A businessman looks at ethics and social philosophy

In Quest of a New Ethics

By CHARLES MAYER

BUILDING on a naturalistic basis, this eminent French biochemist, humanist, and man of letters presents his own solidly realistic view of the ethical problems of today's world. He believes in progress, in enlightened self interest, in free competition; and it is within this framework that he believes altruism and rational ethics have their place. He rejects the idea that all men are equal and is strongly opposed to the "coddling of the weak and inefficient," economic planning, the Welfare State. But he insists that *opportunity* must be equal, that progress can be made only by free individuals, not by regimented societies.

This is a stimulating, sometimes provoking book from which philosophers and businessmen alike can profit.

You know the uses of the new drugs—

But do you know their dramatic stories?

Medical Milestones

By HENRY J. L. MARRIOTT, M.D., Assistant Professor of Medicine, University of Maryland School of Medicine

You are sure to enjoy Marriott's well-told stories about the major advances in medicine in the last few years. He presents accurate, factual, yet intensely readable accounts of the new drugs and new techniques of modern medicine.

Medical Milestones includes chapters on penicillin, streptomycin, cortisone, dramamine and dicumarol—the "blue baby" operation—the Rh factor—the latest discoveries about leprosy—and many others.

You will particularly appreciate the lucid style of writing that makes medical terms clear. You will refer to this feature often when explaining medical facts to an inquiring patient.
