FLORENCE NIGHTINGALE

Superbugs require super-vigilance.

Test for cleanliness. Sterilize for safety.

Superbugs are super-tough. But that doesn't mean they can't be beaten. You can reduce the risk that dangerous, disease-causing organisms remain on your endoscopes, including superbugs like CRE. 3M's solution makes it possible.

New challenges in endoscope reprocessing require new approaches. Protecting patients from potentially fatal infections requires a higher standard of care.

**It's time to make every endoscope safe for every patient.
Find out how at go.3m.com/endoscope.**

CONTENTS

SHEA White Papers

- 1135** Research Methods in Healthcare Epidemiology and Antimicrobial Stewardship—Quasi-Experimental Designs
Marin L. Schweizer, Barbara I. Braun and Aaron M. Milstone
- 1141** Research Methods in Healthcare Epidemiology and Antimicrobial Stewardship—Observational Studies
Graham M. Snyder, Heather Young, Meera Varman, Aaron M. Milstone, Anthony D. Harris and Silvia Munoz-Price

Original Articles

- 1147** Description of a Hospital Outbreak of Middle East Respiratory Syndrome in a Large Tertiary Care Hospital in Saudi Arabia
Hanan H. Balkhy, Thamer H. Alenazi, Majid M. Alshamrani, Henry Baffoe-Bonnie, Yaseen Arabi, Raed Hijazi, Hail M. Al-Abdely, Aiman El-Saed, Sameera Al Johani, Abdullah M. Assiri and Abdulaziz bin Saeed
- 1156** Assessment of Self-Contamination During Removal of Personal Protective Equipment for Ebola Patient Care
Lisa M. Casanova, Lisa J. Teal, Emily E. Sickbert-Bennett, Deverick J. Anderson, Daniel J. Sexton, William A. Rutala, David J. Weber and the CDC Prevention Epicenters Program
- 1162** Evaluation of the New Centers for Disease Control and Prevention Ventilator-Associated Event Module and Criteria in Critically Ill Children in Greece
Elias Iosifidis, Elpis Chochliourou, Asimena Violaki, Elisavet Chorafa, Stavroula Psachna, Afroditi Roumpou, Maria Sdougka and Emmanuel Roilides
- 1167** Factors Associated With Surgical Site Infection Following Gastric Surgery in Japan
Keita Morikane, Hitoshi Honda and Satowa Suzuki
- 1173** Improving Risk Adjustment Above Current Centers for Disease Control and Prevention Methodology Using Electronically Available Comorbid Conditions
Sarah S. Jackson, Surbhi Leekha, Lisa Pineles, Laurence S. Magder, Kerri A. Thom, Yuan Wang and Anthony D. Harris
- 1179** Is There Room for Prevention? Examining the Effect of Outpatient Facility Type on the Risk of Surgical Site Infection
Rishi Parikh, Daniel Pollock, Jyotirmay Sharma and Jonathan Edwards
- 1186** Central-Line-Associated Bloodstream Infections in Québec Intensive Care Units: Results from the Provincial Healthcare-Associated Infections Surveillance Program (SPIN)
Lynne Li, Elise Fortin, Claude Tremblay, Muleka Ngenda-Muadi and Caroline Quach for SPIN-BACC
- 1195** Current State of Antimicrobial Stewardship at Solid Organ and Hematopoietic Cell Transplant Centers in the United States
Susan K. Seo, Kaming Lo and Lilian M. Abbo
- 1201** A Concise Set of Structure and Process Indicators to Assess and Compare Antimicrobial Stewardship Programs Among EU and US Hospitals: Results From a Multinational Expert Panel
Lori A. Pollack, Diamantis Plachouras, Ronda Sinkowitz-Cochran, Heidi Gruhler, Dominique L. Monnet, J. Todd Weber and Transatlantic Taskforce on Antimicrobial Resistance (TATFAR) Expert Panel on Stewardship Structure and Process Indicators
- 1212** Costs and Mortality Associated With Multidrug-Resistant Healthcare-Associated *Acinetobacter* Infections
Richard E. Nelson, Marin L. Schweizer, Eli N. Perencevich, Scott D. Nelson, Karim Khader, Hsiu-Yin Chiang, Margaret L. Chorazy, Amy Blevins, Melissa A. Ward and Matthew H. Samore

