University of Bristol

The University invites applications for appointment to the Sir George White Chair of Aeronautical Engineering which will become vacant on 1st August 1973.

The present research interests within the Department of Aeronautical Engineering range over fluid flow, structures and dynamics.

Candidates are invited to submit applications, including the names of three referees, to the undersigned, from whom further particulars may be obtained, not later than 31st December 1972.

H. C. Butterfield
Registrar and Secretary.

Advertisements for inclusion in this section are charged at ordinary displayed advertisement rates. (Page £110, $\frac{1}{2}$ page £70, $\frac{1}{4}$ page £50. Odd sizes are charged at £8 psci (min 3 in) part of inch counting as full inch.)

Where size is not specified on order, the advertisement will be set to nearest appropriate standard size. Where type sizes and styles are not specified on copy, copy will be laid out and set in accordance with the usual House setting styles.

Orders and copy should be sent to the **Advertisement Offices**, The Aeronautical Journal of the Royal Aeronautical Society, 184 Fleet Street, London EC4, by the 18th of the preceding month.

Remittances—Cheques and postal orders should be made payable to the Aeronautical Journal of the Royal Aeronautical Society, 184 Fleet Street, London EC4.

The Society reserves the right to decline any copy or advertisement at its discretion and accepts no responsibility for delay in publication or for clerical or printer's errors, although every care is taken to avoid mistakes.

The Royal Aeronautical Society

FOUNDED 1866

INCORPORATED BY ROYAL CHARTER 1949

Patron: HER MAJESTY THE QUEEN

COUNCIL

President: K. G. WILKINSON, BSc, DIC, FCGI, CEng, FRAeS

President-Elect: DR. G. S. HISLOP, PhD, BSc, ARCST, CEng, FRAeS

Vice-Presidents:

B. P. LAIGHT, OBE, MSc, CEng, FRAeS
AIR VICE-MARSHAL C. N. S. PRINGLE, CBE, MA, CEng, FRAeS
C. ABELL, OBE, CEng, FRAeS

Past Presidents:

AIR COMMODORE F. R. BANKS, CB, OBE, HonCGIA, CEng, HonFAIAA, HonFRAeS,
RAF (retd)
AIR COMMODORE J. R. MORGAN, OBE, BSc(Eng), CEng, FRAeS, RAF (retd).
S. D. DAVIES, CBE, BSc(Eng), CEng, FRAeS

Members:

CAPTAIN E. C. BEARD, CBE, CEng, FRAeS, RN(retd)
M. J. BRENNAN, BSc, CEng, FRAeS
F. R. J. BRITTON, CBE, AFRAeS
D. G. BROWN, BSc, DIC, CEng, FRAeS
SQN. LDR. D. W. BUTLER, AFC, AFRAeS, (*President, Rhodesia Division*)
SIR ROBERT COCKBURN, KBE, CB, MSc, PhD, CEng, HonFRAeS
DR. L. F. CRABTREE, BSc, DIC, PhD, CEng, AFRAIAA, FRAeS
M. G. FARLEY, CEng, FRAeS
I. B. FLEMING, OBE, BE, MSc, CEng, FRAeS (*President, Australian Division*)
K. R. FREEMAN (*Chairman, Graduates' and Students' Section*)
DR. W. F. HILTON, PhD, DSc, CEng, AFRAIAA, FRAeS
G. R. JEFFERSON, CBE, BSc(Eng), CEng, FRAeS
PROFESSOR K. L. C. LEGG, DCAe, BSc(Eng), CEng, FRAeS
G. M. MOSS, DCAe, CEng, AFRAeS (*Co-opted*)
DR. E. S. MOULT, CBE, BSc, CEng, FRAeS
W. N. NEAT, MA, CEng, FRAeS
G. K. C. PARDOE, BSc(Eng), DLC, CEng, FRAeS (*Chairman, Astronautics and Guided Flight Section*)
J. T. STAMPER, MA, CEng, FRAeS
A. H. STRATFORD, BSc(Eng), CEng, FRAeS
DR. A. M. THOMPSON, PhD, BSc(Eng), GradRAeS
G. T. WANSBROUGH-WHITE, ARAeS
GROUP CAPTAIN G. E. WATT, CBE, AFC, BE, DIC, CEng, FRAeS (*President, New Zealand Division*)
DR. H. F. WINNY, BSc, PhD, CEng, FRAeS (*Chairman, Rotorcraft Section*)
N. H. WOOD, DCAe, CEng, AFRAeS
G. P. D. WORTHINGTON, CEng, AFRAeS (*President, Southern Africa Division*)
H. ZEFFERT, CEng, FRAeS

