

Submission Deadline—September 1, 2019

Atomic Layer Deposition for Emerging Thin-film Materials and Applications

Since the 2000s, Atomic Layer Deposition (ALD) has been widely employed to fabricate thin-film materials for a large variety of applications in microelectronics, optoelectronics, catalysis, biomedicine, gas sensing, anti-corrosion coating, clean-energy technologies (batteries, fuel cells, supercapacitors, solar cells, etc.), and nano- and micro-electromechanical systems (N/MEMS). The characteristic merits of ALD include not only its superior controllability over film thickness, composition, and crystallinity, but also its unique capability for constructing conformal thin-film coatings on complex structures. These merits also underlie the fast expansions of ALD into new areas over the past decades, such as metal-organic frameworks, two-dimensional layered materials, single-atom catalysis, solid-state batteries, and so on. Along with these new research trends, more research efforts are urgently needed to develop new ALD precursors for new processes and novel nanostructured materials toward emerging applications in various areas.

The purpose of this Focus Issue is to provide a research forum to exchange the latest outcomes using ALD for emerging thin-film materials and explore the potentials of ALD materials for future applications.

Manuscripts are solicited in the following areas:

- ◆ New ALD processes
- ◆ ALD precursor chemistry
- ◆ Modeling and growth mechanisms of ALD
- ◆ Fabrication of novel nanostructures/nanocomposites by ALD (including MLD)
- ◆ Emerging applications of ALD materials
 - Microelectronics
 - N/MEMS
 - Optoelectronics and display applications
 - Clean energy technologies (batteries, fuel cells, solar cells, supercapacitors, etc.)
 - Catalysis
 - Sensors
 - Biomedical applications
 - Anti-corrosion coatings

GUEST EDITORS

Xinwei Wang, Peking University, China

Xiangbo (Henry) Meng, University of Arkansas, Fayetteville, USA

Jin-Seong Park, Hanyang University, Korea

MANUSCRIPT SUBMISSION

To be considered for this issue, new and previously unpublished results significant to the development of this field should be presented. The manuscripts must be submitted via the *JMR* electronic submission system by September 1, 2019. Manuscripts submitted after this deadline will not be considered for the issue due to time constraints on the review process. Please select “Focus issue: Atomic Layer Deposition for Emerging Thin-Film Materials and Applications” as the Focus Issue designation. **Note our manuscript submission minimum length of 3250 words, excluding figures, captions, and references, with at least 6 and no more than 10 figures and tables combined. Review articles may be longer but must be pre-approved by proposal to the Guest Editors via jmr@mrs.org. The proposal form and author instructions may be found at www.mrs.org/jmr-instructions.** All manuscripts will be reviewed in a normal but expedited fashion. Papers submitted by the deadline and subsequently accepted will be published in the Focus Issue. Other manuscripts that are acceptable but cannot be included in the issue will be scheduled for publication in a subsequent issue of *JMR*.

CALL FOR PAPERS

Submission Deadline—November 1, 2019

Heterogeneity in Beyond Graphene 2D Materials

Van der Waals (vdW) layered crystals and two-dimensional (2D) materials have shown remarkable physical and chemical properties, indicating a potentially large impact for future electronics and optoelectronics devices, as well as in quantum information science and energy applications. These atomically thin materials, however, also display remarkable heterogeneities and imperfections. At atomic scales, 2D sheets contain point defects including vacancies, intentional dopants, and impurities. At the mesoscopic level, these imperfections include misoriented grains and layers, mixed phases, strain and charge transfer induced by the substrate, adsorbates and the dielectric environment. While these heterogeneities are of manufacturing concern for controllable, uniform, and large area synthesis of these materials, they also present opportunities that could lead to new abilities in tailoring the functionalities of 2D and layered materials for future transformative technologies. To fully reveal these opportunities, a synergistic strategy to fundamentally study these 2D materials must be developed, and new characterization approaches must be found and implemented.

This JMR Focus Issue serves to report the latest advances in the area of 2D and layered materials, with emphasis on fundamentally understanding the role of heterogeneities in these materials and heterostructures on their mesoscopic properties and functionalities, the development of paths to control the formation of these heterogeneities through synthesis and processing, and the emerging properties that can be accessed and used in novel application.

