY, M.D. LOND.

"Nos vero intellectum longius à rebus non abstrahimus quam ut rerum imagines et
radii (ut in sensu fit) coire possint."

FRANCIS BACON, *Proleg. Instaurat. Med.*

VOL. X.

LONDON:
JOHN CHURCHILL AND SONS,
NEW BURLINGTON STREET.

MDCCCLXV.

"In adopting our title of the *Journal of Mental Science*, published by authority of the Association of Medical Officers of Asylums and Hospitals for the Insane, we profess that we cultivate in our pages mental science of a particular kind, namely, such mental science as appertains to medical men who are engaged in the treatment of the insane. But it has been objected that the term mental science is inapplicable, and that the terms, mental physiology, or mental pathology, or psychology, or psychiatry (a term much affected by our German brethren), would have been more correct and appropriate; and that, moreover, we do not deal in mental science, which is properly the sphere of the aspiring metaphysical intellect. If mental science is strictly synonymous with metaphysics, these objections are certainly valid, for although we do not eschew metaphysical discussion, the aim of this Journal is certainly bent upon more attainable objects than the pursuit of those recondite inquiries which have occupied the most ambitious intellects from the time of Plato to the present, with so much labour and so little result. But while we admit that metaphysics may be called one department of mental science, we maintain that mental physiology and mental pathology are also mental science under a different aspect. While metaphysics may be called speculative mental science, mental physiology and pathology, with their vast range of inquiry into insanity, education, crime, and all things which tend to preserve mental health, or to produce mental disease, are not less questions of mental science in its practical, that is, in its sociological, point of view. If it were not unjust to high mathematics to compare it in any way with abstruse metaphysics, it would illustrate our meaning to say, that our practical mental science would fairly bear the same relation to the mental science of the metaphysicians as applied mathematics bears to the pure science. In both instances the aim of the pure science is the attainment of abstract truth; its utility, however, frequently going no further than to serve as a gymnasium for the intellect. In both instances the mixed science aims at, and, to a certain extent, attains, immediate practical results of the greatest utility to the welfare of mankind; we therefore maintain that our Journal is not inaptly called the *Journal of Mental Science*, although the science may only attempt to deal with sociological and medical inquiries, relating either to the preservation of the health of the mind or to the amelioration or cure of its diseases; and although not soaring to the height of abstruse metaphysics, we only aim at such metaphysical knowledge as may be available to our purposes, as the mechanician uses the formularies of mathematics. This is our view of the kind of mental science which physicians engaged in the grave responsibility of caring for the mental health of their fellow-men may, in all modesty, pretend to cultivate; and while we cannot doubt that all additions to our certain knowledge in the speculative department of the science will be great gain, the necessities of duty and of danger must ever compel us to pursue that knowledge which is to be obtained in the practical departments of science, with the earnestness of real workmen. The captain of a ship would be none the worse for being well acquainted with the higher branches of astronomical science, but it is the practical part of that science as it is applicable to navigation which he is compelled to study."

J. C. BUCKNILL.

| VI. Geography. | |

REVIEWS :

Entozoa; The Laws of Health; Human Physiology; Man and Nature; The New Zealand Flora; The Flora of the British West Indian Islands; The Australian Flora; British and Garden Botany; South African Butterflies; Chemical Analysis; The Astronomical Observer; Sericulture in Oudh.

NOTES AND CORRESPONDENCE.

- On the Probable Existence of the Repetition of Octaves in the Solar Spectrum.
C. HILTON FAGGE, M.D.
On the Vast Antiquity of the Lunar Surface. **JAS. NASMYTH.**

JOHN CHURCHILL & SONS, New Burlington Street.

In One Volume, 8vo, cloth, £2 10s.,

LIBRARY
AN EXPOSITORY LEXICON

OF

50,000 TERMS, ANCIENT AND MODERN, IN MEDICAL
AND GENERAL SCIENCE,

INCLUDING

A COMPLETE MEDICAL AND MEDICO-LEGAL VOCABULARY;

And presenting the correct Pronunciation, Derivation, Definition, and
Explanation of the Names, Analogues, Synonymes, and Phrases
(in English, Latin, Greek, French, and German), employed
in Science, and connected with Medicine.

By R. G. MAYNE, M.D.

"A work to which there is no equal in the English language."—*Edinburgh Medical Journal*.

"The Dictionary contains a large amount of information, well arranged, and very accessible; and we have little doubt that it will soon come to be regarded as a necessary appendage to the library table of every man of science and scientific dilettante."—*Medico-Chirurgical Review*.

"We are able to bestow upon Dr. Mayne's labours the most unqualified approbation. So needful is the work here undertaken, and so admirably executed the task, that we doubt not its publication will eventually be as satisfactory in a commercial point of view as it now is in respect to the author's scholarship and professional reputation. This is expressing much in its favour, but not more than is just. So good is the book, that in spite of what many will deem its 'dry subject,' of the limited sale existing among the profession for works of high literary reputation, and the little attraction such an expenditure of talent, time, and money, ordinarily presents to the book-buying public, we believe this 'Expository Lexicon' will gradually force itself into a very wide circulation, and be eventually regarded as the 'Liddell and Scott' of the writers in the Medical Sciences."—*The Lancet*.

"This very remarkable production has occupied the *hora subseciva* of the author during twenty-eight years. . . . We may half guess at the labour, when we reflect that 50,000 distinct terms, not similarly treated in any other work, have been illustrated in this volume. . . . This is just one of those works which are deserving of public acknowledgment. Its objects are undoubtedly of public utility; little is the service which it can ever prove to its Author in a remunerative sense; and in this sense it is to be especially distinguished from those productions which bring men renown and practice."—*Medical Times and Gazette*.

"This Lexicon is suited to the requirements of every educated gentleman. It embraces 'the correct pronunciation, derivation, definition, and application, of the names, analogues, synonymes, and phrases (in English, Latin, Greek, French, and German), connected with Medicine, and employed in Anatomy, Animal Pathology, Astronomy, Botany, Chemistry, Comparative Anatomy, Conchology, Crystallography, Entomology, Geography, Geology, Geometry, Ichthyology, Materia Medica, Medical Jurisprudence or Forensic Medicine, Microscopy, Mineralogy, Natural History, Natural Philosophy, Nosology, Obstetrics, Ornithology, Pathological Anatomy, Pathology, Pharmacy, Phrenology, Physiology, Surgery, Trigonometry, and Zoology.' We hope that the extraordinary industry and erudition displayed in this work may be rewarded by an extensive sale. While it is peculiarly adapted to the Medical profession, it must prove equally useful to all scientific men."—*British Medical Journal*.

JOHN CHURCHILL AND SONS, NEW BURLINGTON STREET.