Officers:

Hon. Treasurer: C. F. HUGHESDON, AFC, FRAeS
Solicitor: L. A. WINGFIELD, MC, DFC (*Hon Companion*)
Secretary: A. M. BALLANTYNE, OBE, TD, PhD, BSc, CEng, HonFCASI, FAIAA, FRAeS

Note: The President of each Division and the Chairman of each Section of the Society is a Member of the Council.

TEST PILOTS' GROUP REPRINTS

The following is a list of the Test Pilots' Group lectures that have been printed in the *Journal*. Most of them are available as Reprints.

Bedford, A. W.	The Role of the Test Pilot	June 1964
Henderson, Sqn. Ldr. J. M.	Low-Speed Handling of a Slender Delta (HP115)	May 1965
White, Lt. Col. R. M.	Flying the X-15	September 1965
Merewether, H. C. H.	Erect and Inverted Spinning with Particular Reference to the Hunter (Out of Print)		December 1965
Watts, Gp. Capt. R. A.	The Training of Test Pilots	June 1966
Trubshaw, E. B.	Low Speed Handling with Special Reference to the Super Stall	July 1966
Symposium	Flight Testing for the Certification of Civil Transport Aircraft	November 1967
Prahl, V. E.	A Résumé of the F-111 Flight Test Programme	January 1968
Gill, Sqn. Ldr. T. E.	Thoughts on Flight Instrument Presentations	June 1968

BUNTIN, W. D.	The Aeronautical Journal	RAeS	October 1972	LLOYD, P.	The Aeronautical Journal	RAeS	October 1972		
Concept and conduct of proof test of F-111 production aircraft	Rigorous structural proof testing is being conducted on each F-111 aircraft going into service. The test programme was developed subsequent to the loss of an F-111 while on a training mission in December 1969, caused by the failure of a major fitting which forms the inboard section of the pivoting wing. The failure was traced to a unique flaw which was generated during the manufacturing process and remained undetected. Proof testing and non-destructive inspection of each aircraft was undertaken to prevent similar failure in the F-111 fleets. This is an unprecedented step among military aircraft in the USA in preventing inflight structural failures which have plagued many of the military aircraft systems in service today.	The Aeronautical Journal	RAeS	October 1972	WHITE, E. A. and WILDE, G. L.	The Aeronautical Journal	RAeS	October 1972	
The aeroplane as a threat to the environment	Aeroplanes are often noisy, sometimes smelly and some of them also produce smoke. The purpose of this paper is to attempt an assessment of these and other forms of environmental pollution, also to consider the engineering and administrative measures which are being taken to control them. However, one must try to put the matter in perspective. The threat to the environment does not just come from aeroplanes, transport systems, factories or advancing technology—it comes from man.	The Aeronautical Journal	RAeS	October 1972	Engines for civil V/STOL	It is over ten years since practical VTOL by direct jet lift was first demonstrated. Since then many experimental V/STOL aircraft for both military and civil roles have been built or studied around the world, but it seems that a further decade must pass before a sophisticated V/STOL public transport system can be in use. The first priorities of such a system must be the reduction in noise and the relief of congestion around present-day airports and the indications are that these requirements will initially be met by STOL aircraft. The reduction in take-off and landing distances is synonymous with reduced take-off and landing speeds, and the engine designer can play a major role either by providing direct lift or by assisting in the achievement of high wing lift. This paper identifies the major project engine proposals for both VTOL and STOL applications that have resulted from work in the UK.	The Aeronautical Journal	RAeS	October 1972
Scar tissue and aircraft propulsion development	Involvement with the development of an aircraft engine can create deep mental scars. This paper provides, on the basis of one man's scar tissue, some guidance in creating an environment to encourage success. The introduction defines the general size and importance of the problem and the resources applied to the paper. The problems of organisation are outlined followed by a definition of the game rules. The problems line people must overcome are discussed, and the paper ends with a suggested approach to the technical portion of the problem.	The Aeronautical Journal	RAeS	October 1972					

