# EPIDEMIOLOGIA E PSICHIATRIA SOCIALE

## INSTRUCTIONS FOR AUTHORS

*Epidemiologia e Psichiatria Sociale* (EPS) was established in 1992 by Michele Tansella and is intended to provide updated data and scientific information to epidemiologists, psychiatrists, psychologists, statisticians and other researchers and mental health workers primarily concerned with public health and epidemiological and social psychiatry.

Priority is given to original research and systematic literature reviews in mental health service research, that may improve the quality of everyday practice

EPS is published every three months (in March, June, September and December).

Besides *Original articles* (no more than 4000 words, plus references) and *Short papers* (no more than 2500 words, plus references) which report empirical findings, EPS publishes *Editorials*, both in English and Italian, and *Papers in English, by invitation*. The Editor will also consider *Methodological contributions*, *Literature reviews and Reports about clinical experience* (including the development and organisation of Mental Health Services). Contributions can be in English or Italian.

EPS also publishes *Documents*, to provide information and news related to different aspects of psychiatric care, for example about legal and regulatory issues, etc., that may be of interest not only to professionals in the field, but also to administrators, technicians and officers of Local Health Units (Aziende ULSS, Aziende Ospedaliere) and Regional Health Offices.

Finally the Section *Instruments* (edited by Mirella Ruggeri) focuses upon scales, questionnaires and other assessment measurements, relevant to epidemiological psychiatric research.

Manuscripts for publication with all figures and tables should be sent, with 3 copies, to the Editor at the following address:

Professor Michele Tansella, Dipartimento di Medicina e Sanità Pubblica, Sezione di Psichiatria, Università di Verona,  
Ospedale Policlinico G.B. Rossi, Piazzale L.A. Scuro 10, 37134 Verona, Italia.

The main author must state in their covering letter that the study has not been previously published and that the submitted paper is not under consideration elsewhere. The papers that are published will be protected by copyright.

Submission via e-mail is also accepted: The Editor' e-mail address is the following: michele.tansella@univr.it  
The paper must be written in Word for Windows and should include all figures and tables, possibly in the same file. The covering letter should be on a separate file.

Contributions (excluding invited Editorials and Papers) are accepted for publication after peer review.

### MANUSCRIPTS

Articles should be typed double-spaced throughout, on one side of paper only and with wide margins.

On the first page of all manuscripts (Original papers, Short papers, Editorials, Reviews, Reports) there should be: a full title (in both Italian and English, if possible); a short title; the names and surnames of all the authors; the institute to which each author is affiliated; and at the bottom of the page, the full mailing address of the author to whom correspondence should be sent. Please also supply a phone and fax number, with an international code, as well as your e-mail address. The second and third pages of all manuscripts should contain a Summary of the paper, in English. The Summary should be no longer than 200 words and should be subdivided into the following sections: *Aims* (summarise aims and objectives of the work); *Methods* (data sources, criteria of inclusion/exclusion of reviewed papers, etc.), *Results* (most important findings obtained), *Conclusions* (that is directly supported by data). After the Summary, please provide 4 *Key Words* (in English, selected from those included in the Pubmed MESH Thesaurus) and a *Declaration of Interest*, in which Authors must declare:

- i. any grants and financial support received for the study;
- ii. any forms of financing (included pharmaceutical company support and any honoraria for consultancies or interventions received by each author in the last two years)
- iii. any other involvements that might be considered a conflict of interest in connection with the submitted article.

For Articles in Italian, a Summary ("Riassunto") no longer than 200 words is required before the "Bibliografia". The summary should be subdivided into the following sections: *Scopo* (summarise aims and objectives of the work); *Metodo* (data sources, criteria of inclusion/exclusion of reviewed papers, etc.), *Risultati* (most important findings obtained), *Conclusioni* (that is directly supported by data).

Editorials and manuscripts published in sections *Documents* and *Instruments*, do not require summaries. Any acknowledgements should be included at the end of the manuscript, before the references.

Authors should follow carefully the following instructions:

- divide the manuscript into headings (e.g. for experimental studies: Introduction, Method, Results, Discussion);
- underline in the text words and phrases which should be printed in italics;
- use before decimals a dot rather than a comma (English style) both in the text and in tables and figures (e.g. 0.08);
- cite in the text only the references that are included in the reference list. For articles by a single author, provide the surname and year of publication (e.g.: Reissland, 2000). For the articles published by two authors, provide both surnames, with the symbol '&' between them and the year of publication (e.g.: Evans & Huxley, 2001). For articles by more than two authors, provide only the first name followed by *et al.* and the year of publication (e.g. Atkinson *et al.*, 1997).
- if there is more than one reference by the same author(s) in the same year of publication, indicate this with letters a, b, c after year of publication both in the text and in the reference list (e.g.: Jones, 1999a; Jones, 1999b; etc.).

