

ON THE ORIGIN OF PHYLA

JAMES W. VALENTINE

“The Cambrian Radiation and the origins of phyla has been the mystery of mysteries since Darwin first worried over its implications for his view of life. Integrating detailed discussions of each of the metazoan clades with evidence from paleontology, molecular phylogenetics, and comparative developmental biology, Jim Valentine delivers a thought-provoking and innovative examination of one of the pivotal episodes in earth history. Beyond serving as the definitive history for our generation, this volume will also be the foundation for much future research.”

—Douglas H. Erwin, Curator,
Department of Paleobiology,
National Museum of Natural History

“James Valentine, one of the world’s foremost paleobiologists, has combined the most modern knowledge on metazoan anatomy, paleontology, evolutionary developmental biology, molecular systematics and evolutionary theory in his magnificent *On the Origin of Phyla*. No other text has attempted such an integrative approach to animal evolution. Its highly interesting scientific content is delivered by the fluid prose that characterizes Valentine’s writings. Truly an indispensable book for those interested in the origins and evolution of higher animal diversity.”

—Gonzalo Giribet, Harvard University

PERMANENT SPECIMEN PRESERVATION

The Science of Protection

For over forty years, Lane Science Equipment has been the name museums, universities and individual collectors trust most to protect their valuable specimens.

To learn more about our specimen storage and dryer cabinets, visit our website at www.lanescience.com or contact us at the listing below.

- * All steel construction
- * Powder paint finish
- * Durable neoprene door seal
- * No adhesives
- * Fumigant compartment
- * Lane double panel lift-off door
- * Three-point locking mechanism

JOURNAL POLICY

PALEOBIOLOGY publishes original contributions of any length (but normally 10–50 manuscript pages) dealing with any aspect of biological paleontology. The emphasis should be upon biological or paleobiological processes and patterns. These include speciation, extinction, development of individuals and of colonies, natural selection, evolution, and patterns of variation, abundance, and distribution in space and time. Papers concerning research on recent organisms and systems are appropriate if they are of particular interest to paleontologists. Taxonomic papers are welcome if they have significant and broad applications. All manuscripts are to be in English. A guide to manuscript preparation is published in the first issue of each volume. Submission of a manuscript to PALEOBIOLOGY implies that it is not simultaneously being considered for publication by another journal.

PALEOBIOLOGY also welcomes submissions for *Matters of the Record*, which features up-to-date discussions of new discoveries, reviews of recent conceptual advances, and brief syntheses of important topics. In most cases, submissions will be limited to 4–6 manuscript pages with sufficient references. All submissions will be vetted for appropriateness and peer-reviewed prior to acceptance. Inquiries, proposals, and submissions should be directed to the editors.

MANUSCRIPT ACCEPTANCE POLICY

It is understood that, in return for publication, the journal has the nonexclusive right to publish the contribution and the continuing right, without limit, to include the contribution as part of any reprinting of the issue and/or volume of the journal in which the contribution first appeared by any means and in any format, including computer-assisted storage and readout, in which the issue and/or volume may be reproduced by the publisher or by its licensed agencies.

The appearance of the code at the bottom of the first page of each contribution in this journal indicates the copyright owner's consent that copies of the article (or of articles in back issues) may be made for personal use. For copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, this consent is given on the condition that the copier pay the stated per-copy fee through the Copyright Clearance Center, Inc. (P.O. Box 765, Schenectady, New York 12301). This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale, and similar.