Aircraft Structures for Engineering Students

T. H. G. MEGSON

This is an undergraduate textbook for students of Aeronautical Engineering, covering the subject from second year to final examination. It spans the fundamentals of elasticity and aircraft structural analysis and the associated topics of air worthiness and aeroelasticity. SI units are employed throughout, and worked examples are used extensively. Several unworked examples are also given at the end of each chapter.

£6 net.

Aerodynamics for Engineering Students

Second Edition

E. L. HOUGHTON and A. E. BROCK

"This book is intended for students of Aeronautical Engineering and adequately covers the requirements of the Higher National Certificate and Diploma Courses, Parts I and II of the University of London B.Sc.(Eng.) Degree, and the first three years of the Hives Council Diploma of Technology. Without hesitation, this is a "number one" book for engineering students." *The Aeronautical Journal* review of the first edition. The second edition has been up-dated and presented in SI units.

£4.40 net.

Tables for the Compressible Flow of Dry Air

Second Edition

E. L. HOUGHTON and A. E. BROCK

For use with any system of units, this is a useful tool for aerodynamicists.

£1.10 net.

Further Aerodynamics for Engineering Students

E. L. HOUGHTON and R. P. BOSWELL

"The authors are to be congratulated on a lucid presentation of a difficult subject and their work will be clearly understood by the student with a high standard of ability in applied mathematics." *Technical Journal*.

£8.50 net.

EDWARD ARNOLD

Cranfield Institute of Technology

One week residential
short course on

OPTIMUM STRUCTURAL DESIGN

20th-24th November 1972

The course aims to introduce basic concepts of optimum design in a straightforward manner and gives particular emphasis to practical engineering applications.

Further information and enrolment forms from:

Cranfield Institute of Technology,
Cranfield,
Bedford**

Telephone: Bedford 51551 Ext. 284
Telex: 825072

QUEEN MARY COLLEGE

University of London

DEPARTMENT OF AERONAUTICAL ENGINEERING

SENIOR RESEARCH ASSISTANT required to work on theoretical aspects of aircraft stall, part of an S.R.C. sponsored project extending over three years. Post-graduate experience essential. Salary scale £2238 p.a., plus £162 London Allowance. Further details from: Professor G. J. Hancock, Department of Aeronautical Engineering, Queen Mary College, Mile End Road, London E1 4NS.

CARPETS

for aircraft, passenger reception, airline offices, flying clubs, etc.