1219 Risk Factors for Carbapenemase-Producing Carbapenem-Resistant Enterobacteriaceae (CP-CRE) Acquisition Among Contacts of Newly Diagnosed CP-CRE Patients
Anat Schwartz-Neiderman, Tali Braun, Noga Fallach, David Schwartz, Yehuda Carmeli and Vered Schechner

1226 The Effect of Total Household Decolonization on Clearance of Colonization With Methicillin-Resistant *Staphylococcus aureus*
Valerie C. Cluzet, Jeffrey S. Gerber, Joshua P. Metlay, Irving Nachamkin, Theoklis E. Zaoutis, Meghan F. Davis, Kathleen G. Julian, Darren R. Linkin, Susan E. Coffin, David J. Margolis, Judd E. Hollander, Warren B. Bilker, Xiaoyan Han, Rakesh D. Mistry, Laurence J. Gavin, Pam Tolomeo, Jacqueline A. Wise, Mary K. Wheeler, Baofeng Hu, Neil O. Fishman, David Royer and Ebbing Lautenbach for the CDC Prevention Epicenters Program

Review Article

1234 The Relationship Between Sedatives, Sedative Strategy, and Healthcare-Associated Infection: A Systematic Review
Daniel A. Caroff, Paul M. Szumita and Michael Klompas

Concise Communications

1243 Sustained Impact of an Antibiotic Stewardship Intervention for Community-Acquired Pneumonia
David X. Li, Marcela A. Ferrada, Edina Avdic, Pranita D. Tamma and Sara E. Cosgrove

1247 Surveillance for Healthcare-Associated Influenza-Like Illness in Pediatric Clinics: Validity of Diagnosis Codes for Case Identification
Kristen A. Feemster, Folasade M. Odeniyi, Russell Localio, Robert W. Grundmeier, Susan E. Coffin and Joshua P. Metlay

Research Brief

1251 Invasive Cutaneous *Rhizopus* Infections in an Immunocompromised Patient Population Associated with Hospital Laundry Carts
Lisa J. Teal, Katherine M. Schultz, David J. Weber, Maria F. Gergen, Melissa B. Miller, Lauren M. DiBiase, Emily E. Sickbert-Bennett and William A. Rutala

Letters to the Editor

1254 Methods for Outbreak Detection in Hospitals—Does One Size Fit All?
Mairéad Skally, Sheila Donlon, Caoimhe Finn, Denise McGowan, Karen Burns, Fidelma Fitzpatrick, Edmond Smyth and Hilary Humphreys

1255 Necessity of a Competing Risk Approach in Risk Factor Analysis of Central Line-Associated Bloodstream Infection
Susanne Weber, Maja von Cube, Harriet Sommer and Martin Wolkewitz

1257 The Impact of Carbapenem-Resistant Enterobacteriaceae Type on Clinical Outcomes After the Recovery of This Organism From Urine of Critically Ill Patients
Leandro Reus Rodrigues Perez

1258 The Chicken-Egg Dilemma: Legionnaires' Disease and Retrograde Contamination of Dental Unit Waterlines
Stefano Petti

1260 Antimicrobial Curtains: Are They as Clean as You Think?
Shela A. Sridhar, Nathan A. Ledebor, Rahul S. Nanchal, Tami Mackey, Mary Beth Graham, April VanDerSlik and L. Silvia Munoz-Price

1262 Tourniquet Contamination in Helicopter Emergency Medicine Services in Germany
Sebastian Schulz-Stübner and Jürgen Henker

MICROBIAL SURVEILLANCE TESTING MADE EASY

Healthmark offers the One-Two Punch to Identify and Document the Efficacy of Your Endoscope Reprocessing

SCREEN WITH THE NOW! TEST

*Rapid Indicator of
Gram-Negative bacteria*

Immediate, practical screening test. Simply flush the lumen of a flexible endoscope, such as a duodenoscope, and follow the procedure for gram-negative bacteria detection in less than 12 hours.

< 10 CFU

 **healthmark**

AUDIT WITH THE FLEXIBLE ENDOSCOPE SAMPLING KIT

Surveillance tool for the random testing of duodenoscopes in compliance with CDC guidelines - In association with Nelson Laboratories

A simple and complete kit. After flushing and brushing the lumen and elevator mechanism of a duodenoscope, simply follow the procedure to have the sample solution & brush heads quickly sent to Nelson Laboratories - the leader in independent testing of flexible endoscopes. All tools are included for testing and shipment.

