

Far from the fold

New SURGIPEEL® SELF-SEAL Packaging System

Seals flat to reduce contamination potential

Unique system seals flat—no folding—to eliminate “tunnel” contamination, a potential hazard that could be created by folds in conventional sterilization packaging.

- Surgipeel® Self-Seal pouches seal quickly and easily. Just remove protective backing and press closure strip for flat, secure seal.
- No layers, no folding, no perforations.
- No heat sealing equipment required.
- Each department can now complete sterilization packaging simply, conveniently and independently.
- Superior bacterial barrier.*
- For samples of Surgipeel® Self-Seal Packaging Systems call 800-832-1175 in NY; call 800-645-5003 outside NY.

Destined to be No. 1—Compare with any conventional pouch.

For two decades we've been conducting germ warfare.

There's no room in today's hospitals for cost overruns due to germ infection. That's why CIDEX* Solutions are tackling some major problems facing infection control. From staph to TB. From herpes to influenza.

CIDEX Solutions are the proven leader in asepsis. And your SURGIKOS representative can show you how CIDEX Solutions can help control costs as well as infections. We can help you with in-service training and information about infection control problems.

All you have to do is call 1-800-433-5009. In Texas, call collect 817/467-3555. Remember, with CIDEX Solutions on your side, you can win the battle against infections.