All leading makes of Branded Carpets

WILTONS • AXMINSTERS • TUFTED • ORIENTALS
at Highly Competitive contract prices

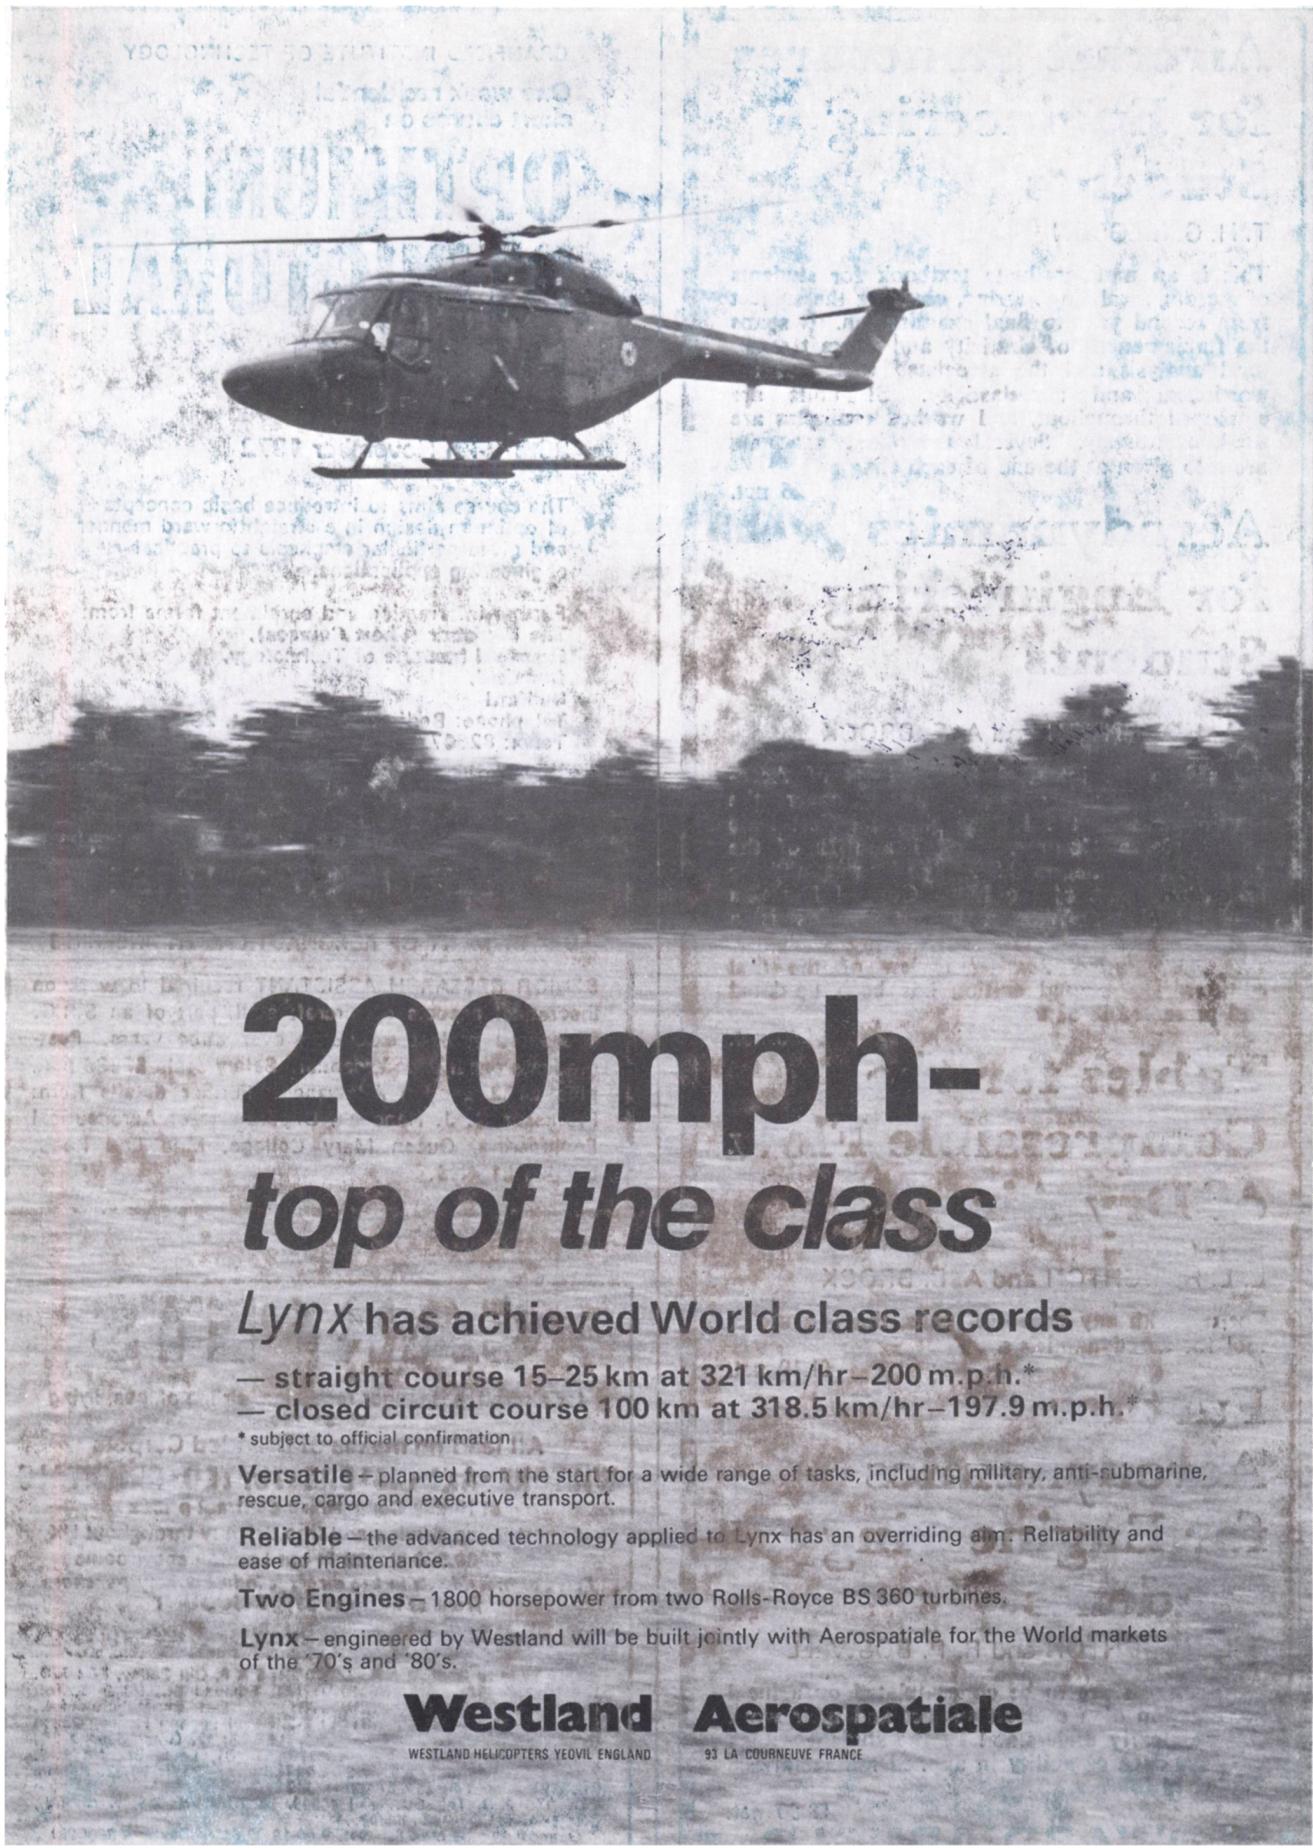

Expert fitting service and free delivery throughout UK

Over £200,000 stocks in our London showrooms

Private individuals in the aircraft industry may purchase
from us at up to 30% DISCOUNT

200mph- *top of the class*

Lynx has achieved World class records

- straight course 15–25 km at 321 km/hr—200 m.p.h.*
- closed circuit course 100 km at 318.5 km/hr—197.9 m.p.h.*

* subject to official confirmation

Versatile — planned from the start for a wide range of tasks, including military, anti-submarine, rescue, cargo and executive transport.

Reliable — the advanced technology applied to Lynx has an overriding aim: Reliability and ease of maintenance.

Two Engines — 1800 horsepower from two Rolls-Royce BS 360 turbines.

Lynx — engineered by Westland will be built jointly with Aerospatiale for the World markets of the '70's and '80's.
