## NOTES FOR CONTRIBUTORS

CONTRIBUTIONS will be welcomed from scientists of all nationalities, but must be written in English, with an English summary. An additional summary in French, German, Russian or Italian will be accepted. Papers should be sent to the Executive Editor, Dr. E. C. R. Reeve, Institute of Animal Genetics, West Mains Road, Edinburgh 9.

GENERAL. Submission of a paper will be taken to imply that it is unpublished and is not being considered for publication elsewhere. Papers published in *Genetical Research* may not be reprinted or published in translation without permission from the Editorial Board. Papers should be as concise as clarity permits, and illustrations kept as few as possible.

SHORT PAPERS. This category is designed for concisely written reports of work for which rapid publication is considered desirable. Such papers will normally be published within three months of receipt in acceptable form. They should not exceed 6 pages of print in length.

TYPESCRIPTS. A top copy and one carbon copy should be submitted. They should be typed with double-spacing, on one side of the paper, leaving margins of about 1½ inches at the left-hand side and head of each sheet. Quarto is preferred to foolscap paper. Heavily corrected typescripts may have to be returned to the author for retyping. Papers should state the name and address of the author (or his proxy) to whom proofs are to be sent. The address of the laboratory at which the work was carried out will be printed with the authors' names at the head of the paper, and changes of address and sources of financial support may be added in footnotes.

A short title should be supplied for running headlines; this must not exceed 50 characters, counting each letter and space as one character.

Memoir of the Society for  
Endocrinology, 15

**Endocrine Genetics**

Edited by **DR S.G.SPICKETT**

In this symposium, endocrinologists, geneticists and biochemists discuss the genetic variation, both normal and pathological, in endocrine structure and function.

The three sections of the book deal with the mode of action of hormones, the major genetic variation in endocrine systems, and the quantitative variations in endocrine structure and function. The papers demonstrate the importance of relating genetical methods to work in endocrinology and physiology. A record of the discussion, after each paper, integrates and unifies the various approaches to the topics. *70s. net*

Experimental Biology, 21

**Aspects of the  
Biology of Ageing**

Edited by **H.W.WOOLHOUSE**

A symposium presenting current thought and experimental work on the fundamental biology of ageing processes at different levels of organization. It is concerned with ageing in micro-organisms and plants as well as in animals. The papers cover the fundamental genetic theory of ageing; problems of macromolecular structure and regeneration; radiation and ageing; cellular age-changes; and ageing processes in isolated organs and in intact organisms. *85s. net*