Subscriptions

The individual subscription rate for 2016 is \$235. Individuals have the option to order directly from Cambridge University Press. Institutional print + electronic and e-only subscriptions are available from Cambridge University Press and include unlimited online access; rates are tiered according to an institution's type and research output and may be reviewed at the journal's CJO homepage: <http://journals.cambridge.org/ICE>.

Please direct subscription inquiries and requests for back issues to Customer Services at Cambridge University Press, e-mail: subscriptions_newyork@cambridge.org (USA, Canada, and Mexico) or journals@cambridge.org (outside of USA, Canada, and Mexico).

Postmaster: Send address changes to *Infection Control & Hospital Epidemiology*, Cambridge University Press, One Liberty Plaza, New York, NY 10006 USA.

About the cover:

The cover format of each volume of *Infection Control & Hospital Epidemiology* honors one of the many professionals throughout history who recognized not only how disease might be spread but also how the principles of epidemiology could be applied to reduce healthcare-associated infections.

Florence Nightingale (1820–1910) was named after the Italian city where she was born to affluent and well-educated English landowners. As a middle-class woman in Victorian England, Florence recognized that she was destined for a life of domesticity and “trivial occupations.” Her choice of nursing, given its reputation at the time as a vocation for poor elderly spinsters, was met with significant familial opposition. During her European travels, Ms. Nightingale visited the Deaconess Mutterhaus in Kaiserswerth, Düsseldorf, one of the most forward thinking nursing training schools of the day. She returned to Düsseldorf to complete her training and then studied with the Sisters of Charity in Paris. She later assumed the role of superintendent at a hospital for invalid gentlewomen in London.

In 1854, the Minister of War invited Ms. Nightingale to oversee the introduction of nurses at British Army hospitals in Scutari, Turkey. Up to that point, 20% of men who fought in the Crimean War died, and approximately 70% of those deaths were due to infections such as typhus, cholera, typhoid, and dysentery. The germ theory of disease had not yet been formulated, but Florence Nightingale recognized that most problems were caused by “inadequate diet, dirt, and drains.” She adopted the concept of “sanitary nursing” ensuring that patient care focused on prevention of infection through adequate diet, fresh air, light, warmth, and cleanliness. She was an early advocate for hand hygiene and the need for clean water, adequate ventilation, and appropriate sewage disposal. Each night, she traveled through more than 6 km of hospital wards carrying a Turkish lamp; thus the media referred to her as “The Lady with the Lamp.” With her interventions, mortality rates declined to 2%–6%.

In response, a grateful nation raised £50,000 for the Nightingale Fund, and the first professional training school for nurses at St. Thomas’ Hospital, London, was established under her direction. Florence Nightingale was one of the first to apply statistical analysis to her observations. She made important recommendations regarding the optimal design of hospitals and patient wards, saying, “The very first requirement in a hospital is that it should do the sick no harm.” Training schools have been established worldwide based on her ideas. Florence Nightingale was the first woman to receive Britain’s highest civilian decoration, the Order of Merit. She died at the age of 90 after many years of being bed-ridden due to chronic illness, possibly brucellosis.

Zero to One then there is none!
Zero to One then you're done!

You can't see them or hear them! (GERMS)
You are mortified they exist! (GERMS)
You can't see it or hear it disinfecting!
(DisCide Ultra)

But you will be glad it's there!
DisCide Ultra protects YOU!
Protection YOU can count on!
Kills over 21 deadly pathogens!
Kills in 1 minute or less
without you even seeing it!

XENEX
GERM-ZAPPING ROBOTS™

HOW CAN YOU MEASURE THE IMPACT OF LIGHT?

We measure it in successful surgeries without infection.

The Xenex LightStrike™ Full Spectrum room disinfection system is helping Operating Rooms improve quality and cut the cost of care by significantly reducing Surgical Site Infection (SSI) rates.

CLINICAL OUTCOMES USING LIGHTSTRIKE ROBOTS:

1. 100%

reduction in total joint SSI rates.¹

\$300,000 saved.

2. 46%

reduction in Class I SSIs.²

\$478,000 saved.
