

ADVANCES IN APPLIED PROBABILITY
VOLUME 42 (2010): INDEX
Stochastic Geometry and Statistical Applications

	PAGES
ADLER, R. J., SAMORODNITSKY, G. AND TAYLOR, J. E. Excursion sets of three classes of stable random fields	293–318
BALISTER, P., BOLLOBÁS, B., SARKAR, A. AND WALTERS, M. Sentry selection in wireless networks	1–25
BÁRÁNY, I., FODOR, F. AND VÍGH, V. Intrinsic volumes of inscribed random polytopes in smooth convex bodies	605–619
BARDEN, D. <i>see</i> LE, H.	
BOLLOBÁS, B. <i>see</i> BALISTER, P.	
COWAN, R. New classes of random tessellations arising from iterative division of cells	26–47
DAVYDOV, Y., NAGAEV, A. AND PHILIPPE, A. On the peeling procedure applied to a Poisson point process	620–630
FODOR, F. <i>see</i> BÁRÁNY, I.	
GLOAGUEN, C. <i>see</i> VOSS, F.	
GUPTA, B. AND IYER, S. K. Criticality of the exponential rate of decay for the largest nearest-neighbor link in random geometric graphs	631–658
IYER, S. K. <i>see</i> GUPTA, B.	
JORDAN, J. Degree sequences of geometric preferential attachment graphs	319–330
LE, H. AND BARDEN, D. On the induced distribution of the shape of the projection of a randomly rotated configuration	331–346
MØLLER, J. AND SCHOENBERG, F. P. Thinning spatial point processes into Poisson processes	347–358
MUCHE, L. Contact and chord length distribution functions of the Poisson–Voronoi tessellation in high dimensions	48–68
NAGAEV, A. <i>see</i> DAVYDOV, Y.	
PENROSE, M. D. AND WADE, A. R. Limit theorems for random spatial drainage networks	659–688
PHILIPPE, A. <i>see</i> DAVYDOV, Y.	
SAMORODNITSKY, G. <i>see</i> ADLER, R.	
SARKAR, A. <i>see</i> BALISTER, P.	
SCHMIDT, V. <i>see</i> VOSS, F.	
SCHOENBERG, F. P. <i>see</i> MØLLER, J.	
SCHREIBER, T. AND THÄLE, C. Second-order properties and central limit theory for the vertex process of iteration infinitely divisible and iteration stable random tessellations in the plane	913–935
SOO, T. Translation-equivariant matchings of coin flips on \mathbb{Z}^d	69–82
TAYLOR, J. <i>see</i> ADLER, R.	
THÄLE, C. <i>see</i> SCHREIBER, T.	
VÍGH, V. <i>see</i> BÁRÁNY, I.	
VOSS, F., GLOAGUEN, C. AND SCHMIDT, V. Scaling limits for shortest path lengths along the edges of stationary tessellations	936–952
WADE, A. R. <i>see</i> PENROSE, M. D.	
WALTERS, M. <i>see</i> BALISTER, P.	
YAO, Y. -C. On variances of partial volumes of the typical cell of a Poisson–Voronoi tessellation and large-dimensional volume degeneracy	359–370