### REFERENCES

At the end of the paper, all the references should be listed according the Harvard style. Please follow the instructions below:

**Journal articles.** All the authors must be listed. Indicate the surname(s) followed by the initials of each author, year of publication (in paren-

thesis), title of article (capital initial letter only for the first word of title), Journal name (not abbreviated and underlined), volume number, first and last pages.

Bridges K., Goldberg D., Evans B. & Sharpe T. (1991). Determinants of somatization in primary care. *Psychological Medicine* 21, 473-483.

**Journal Supplement articles.** After the author(s), year of publication and title (see above), indicate title of supplement (underlined, capital first letters for all the title's words), editors' initials, journal name (not abbreviated), supplement number, volume number, first and last pages (with symbol pp.).

Martini P., Cecchini M., Corlito G., D'Arco A. & Nascimbeni P. (1985). A model of a single comprehensive mental health service for a catchment area: a community alternative to hospitalisation. In *Focus on the Italian Psychiatric Reform* (ed. C. Perris and D. Kemali), Acta Psychiatrica Scandinavica, Suppl. 316, vol. 71, pp. 95-120.

**Chapters from Books.** After the author(s), year of publication and title (see above), indicate the title of the book (underlined, capital first letters for all the title's words), authors' and editors' initials, first and last pages (see above), publishers and place of publication (with colon).

Klerman G. & Weissman M. (1989). Continuities and discontinuities in anxiety disorders. In *The Scope of Epidemiological Psychiatry* (ed. P. Williams, G. Wilkinson and K. Rawnsley), pp. 181-195. Routledge: London.

**Articles from Conference proceedings, Workshops, etc.**

## TABLES AND FIGURES

Indicate the desired position of the table or figure in the manuscript. Put tables on separate sheets, one to a page, and numbered consecutively with *Roman numbers*, with an appropriate heading. In the text, tables must be cited without abbreviations (e.g. table I).

Figures ready for reproduction can be attached to the manuscript. In the text they must be cited without abbreviations. All the figures (graphs, pictures, plans, etc.) must be numbered consecutively with *Arabic numbers* (e.g. figure 1). Each figure should be followed by a legend (title). Both figures and legends should be prepared on a separate sheet. On the back of each figure, the name of the first author of the manuscript should be indicated. **Only tables and figures which are considered essential, should be included.**

## GUIDELINES FOR AUTHORSHIP

(International Committee of Medical Journal Editors. *Uniform requirements for manuscripts submitted to biomedical journals*. Philadelphia, PA: ICMJE, 1993)

"All persons designated as authors should qualify for authorship. Each author should have participated sufficiently in the work to take public responsibility for the content.

Authorship credit should be based only on substantial contributions to 1) conception and design, or analysis and interpretation of data; and to 2) drafting the article or revising it critically for important intellectual content; and on 3) final approval of the version to be published. Conditions 1,2, and 3 must all be met. Participation solely in the acquisition of funding or the collection of data does not justify authorship. General supervision of the research group is not sufficient for authorship. Any part of an article critical to its main conclusions must be the responsibility of at least one author.

Editors may ask authors to describe what each contributed; this information may be published.

Increasingly, multicenter trials are attributed to a corporate author. All members of the group who are named as authors, either in the authorship position below or in a footnote, should fully meet the above criteria for authorship. Group members who do not meet these criteria should be listed, with their permission, in the Acknowledgements or in an appendix.

The order of authorship should be a joint decision of the co-authors. Because the order is assigned in different ways, its meaning cannot be inferred accurately unless it is stated by the authors. Authors may wish to explain the order of authorship in a footnote. In deciding on the order, authors should be aware that many journals limit the number of authors listed in the table of contents and that the U.S. National Library of Medicine (NLM) lists in MEDLINE only the first 24 plus the last author when there are more than 25 authors."

## FURTHER INFORMATION CONCERNING PAPERS ACCEPTED FOR PUBLICATION

Accepted papers will be returned (by e-mail) to the corresponding author for corrections and answers to editorial queries. The manuscript should be corrected and the final version sent to Dr. R. Fianco, Assistant Editor, by email and by surface mail (1 copy). **Publication will be delayed if corrections and changes made by authors are inaccurate**, so special attention to this process is requested.

The Publishers will send a final proof copy to the corresponding author. **Only typographical corrections are allowed.**

For each article, 15 free off prints will be provided. Extra off prints can be ordered when the final proof copy is returned.
