

Instructions for Contributors

Zygote is an international journal dedicated to the rapid publication of original research in early embryology. It covers interdisciplinary studies on gametogenesis through fertilization to gastrulation in animals and humans. The scope has been expanded to include clinical papers, molecular and developmental genetics. While the editors will favour work describing fundamental processes in the cellular and molecular mechanisms of animal development, and, in particular, the identification of unifying principles in biology, new technologies, review articles, debates and letters will become a prominent feature.

Subjects covered include gametogenesis, sperm–oocyte interaction, gamete and embryo physiology, cell polarity, cell–cell interactions, nuclear transfer, haploidization, molecular and developmental genetics, in-vitro fertilization, stem cell and cryoconservation technologies.

All manuscripts must be submitted online at:
<http://mc.manuscriptcentral.com/zygote>

Submission of a paper will be taken to imply that it is unpublished and it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

There is no formal restriction on length; however, original articles and reviews of less than 15000 words are likely to appear sooner than longer ones. Short communications should not exceed 1500 words and News and Views Commentaries 500 words.

Preparation of manuscripts

Manuscripts should be organised as follows: Title page (with full names and addresses of all authors, a running headline of up to 35 characters, and a contact address with telephone number and email address), an Abstract of not more than 250 words followed by 5 Keywords, Introduction, Materials and Methods, Results, Discussion (combined Results and Discussion may be used for short papers), Acknowledgements, References, Endnotes, Tables and Figure Legends.

Manuscripts should be prepared using SI units

Figures

Figures should be numbered consecutively as they appear in the text. Any indication of features of special interest should also be included. Figures must be supplied electronically. They must be saved at final publication size and ideally supplied in the following file formats: halftone figures (black & white, and colour) as TIF files at 300 dpi; black & white line figures as TIF or EPS files at 1000 – 1200 dpi. PDF format is also accepted. When relevant, photographs should be submitted with proposed reduction or magnification indicated by a scale line on or beside, the illustration.

The places for insertion into the text should be indicated in the text as 'Fig. 1' etc. Legends for all illustrations should be typed together, separately from the main text.

More detailed information is available at:
<http://journals.cambridge.org/artworkguide>

Tables

Tables with concise headings should be placed at the end of the paper. Each table must have a text reference, in the form 'Table 1' etc.

References

References should be cited in the text as Conklin (1905) showed or as shown (Conklin, 1905). For papers with three or more authors use et al. A full list of references in alphabetical order should be given at the end of the text: surname of author and initials; year of publication (in parentheses); title of paper; journal or book name (the former being abbreviated in accordance with the World List of Scientific Periodicals); volume number; first and last page of the reference. For books and conference proceedings, place of publication and publisher (and editor(s) if appropriate) should be included.

Proofs

Proofs will be sent to the author for checking. Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints

A PDF offprint of each article will be supplied free to each first named author.

ZYGOTE

The Biology of Gametes and Early Embryos

CONTENTS

ORIGINAL ARTICLES

Ultrastructure of the oviductal mucosa of *Leptodactylus chaquensis*. Analysis of the preovulatory and postovulatory periods

Medina M. F., Ramos I., Crespo C. A., Cisint S., Villagra L. I. & Fernández S. N. 635

Spermatozoa isolated from cat testes retain their structural integrity as well as a developmental potential after refrigeration for up to 7 days

Buarpong S., Tharasanit T., Thongkittidilok C., Comizzoli P. & Techakumphu M. 644

ERK1/2 mediates sperm acrosome reaction through elevation of intracellular calcium concentration

Jaldety Y. & Breitbart H. 652

The impact of the embryo quality on the risk of multiple pregnancies

de Almeida Ferreira Braga D. P., Setti A. S., Figueira R. de C. S., Iaconelli Jr A. & Borges Jr E. 662

Cytoskeletal proteins associate with components of the ribosomal maturation and translation apparatus in *Xenopus* stage I oocytes

Chierchia L., Tussellino M., Guarino D., Carotenuto R., DeMarco N., Campanella C., Biffo S. & Vaccaro M. C. 669

Characterization of freshly retrieved preantral follicles using a low-invasive, mechanical isolation method extended to different ruminant species

Langbeen A., Jorssen E. P. A., Fransen E., Rodriguez A. P. A., García M. C., Leroy J. L. M. R. & Bols P. E. J. 683

Effect of anti-PMSG on distribution of estrogen receptor alpha and progesterone receptor in mouse ovary, oviduct and uterus

Lin Z. L., Ni H. M., Liu Y. H., Sheng X. H., Cui X. S., Kim N. H. & Guo Y. 695

Oct4 overexpression facilitates proliferation of porcine fibroblasts and development of cloned embryos

Kim S. J., Koo O. J., Park H. J., Moon J. H., da Torre B. R., Javaregowda P. K., Kang J. T., Park S. J., Saadeldin I. M., Choi J. Y., Lee B.-C. & Jang G. 704

Paternal breed effects on expression of *IGF-II*, *BAK1* and *BCL2-L1* in bovine preimplantation embryos

Valleh M. V., Tahmoorespur M., Joupari M. D., Dehghani H., Rasmussen M. A., Hyttel P. & Strobech L. 712

Comparative and phylogenetic perspectives of the cleavage process in tailed amphibians

Desnitskiy A. G. & Litvinchuk S. N. 722

Membrane lipid profile monitored by mass spectrometry detected differences between fresh and vitrified *in vitro*-produced bovine embryos

Leão B. C. S., Rocha-Frigoni N. A. S., Cabral E. C., Franco M. F., Ferreira C. R., Eberlin M. N., Filgueiras P. R. & Mingoti G. Z. 732

Structural analysis of embryogenesis of *Leiarius marmoratus* (Siluriformes: Pimelodidae)

Oliveira-Almeida I. R., Buzollo H., Costa R. da S., Verissimo-Silveira R., Porto-Foresti F. & Ninhaus-Silveira A. 742

Effect of epigenetic modification with trichostatin A and S-adenosylhomocysteine on developmental competence and POU5F1-EGFP expression of interspecies cloned embryos in dog

Mousai M., Hosseini S.M., Hajian M., Jafarpour F., Asgari V., Forouzanfar M. & Nasr-Esfahani M.H. 758

Decrease in fertilization and cleavage rates, but not in clinical outcomes for infertile men with AZF microdeletion of the Y chromosome

Zhu Y.-C., Wu T.-H., Li G.-G., Yin B., Liu H.-J., Song C., Mo M.-L. & Zeng Y. 771

Poor embryo development and preimplantation genetic diagnosis outcomes of translocations involving chromosome 10: Do we blame genetics?

Tulay P., Gultomruk M., Findikli N. & Bahceci M. 778

The cryoprotective effect of Ficoll on the rabbit spermatozoa quality

Kuliková B., Di Iorio M., Kubovicova E., Kuzelova L., Iaffaldano N. & Chrenek P. 785
