

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editor, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used will be of great help to the editors.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

The Joly topology and the Mosco-Beer topology revisited	
Dominique Azé and Jean-Paul Penot	353
Linear mappings preserving square-zero matrices	
Peter Šemrl	365
A note on Baric algebras	
Raúl Andrade and Alicia Labra	371
Remarks concerning the 2-Hilbert class field of imaginary quadratic number fields	
Elliot Benjamin	379
Equivalents of Ekeland's principle	
W. Oettli and M. Théra	385
Characterisations of quasiconvex functions	
Dinh The Luc	393
On the normal version of the simplicial cohomology of operator algebras	
A.Ya. Helemskii and Z.A. Lykova	407
Local integral metrics and Daniell-Loomis integrals	
M. Diaz Carrillo and H. Günzler	411
A theorem on the spectral radius of the sum of two operators and its application	
M. Zima	427
On a resonance problem with nonlinearities of arbitrary polynomial growth	
Chung-Wei Ha and Wen-Bing Song	435
Multipliers for weighted Hardy spaces on locally compact Vilenkin groups	
Toshiyuki Kitada	441
New generalisations of an H-KKM type theorem and their applications	
Xie Ping Ding	451
The minimal size of a square which includes a digital convex $2k$-gon	
Dragan M. Acketa and Joviša D. Žunić	465
Nonoscillatory solutions of neutral delay differential equations	
Ming-Po Chen, J.S. Yu and Z.C. Wang	475
Landau-Kolmogorov inequality on a finite interval	
W. Chen	485
On the orders of primitive linear p'-groups	
A. Gambini Weigel and T.S. Weigel	495
ABSTRACTS OF AUSTRALASIAN Ph.D. THESES	
Power series expansions of algebraic functions	
Deryn Griffiths	523
On the optimal capacity expansion of electric power systems	
Joseph A. Young	525
Topographical effects in meteorology	
Shaun R. Belward	527
