PUBLISHED BY

CAMBRIDGE UNIVERSITY PRESS

Bentley House, 200 Euston Road, London, N.W. 1

American Branch: 32 East 57th Street, New York, N.Y. 10022

SUBSCRIPTION £5 net (U.S.A. \$18.50) per volume

SINGLE PARTS 45s. net (U.S.A. \$7.50)

GENETICAL RESEARCH

GENETICAL RESEARCH publishes original work on all aspects of genetics, or in any field of research which has an important bearing on genetics. Papers will be submitted to referees before acceptance. They will generally be printed in order of acceptance. In addition, Short Papers (see below) may be included if received 3 months before publication date.

GENETICAL RESEARCH is published bi-monthly.

Single parts 45s. net (\$7.50 in U.S.A.), plus postage.

Three parts form a volume. The subscription price of a volume (which includes postage) is £5 net (\$18.50 in U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y.

Orders should be sent to a bookseller or to the publishers, Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1 and 32 East 57th Street, New York, N.Y. 10022.

NOTES FOR CONTRIBUTORS

CONTRIBUTIONS will be welcomed from scientists of all nationalities, but must be written in English, with an English summary. An additional summary in French, German, Russian or Italian will be accepted. Papers should be sent to the Executive Editor, Dr E. C. R. Reeve, Institute of Animal Genetics, West Mains Road, Edinburgh 9.

GENERAL. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers published in *Genetical Research* may not be reprinted or published in translation without permission from the Editorial Board. Papers should be as concise as clarity permits, and illustrations kept as few as possible.

SHORT PAPERS. This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 6 pages of print in length.

TYPESCRIPTS. A top copy and one carbon copy should be submitted. They should be typed with double-spacing, on one side of the paper, leaving margins of about 1½ inches at the left-hand side and head of each sheet. Quarto is preferred to foolscap paper. Heavily corrected typescripts may have to be returned to the author for retyping. Papers should state the name and address of the author (or his proxy) to whom proofs are to be sent. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address and sources of financial support may be added in footnotes.

A short title should be supplied for running headlines; this must not exceed 50 characters, counting each letter and space as one character.

Editor in chief
E.S. Krudy DSc. MRCVS. DiplBact. FIL. AllInfSc

A monthly abstracting journal providing 7000-8000 abstracts per annum drawn from 1050 primary journals within 8 to 10 weeks of publication of the original paper.

Papers relating to all aspects of genetics are abstracted as broadly defined by the chapter headings below.

Each monthly issue contains a full author index. A full subject index, in which each abstract is indexed four ways, is published quarterly.

Order now or apply for specimen issue by returning attached card

The subjects embodied in the monthly chapter headings are:

Molecular genetics
Chromosomes : structure and function
Mapping
Genes : structure and action
Complex loci
Mutagenesis
Radiation genetics
Recombinations
Taxonomy
Immunogenetics
Genetic resistance
Behavioural genetics

Statistical genetics
Evolution
Ecological genetics
Human genetics
Medical genetics
Animal genetics and breeding
Plant genetics and breeding
Algal genetics
Fungal genetics
Bacterial genetics
Viral genetics

POPULATION BIOLOGY AND EVOLUTION

EDITED BY RICHARD C. LEWONTIN

A proper understanding of evolutionary changes in populations and composition of living communities requires an integration of knowledge from genetics, development, and ecology. There has been little contact among these fields in the past, and little correlation of theories or experimental results for exploration of the problems of population biology.

An international symposium held last year at Syracuse University brought together leading geneticists, ecologists, and developmental biologists for a consideration of their special fields from the perspective of population biology and its particular problems. The thirteen papers in this book represent, in effect, an effort to create a science of population biology from the diverse elements of genetics, development, and ecology.

The articles and their authors are:

- 1 **The Spectrum of Genetic Variation**, by A. Robertson
- 2 **Integration of Development and Evolutionary Progress**,
by G. L. Stebbins
- 3 **The Paradigm for the Evolutionary Process**, by C. H.
Waddington
- 4 **Genetic Control of a Developmental Process**, by
J. M. Rendel
- 5 **Evolutionary Consequences of Flexibility**, by R. Levins
- 6 **Some Analysis of Hidden Variability in *Drosophila*
Populations**, by J. F. Crow
- 7 **Polymorphism, Population Size, and Genetic Load**, by
B. Wallace
- 8 **Adaptness and Fitness**, by Th. Dobzhansky
- 9 **The Population Flush and Its Genetic Consequences**, by
H. L. Carson
- 10 **The Regulation of Numbers and Mass in Plant Popula-
tions**, by J. L. Harper
- 11 **The Theory of the Niche**, by R. MacArthur
- 12 **When Are Species Necessary?** by G. E. Hutchinson
- 13 **Toward a Predictive Theory of Evolution**, by L. B.
Slobodkin

Drawings, photographs, tables. \$8.00
