Decca/Omnitrac-pictorial navigation in three dimensions

Only Decca/Omnitrac provides accurate three dimensional navigation. The system incorporates a closed-loop servo-driven display head providing a track trace on conventional charts and is the first system to offer vertical guidance readout.

Closed loop

Digital servos continuously compare navaid position co-ordinates with corresponding outputs from the computer/display system, not only eliminating the need for manual chart setting, but ensuring complete integrity since the display will reset and update itself, automatically, without error, even after interruption in the drive to the display head. Ordinary, or 'open loop' displays can, without warning to the pilot give false position indication, arising from malfunction due, for example, to increased friction or handling.

Track trace

One glance at the track trace on the Decca display head tells the pilot not only where he is, but also where he's come from, and the rate at which he is approaching his desired track. He can thus determine navigational trends without the need to integrate successive plot indications. After use the track trace can be quickly erased or photo-printed for the record. With the Decca track trace after only one or two practice runs pilots make smooth, accurate instrument approaches to within one mile of touchdown.

Vertical guidance

Vertical guidance is programmed into the Omnitrac computer, for display on the Flight Director. When altitudes required at waypoints along the route are set into the computer, information is displayed in one of two ways:

EN ROUTE Commands for climb or descent are displayed until the programmed altitude is attained.

APPROACH The difference in altitude and distance between two successive waypoints is used to define a flight path or 'glide slope'. In this way multiple routes free the pilot from point to point navigation and an extremely accurate flight profile can be maintained, regardless of terrain features and weather. Only Decca has real experience with pictorial displays—over 2½ million flying hours by BEA alone

We're flying our own kite.

This aircraft is flown by members of the Shell-Mex and B.P. Aviation Unit. They fly to places as far apart as Kirkwall in the Orkneys, to Jersey in the Channel Islands; from Ipswich to Shannon. In fact, to any airport or airfield in the British Isles; to ensure our high standard of quality control and service is maintained. Like any other aircraft, whether commercial or private, this aeroplane can never be far from Shell and BP Aviation Services. You'll find us at over seventy airfields. Which all goes to show that no matter what you fly, we can take care of you. So we feel justified in flying our own kite.

Safety in the air — care of Shell-Mex and B.P.

NOW FABsil H.S. for the Trident Three!

FABsil H.S. the new High Strength Silicone Elastomer has been approved and specified for Cable Identification Markers by Hawker Siddeley Aviation Ltd. and British European Airways Ltd. for use on the Trident Three Jet Airliner.

Further particulars from:

Siegrist's FABsil H.S. Cable markers have Heat Resistance, Elasticity, Tensile Strength, Fire Retardance, and are proof against many fuels, particularly Skydrol 500A. They have many properties not found in any other type of cable marker.

Production Research

We have an interesting and rewarding job for an Engineer who is self-motivated, creative and inventive; who likes working on his own but who can get results through other people.

He will be an honours graduate or equivalent, preferably in the range 25 to 35 years with a bias towards Production Engineering and with experience of medium and large volume production.

In the short term he will be involved in assignments aimed at reducing unit production costs through modifications to existing machinery, working methods and production processes. In the long term he will be seeking to evolve revolutionary changes in concepts of storage battery manufacture.

He will have the support of professional colleagues in all the related disciplines of physics, chemistry and metallurgy and an opportunity to study the techniques of other leading manufacturers throughout the world.

Salary will be negotiable but it is unlikely that anyone earning less than £2,000 p.a. will have the ability which we are seeking. If you are interested and would like to learn more about this job please contact: D. Swift, Chloride Overseas Limited, 20-26 Wellesley Road, Croydon CR9 2BQ, giving details of your age, qualifications, experience and present salary.

Portrait of a happy marriage

Barometric airspeed indication and servoed digital mach read-out are happily united in this Combined Mach Airspeed Indicator—another contribution by Smiths Industries Aviation Division to clearer and more compact instrumentation. The display includes large 3 digit mach counter, single airspeed pointer and maximum safe operating airspeed (Vmo) pointer. Autothrottle coupling facilities and, if required, adjustable speed index 'bugs' can be provided. Variants with alternative mach and

airspeed ranges and metric calibration are available. The instrument has TSO.C46 approval. The comprehensive range of Smiths airspeed displays also includes conventional Mach Airspeed Indicators. These barometric instruments have Vmo pointers and autothrottle coupling facilities. Smiths Mach Airspeed Indicators are housed in 3ATI cases, have integral lighting and are being supplied to Boeing for 707 and 737 aircraft.
