

Journal of Time Series Analysis

A journal sponsored by the Bernoulli Society for Mathematical Statistics and Probability

Edited by M. B. Priestley

During the last 25 years *Journal of Time Series Analysis* has become one of the most important and widely used branches of Mathematical Statistics. Its fields of application range from neurophysiology to astrophysics and it covers such well-known areas as economic forecasting, study of biological data, control systems, signal processing and communications and vibrations engineering.

The *Journal of Time Series Analysis* was started in 1980 and has since become the leading journal in its field, publishing papers on both fundamental theory and applications.

For Subscription
Information**

Mathematics of Operations Research, published quarterly by INFORMS, is a top research journal for mathematicians, engineers, computer scientists, and economists. The journal publishes significant research and review papers with substantial mathematical interest and relevance to operations research and management science.

Distinguished Editorial Leadership:

Editor

Jan Karel Lenstra, Eindhoven University of Technology

Continuous Optimization

Aharon Ben-Tal, Technion-Israel Institute of Technology

Discrete Optimization

Gerard Cornuejols, Carnegie Mellon University

Stochastic Models

Martin I. Reiman, Lucent Technologies

Game Theory

Sylvain Sorin, École Normale Supérieure

SUBSCRIPTION RATES

Subscription rates (post free) for volume 35 (1998) of the *Journal of Applied Probability* are as follows:

US\$216.00; \$A279.00; £133.50 for libraries and institutions;

US\$72.00; \$A93.00; £44.50 for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

Please send all enquiries to: Applied Probability, School of Mathematics and Statistics, The University, Sheffield S3 7RH, UK.

We can provide back issue prices on application. Cheques, money orders, etc. should be made out to APPLIED PROBABILITY. Payment is accepted in US, UK or Australian currency or by VISA or Mastercard (phone: +44 114 222 3922; fax: +44 114 272 9782).

NOTES FOR CONTRIBUTORS

Papers published in the *Journal* are of two kinds:

- (1) *research papers* not exceeding 20 printed pages;
- (2) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress.

Review papers, longer research papers and letters to the editor are published in *Advances in Applied Probability*, a companion journal. (Note: Letters relating specifically to papers which have appeared in the *Journal of Applied Probability* will continue to appear in the *Journal*.)

The editors may publish accepted papers in either journal, according to the space available, in order to meet the 15-month deadline in publication referred to below.

Submission of papers

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Papers will not be reprinted without the written permission of the Trust. It is the policy not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Fifty reprints of each paper will be provided free; additional reprints are available at cost.

Papers should be written in English or French; papers in other languages may be accepted by the editors, but will appear (subject to the author's agreement) in English or French translation. Please supply *three* double-spaced hard copies, at least one of which should be printed on one side of the paper only. The paper should include: (1) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results; (2) list of keywords detailing the contents for the purpose of computerised information retrieval; (3) primary and secondary classifications according to the 1991 Mathematics Subject Classification, to be found in the 1990 Annual Index of *Mathematical Reviews*.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained free of charge from the Applied Probability Office. An updated version of the guide, with LATEX style files, can be obtained in electronic form on <http://www.shef.ac.uk/~apt> or on PC-compatible disk from the Applied Probability Office.

For efficiency in processing, authors are requested to send all submissions to the Applied Probability Office in Sheffield, rather than to individual editors. The address for all submissions is:

**Executive Editor, Applied Probability, School of Mathematics and Statistics,
The University, Sheffield S3 7RH, UK.**

COPYRIGHT

The copyright of all published papers shall be vested in the Trust. When a paper is accepted for publication, the Trust requests the author(s) to sign a form assigning copyright to the Trust. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$00.70 per copy, plus .20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/98 \$00.70 + .20.

Research Papers

- 517 R. L. TWEEDIE. Truncation approximations of invariant measures for Markov chains
- 537 PETER OLOFSSON. The $x \log x$ condition for general branching processes
- 545 MASAAKI KIJIMA. Hazard rate and reversed hazard rate monotonicities in continuous-time Markov chains
- 557 ALEXIS BIENVENÜE. Un principe d'invariance pour une classe de marches p -corrélées sur \mathbb{Z}^d
- 566 CHENG DER FUH AND TZE LEUNG LAI. Wald's equations, first passage times and moments of ladder variables in Markov random walks
- 581 LAURENCE A. BAXTER. Dynamical systems defined on point processes
- 589 WILLIAM L. COOPER. Negative binomial sums of random variables and discounted reward processes
- 600 ULRICH A. W. TETZLAFF. On normalization constants for closed queueing networks with finite local buffers
- 608 FRANCIS COMETS AND MARTIN JANŽURA. A central limit theorem for conditionally centred random fields with an application to Markov fields
- 622 PAUL JOYCE. Partition structures and sufficient statistics
- 633 YOSHIAKI ITOH, COLIN MALLOWS AND LARRY SHEPP. Explicit sufficient invariants for an interacting particle system
- 642 ALEXANDER V. GNEDIN. On convergence and extensions of size-biased permutations
- 651 HÅKAN ANDERSSON AND TOM BRITTON. Heterogeneity in epidemic models and its effect on the spread of infection
- 662 HÅKAN ANDERSSON AND BOUALEM DJEHICHE. A threshold limit theorem for the stochastic logistic epidemic
- 671 ANDERS MARTIN-LÖF. The final size of a nearly critical epidemic, and the first passage time of a Wiener process to a parabolic barrier
- 683 OLLE HÄGGSTRÖM AND ROBIN PEMANTLE. First passage percolation and a model for competing spatial growth
- 693 DAVID ASSAF AND ESTER SAMUEL-CAHN. Optimal multivariate stopping rules
- 707 SERGEI GRISHECHKIN. Inequalities for multinomial allocations with application to DNA fingerprinting
- 718 PIERRE BERNARD AND LIMING WU. Stochastic linearization: the theory
- 731 PHILIP J. BOLAND AND EMAD EL-NEWEIHI. Statistical and information based (physical) minimal repair for k out of n systems
- 741 NICOLE BÄUERLE AND TOMASZ ROLSKI. A monotonicity result for the workload in Markov-modulated queues
- 748 JOSÉ M. GOUWELÉEUW. A minimax optimal stop rule in reliability checking
- 762 K. S. CHONG AND K. LAM. Applying POS(i) rules to communication problems

Short Communications

- 770 DANIEL RICHARDSON AND WAYNE BURTON. A relatively quick way to simulate local random processes on a lattice
- 776 O. ZEITOUNI. Superexponential decay for the GEM process