Contributing papers are solicited in the following areas:

- ◆ Novel properties emerging from heterogeneity.
- ◆ Tailoring specific heterogeneities, such as phase, defect type, dopants, and heterostructures through controlled synthesis and processing
- ◆ Advances in the characterization of heterogeneity including spatially- and time-resolved spectroscopy and microscopy.
- ◆ Predictive modeling and theoretical simulation.

GUEST EDITORS

Kai Xiao, Oak Ridge National Laboratory, USA

Zakaria Y. Al Balushi, University of California, Berkeley, USA

CALL FOR PAPERS

CALL FOR PAPERS

Call for Papers: Polymers/Soft Matter

Our understanding of soft matter, and composites that include soft matter, is advancing rapidly. Such materials include nanostructure materials, functional materials, and dielectric, thermal, and structural materials. Applications for these materials have been growing across a wide spectrum, in fields such as biomedical applications, energy storage, transmission, and conversion, lighting, and more. This is due in part to significant advances in characterization, synthesis, processing, and computation. *Journal of Materials Research* focuses on experimental and computation papers that report on the fundamental relationships between molecular structure and properties, morphology, and properties for both pure and hybrid materials.

Experimental or computational papers are solicited in the following areas:

- ◆ New polymers with tailored molecular structure to optimize properties
- ◆ Fundamental understanding of the relationship between morphology and properties
- ◆ Composite interface properties and behavior
- ◆ Materials for structural applications
- ◆ Materials for medical applications
- ◆ Materials for energy generation and transmission
- ◆ Materials for lighting applications

Journal of Materials Research publishes the latest advances about the creation of new materials and materials with novel functionalities, fundamental understanding of processes that control the response of materials, and development of materials with significant performance improvements relative to state of the art materials. *JMR* welcomes papers that highlight novel processing techniques, the application and development of new analytical tools, and interpretation of fundamental materials science to achieve enhanced materials properties and uses.

ASSOCIATE EDITOR FOR POLYMERIC MATERIALS

About the Materials Research Society

The Materials Research Society (MRS®) is a not-for-profit scientific association founded in 1973 to promote interdisciplinary goal-oriented basic research on materials of technological importance. Membership in the Society includes over 14,500 scientists from industrial, government, and university research laboratories in the United States and abroad.

The Society's interdisciplinary approach to the exchange of technical information is qualitatively different from that provided by single-discipline professional societies because it promotes technical exchange across the various fields of science affecting materials development. MRS sponsors two major international annual meetings encompassing many topical symposia, as well as numerous single-topic scientific meetings each year. It recognizes professional and technical excellence, conducts tutorials, and fosters technical exchange in various local geographical regions through Section activities and Student Chapters on university campuses.

Disclaimer: Authors of each article appearing in this Journal are solely responsible for all contents in their article(s) including accuracy of the facts, statements, and citing resources. Facts and opinions are solely the personal statements of the respective authors and do not necessarily represent the views of the editors, the Materials Research Society, or Cambridge University Press.

MRS journals maintain a proud tradition of editorial excellence in scientific literature. The *Journal of Materials Research*, the archival journal spanning fundamental developments in materials science, is published twenty-four times a year by MRS and Cambridge University Press. *MRS Bulletin* is a premier source for comprehensive research trends and a timely scan of professional activities. *MRS Communications* is a full-color letters and perspectives journal focused on groundbreaking work across the spectrum of materials research. *MRS Energy & Sustainability*—publishes reviews on key topics in materials research and development as they relate to energy and sustainability. *MRS Advances* is a peer-reviewed online-only journal featuring impactful and emerging research, designed to reflect the way materials researchers work, write, publish and share their results.

The *Journal of Materials Research* is free electronically to all MRS regular and student members. See inside front cover for subscription rates for *Journal of Materials Research*.

MRS is an Affiliated Society of the American Institute of Physics and participates in the international arena of materials research through associations with professional organizations.

For further information on the Society's activities, contact MRS Headquarters, 506 Keystone Drive, Warrendale, PA 15086-7573; telephone (724) 779-3003; fax (724) 779-8313.
