

CAMBRIDGE

Combinatorics: Topics, Techniques, Algorithms

PETER J. CAMERON

A textbook in combinatorics for second-year undergraduate to beginning graduate students. It stresses common techniques (such as generating functions and recursive construction) which underlie the great variety of subject matter, and the fact that a constructive or algorithmic proof is more valuable than an existence proof.

£35.00 net Hardback 0 521 45133 7 368 pp.

Surveys in Combinatorics, 1993

Edited by K. WALKER

This volume comprises the invited lectures given at the 14th British Combinatorial Conference. The lectures survey many topical areas of current research activity in combinatorics and its applications, and also provide a valuable overview of the subject, for both mathematicians and computer scientists.

£22.95 net Paperback 0 521 44857 3 295 pp.

London Mathematical Society Lecture Note Series 187

Complexity: Knots, Colourings and Counting

DOMINIC WELSH

These notes are based on a series of lectures given at the Advanced Research Institute of Discrete Applied Mathematics in June 1991. Their aim is to link together algorithmic problems arising in knot theory, statistical physics and classical combinatorics. To researchers in discrete mathematics, computer science, and statistical physics, this book will be of great interest.

£19.95 net Paperback 0 521 45740 8 171 pp.

London Mathematical Society Lecture Note Series 186

Efficient Algorithms for Listing Combinatorial Structures

LESLIE ANN GOLDBERG

This thesis, winner of a distinguished dissertation award, is concerned with the design of efficient algorithms for listing combinatorial structures. The research described here will be of interest to combinatorialists and theoretical computer scientists.

£27.95 net HB 0 521 45021 7 176 pp.

Distinguished Dissertations in Computer Science 5

Information Dispersal and Parallel Computation

Y-D. LYUU

In 1989, Michael Rabin proposed a fundamentally new approach to the problems of fault-tolerant routing and memory management in parallel computation, based on the idea of information dispersal. Yuh-Dauh Lyuu develops this idea in a number of new and exciting ways in this extended and updated printing of his PhD thesis.

Mathematical Structures in Computer Science

Editor-in-Chief

G. Longo, *Laboratoire d'Informatique (CNRS) et DMI, Ecole Normale Supérieure, 45 rue d'Ulm, 75005, Paris (email: longo@dm.ens.fr)*

Associate Editors

P. L. Curien, *LIENS, 45 rue d'Ulm, 75230 Paris (email: curien@dm.ens.fr)*

A. M. Pitts, *Computer Laboratory, University of Cambridge, Pembroke St, Cambridge CB2 3QG*

Mathematical Structures in Computer Science (MSCS) is a new journal of excellence in theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal bridges the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from algebra, geometry or category theory form a basis for the work.

MSCS is distinct from existing titles in that it specialises in the art of applying mathematics of genuine interest and general applicability to computer science; its objective is to promote the useful application of high level mathematics to language design and software implementation. The journal increases the circulation of new results in this fast growing area.

Essential reading for:

- Mathematicians with interests in computer science
- Theoretical computer scientists
- Computer scientists working in language development or formal methods

Instructions for Authors

Editorial policy The journal welcomes submissions in any of the areas of Combinatorics, Probability, or Computer Science, not just those dealing explicitly with relations between the three. Its scope covers combinatorics in a broad sense, including classical and algebraic graph theory, probabilistic methods, random structures, combinatorial probability and limit theorems for random combinatorial structures; and the theory of algorithms, including complexity theory, randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

Submission of manuscripts Papers may be submitted to any member of the Editorial Board. Three copies should be sent accompanied by the author's address, telephone and fax number, and if possible, an electronic mailing address. The publisher encourages submission of manuscripts written in LaTeX, for which a cpc style can be obtained from the editors upon acceptance of their paper. Papers submitted in Plain TeX or AMS TeX, using the 'article style' are also welcomed. Such papers may be submitted electronically by sending a file to cpc@pmms.cam.ac.uk; this file should, if possible, include all line figures. When submitting the revised/final version of their paper, authors may send disks (Apple Mac or PC) containing the TeX source code plus any macros and other relevant details to the editorial office; it is not possible to accept final versions of papers electronically. These should correspond exactly to the hardcopy manuscript accepted for publication. Disks will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

Layout of conventional manuscripts Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

Illustrations Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

References References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included. In the text, references should be cited as [1].

Proof reading Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints 50 offprints of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher if ordered at proof stage.
