

Essays in Time Series and Allied Processes

Papers in honour of

E. J. HANNAN

Edited by

J. GANI AND M. B. PRIESTLEY

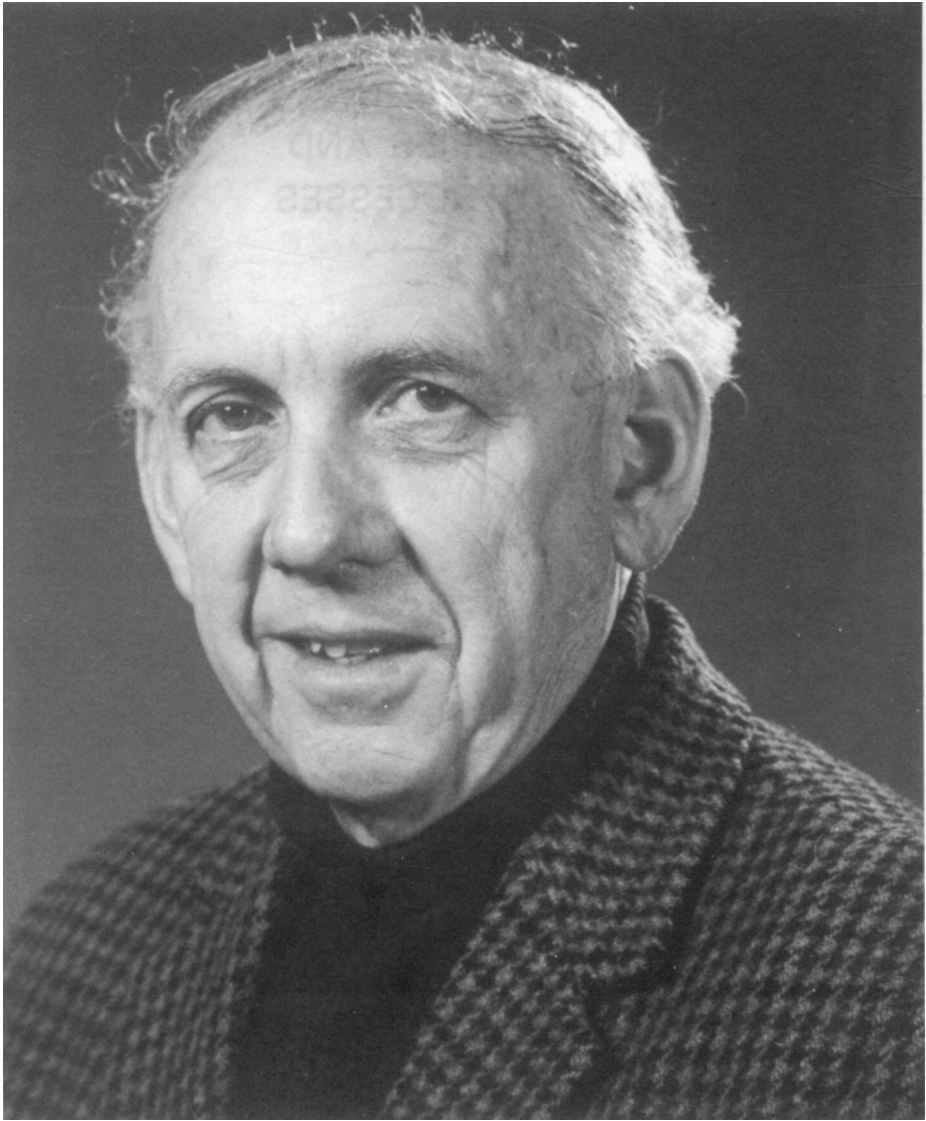

**JOURNAL OF APPLIED PROBABILITY
SPECIAL VOLUME 23A (1986)**

The development of time series analysis in the past three decades owes much to the work of Professor E. J. Hannan. In this book, 40 colleagues and former students in Australia, Austria, Britain, Burma, China, Japan, New Zealand and the U.S.A. pay tribute to his contributions not only in time series but also in other areas of statistical analysis.

Ted Hannan's work over the past 30 years has displayed a breadth of interests ranging from economics to statistics and probability theory as well as an increasing mathematical depth. The authors of *Essays in Time Series and Allied Processes* have acknowledged these qualities in their contributions, and have indicated their personal debt to Ted Hannan as a research worker, teacher, and collaborator.

Contents

Publications of E. J. Hannan	1
---	----------

Part 1 — Structure and General Methods for Time Series

PETER BLOOMFIELD. Non-singularity and asymptotic independence	9
M. DEISTLER. Linear dynamic errors-in-variables models.....	23
EMANUEL PARZEN. Quantile spectral analysis and long-memory time series	41
JORMA RISSANEN. Order estimation by accumulated prediction errors	55
VICTOR SOLO. Identifiability of time series models with errors in variables	63

Part 2 — Estimation for Time Series

AN HONG-ZHI AND CHEN ZHAO-GUO. The identification of ARMA processes	75
RICHARD J. JONES. Time series regression with unequally spaced data.....	89
J. W. PENM AND R. D. TERRELL. The 'derived' moving-average model and its role in causality	99
P. M. ROBINSON. On a model for a time series of cross-sections	113
RITEI SHIBATA. Consistency of model selection and parameter estimation....	127
P. J. THOMSON. Band-limited spectral estimation of autoregressive–moving-average processes	143

Part 3 — Hypothesis Testing and Distribution Theory for Time Series

MURRAY A. CAMERON. The comparison of transient responses to stimuli....	159
J. DURBIN. Approximate distributions of Student's <i>t</i> -statistics for autoregressive coefficients calculated from regression residuals	173
YUZO HOSOYA. A simultaneous test in the presence of nested alternative hypotheses	187
B. G. QUINN. Testing for the presence of sinusoidal components.....	201
KATSUTO TANAKA. Asymptotic expansions for time series statistics.....	211

Part 4 — Non-linear and Non-stationary Systems in Time Series

D. F. NICHOLLS. The Box–Jenkins approach to random coefficient autoregressive modelling.....	231
TOHRU OZAKI. Local Gaussian modelling of stochastic dynamical systems in the analysis of non-linear random vibrations	241
M. B. PRIESTLEY AND S. M. HERAVI. Identification of non-linear systems using general state-dependent models.....	257

Part 5—Random Fields and Point Processes

DAVID R. BRILLINGER. Regression for randomly sampled spatial series: the trigonometric case	275
---	-----

YOSHIKO OGATA AND KOICHI KATSURA. Point-process models with linearly parametrized intensity for application to earthquake data..... 291

M. ROSENBLATT. Parameter estimation for finite-parameter stationary random fields..... 311

Part 6 — Allied Stochastic Processes

M. S. BARTLETT. Mixed Cox processes, with an application to accident statistics..... 321

J. GANI AND PYKE TIN. A note on the two-sex population process..... 335

C. C. HEYDE. On the use of time series representations of population models 345

T. P. SPEED. ANOVA models with random effects: an approach via symmetry 355

J. G. VEITCH AND G. S. WATSON. Random cyclic transformations of points 369

PETER WHITTLE. The risk-sensitive certainty equivalence principle..... 383

Part 7 — Algorithms and Computations

CRAIG F. ANSLEY AND ROBERT KOHN. On the equivalence of two stochastic approaches to spline smoothing 391

JOHN HENSTRIDGE. Data structures – the problem of time series computing..... 407

P. A. P. MORAN. Orthant probabilities and Gaussian Markov processes..... 413

M. R. OSBORNE AND G. K. SMYTH. An algorithm for exponential fitting revisited 419

List of contributors 431
