

Research currently in progress in the eastern region of the U.S. (area 1) is reported in the following section.

## CURRENT RESEARCH INVENTORY

---

THE SOCIAL SCIENCE RESEARCH LISTED IN THE FOLLOWING SECTION COVERS projects now in progress at institutions in the Eastern region of the United States and projects undertaken by a number of U.S. agencies and international organizations. Also included is a supplementary listing of projects reported by institutions from the Far Western region of the U.S., Canada, and Latin America which were received too late to be included in the last issue of the *Review*, Volume Two, Number 3.

Since this issue, Volume Three, Number 1, inaugurates the third cycle of current research coverage, we thought it might be helpful to our readers if we reviewed the principles and procedures used in compiling this section. The following description attempts to do this in a general way.

### *Purpose*

The basic purpose of the Current Research Inventory section is to acquaint researchers working in the Latin American area with various other social science projects currently being carried out in this field. It is hoped that this information will provide an impetus toward communication among scholars concerning their own work and at the same time reduce needless duplication.

This section is concerned only with *unpublished, on-going* research. Once the material is published it becomes generally available and publicized through various means. (*The Handbook of Latin American Studies* regularly informs readers of the latest works published.) As a convenience to our readers, we do list the publisher and date of publication when the researcher has made definite plans to have his research printed, but the inclusion of a project in the Research Inventory section is not dependent on whether or not the research is intended for publication. For similar reasons research undertaken to fulfill requirements for a Master's or Doctoral degree is not included in the Inventory. Most theses and dissertations can be located and consulted after they have been completed and approved. Furthermore, the amount of space needed to cover this large volume of work makes the listing of on-going pre-doctoral work a practical impossibility.

## *Latin American Research Review*

### *Geographical Division*

The Current Research Inventory section of LARR covers research on Latin America currently underway in the United States, Latin America and Canada.\* Coverage is divided into geographical areas which correspond to the three numbers of each yearly volume of the *Review*:

Fall Issue—the eastern region of the U.S.; governmental agencies of the U.S. and international organizations.

Spring Issue—The mid-western region of the U.S. and the northern tier of Latin America (including the Caribbean area, Central America, Mexico, Venezuela and Colombia).

Summer Issue—The far-western region of the U.S., Canada, and the southern tier of Latin America (including Argentina, Bolivia, Brazil, Chile, Ecuador, Paraguay, Peru and Uruguay).

To provide for institutions or individuals whose research reports reach this office too late to be published in the assigned issue, a supplementary listing section is included in each Research Inventory.

### *Coverage of research previously listed*

Continuing research projects are listed repeatedly. Each researcher is sent a photostat copy of his previously reported research when his particular geographical area is being surveyed. If he indicates that the research is continuing, his project is listed by researcher(s) name and the title of the project under the particular institution with which he is affiliated. The reader is referred to the first listing (volume, number and item number) for the description or summary of the project. Only if the researcher requests a change which reflects a basic departure from his original description is this change incorporated into the second and following listings..

### *Sources used for Research Listing*

The basic source for the research items reported in this section is the in-

\* For information about research being carried out in Europe see, *Boletín Informativo sobre Estudios Latinoamericanos*, published by Centro de Estudios y Documentación Latinoamericanos at the University of Amsterdam in Holland; for research on Latin America originating in German universities see *Informationsdienst der Arbeitsgemeinschaft der Deutschen Lateinamerika-Institute* (Köln, Germany). Research originating in Europe, Latin America and the United States, arranged according to designated topics may be found in *Aportes*, a quarterly published by Instituto Latinoamericano de Relaciones Internacionales in Paris, France. *América Latina*, published by The Centro Latino-Americano de Pesquisas em Ciências Sociais (Rio de Janeiro), covers research originating in Latin America. *Desarrollo Económico* published by El Instituto de Desarrollo Económico y Social (Buenos Aires), reports regularly on research being carried out by sociologists in Argentina; and archaeological research in Latin America is reported in the Current Research section of the *American Antiquity* published by the Society for American Archaeology.

formation submitted on the completed questionnaire sent back to us by a particular researcher or institution. Various periodicals and reports are canvassed to locate the names and addresses of individuals who are currently involved on research projects dealing with Latin America. These individuals are then sent questionnaires. Occasionally the information culled from the articles or reports is used as the sole source for research listing; when this occurs, the title of the report or periodical used is always given.

Questionnaires may be obtained by request. Such requests are appreciated and the forms will be sent out immediately.

An Historical Review of Mexican Agricultural Policy, 1925–1964.

A study of the factors which have made it possible for Mexico to average an approximate five percent rate of growth in crop production. However, the concentration of effort and programs to a limited number of regions and to a selected group of farmers, while demonstrating the power of technical developments in agricultural growth, has also resulted in a concentration of the benefits of this growth to a relatively small number of farmers. A central problem faced today is how to broaden the base from which agricultural output is generated without reducing the growth rate of output.

Culture Conflict and Development in Northeastern Guatemala.

Though the Izabal region was on the main communications route between the Guatemalan highlands and the coast during colonial days, it remains but slightly populated, and many of its resources continue untapped. Isolated cases of successful colonization indicate that highland peasants readily adapt to life in the region. The land holding pattern discourages their attempts to do so, however. The Spanish control land and Kekchi peasants control labor. Since each of these groups wishes to utilize these two basic resources according to its own system of values, a development stalemate has resulted. Begun, 1965. EDC, 1967. External Factors in the Economic Development of Brazil's Heartland: the Center-South, 1880-1930.

A study of the center-south which was initially transformed and shaped by international commodity, capital, and labor markets. Exports, borrowing abroad, foreign direct investments, and immigration were interdependent and mutually supporting factors. The system rested precariously on the world price of Brazilian

coffee. The factors facilitating this region's industrial revolution—abundant electric power, transportation and communication lines, labor and entrepreneurial resources, and important urban centers were largely created between 1880 and 1930. Begun, 1966. Research completed. To be published in *Proceedings of the Colloquium on the Modernization of Brazil* by Louisiana State University Press.

The Development of Brazil and the International Economy.

Aim of the study is to illuminate the development of Brazil in the context of the international economy from the mid-19th century to the present. The coffee "export economy" (1850-1930) gave way to an "investment-government expenditure" economy (from the bottom of the Great Depression to the ouster of the Goulart regime.) This second phase, characterized by the single-minded cultivation of the domestic economy, has in turn given way to policies aimed at systematic use of international trade, external borrowing, and foreign direct investment to modernize Brazil. Human Resources of the Department of Valle del Cuaca: Demographic Aspects.

Principal purpose of project is to construct a comprehensive picture of the population of the department using all available census and vital statistics data. Report will serve as a basic resource document for other research investigations, including those in education, human resources, and the labor force; in addition, the publication should prove significant for all those concerned with planning. The census and vital statistics data will be analyzed in accordance with a model developed by T. Lynn Smith, (*Fundamentals of Population Study*). Vida comunitaria de Quito.

La investigación comprende el estudio de 12 indicadores: población, vivienda, salud, nivel de vida de los pobladores, fuentes de ingresos, ocupación, instrucción, recreación, organizaciones existentes en la Parroquia, líderes, y el lenguaje común utilizado. La investigación se realiza en vista de mejorar las condiciones de vida cultural, social y económica de la población urbana; integrar la vida de los habitantes y de las más pequeñas comunidades urbanas dentro de las formas más amplias de vida comunitaria de la ciudad y hacerles capaces de contribuir, tanto cuanto sea posible, al desarrollo urbano en general y al desarrollo
