

INFORMATION FOR AUTHORS

The BULLETIN of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented as not to require revision and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection, as the Editors receive more than three times the material that can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found from The London Mathematical Society and The American Mathematical Society. Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 2000 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews or on the web at <http://www.ams.org/msc>.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The BULLETIN is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$ (we accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$) and submit text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Topology of four-manifolds with special homotopy groups	
Alberto Cavicchioli and Fulvia Spaggiari	321
On a boundary value problem arising in elastic deflection theory	
Xiuqin Wang	337
New interpolation theorems related to the space BMO_A on spaces of homogeneous type	
Qi-hui Zhang and Da-ping Ni	347
On slant curves in Sasakian 3-manifolds	
Jong Taek Cho, Jun-ichi Inoguchi and Ji-eun Lee	359
Duality and Lagrange multipliers for nonsmooth multiobjective programming	
Houchun Zhou and Wenyu Sun	369
Extended Cesàro operator between some holomorphic functions spaces	
Xiaofen Lv	385
Congruences on semigroups generated by injective nilpotent transformations	
M. Paula O. Marques-Smith and R.P. Sullivan	393
On strong convex compactness property of spaces of nonlinear operators	
Xueli Song and Jigen Peng	411
A generalised Lucasian primality test	
Zhenxiang Zhang, Weiping Zhou and Xianbei Liu	419
Packing dimension and measure of homogeneous Cantor sets	
H.K. Baek	443
On approximation properties of the parabolic potential	
Simten, B. Uyhan, A.D. Gadjiev and Ilham A. Aliev	449
Indépendance algébrique de logarithmes en caractéristique P	
Laurent Denis	461
Bounds for the normalised Jensen functional	
Sever S. Dragomir	471

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Explicit endomorphisms and correspondences	
Benjamin Smith	479
