

## Subscription rates

Subscription rates for volume **54** (2017) of *Journal of Applied Probability* (JAP) are as follows (post free and online access at <http://cambridge.org/jpr>). For libraries and institutions: US\$361.00, £233.00 (online only); US\$397.00, £256.00 (online & print). For individuals, US\$137.00, £88.00 (online & print). The subscription rates for volume **49** (2017) of *Advances in Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/17

*Research Papers*

- 657 MARK BROWN, JOEL E. COHEN AND VICTOR H. DE LA PEÑA. Taylor's law, via ratios, for some distributions with infinite mean
- 670 YINGHUA DONG AND GENNADY SAMORODNITSKY. Contact distribution in a thinned Boolean model with power-law radii
- 685 XIAOQING PAN AND XIAOHU LI. Increasing convex order on generalized aggregation of SAI random variables with applications
- 701 HRISHIKESH BALAJI AND HOSAM MAHMOUD. The Gini index of random trees with an application to caterpillars
- 710 HUY N. CHAU, ANDREA COSSO, CLAUDIO FONTANA AND OLEKSII MOSTOVYI. Optimal investment with intermediate consumption under no unbounded profit with bounded risk
- 720 SERIK SAGITOV AND THIBAUT FRANCE. Limit theorems for pure death processes coming down from infinity
- 732 PÉTER KEVEL. Implicit renewal theory in the arithmetic case
- 750 JØRUND GÅSEMYR AND BENT NATVIG. Improved availability bounds for binary and multistate monotone systems with independent component processes
- 763 CHUNLING LUO, ZHOU HE AND CHIN HON TAN. Almost stochastic dominance under inconsistent utility and loss functions
- 773 ANNE SABOURIN AND JOHAN SEGERS. Marginal standardization of upper semicontinuous processes. With application to max-stable processes
- 797 MICHAEL FALK AND MAXIMILIAN ZOTT. On generalized max-linear models in max-stable random fields
- 811 ZHONGQUAN TAN. Limit laws on extremes of nonhomogeneous Gaussian random fields
- 833 ANDERS RØNN-NIELSEN AND EVA B. VEDEL JENSEN. Excursion sets of infinitely divisible random fields with convolution equivalent Lévy measure
- 852 TONGKEUN CHANG. Absolute continuity of distributions of one-dimensional Lévy processes
- 873 BORIS BUCHMANN, YUGUANG F. IPSEN AND ROSS MALLER. Functional laws for trimmed Lévy processes
- 890 CLAUDE LEFÈVRE AND PHILIPPE PICARD. On the outcome of epidemics with detections
- 905 ETIENNE PARDOUX AND BRICE SAMEGNI-KEPGNOU. Large deviation principle for epidemic models
- 921 GIANMARCO BET, REMCO VAN DER HOFSTAD AND JOHAN S. H. VAN LEEUWAARDEN. Finite-pool queueing with heavy-tailed services
- 943 HARSHA HONNAPPA. Rare events of transitory queues

*Short Communications*

- 963 VADIM ARKIN AND ALEXANDER SLASTNIKOV. On the threshold strategies in optimal stopping problems for diffusion processes
- 970 BIN CHENG AND JIANTIAN WANG. Stochastic comparison of parallel systems with heterogeneous exponential components
