

Electron Microscopy Sciences

Since our beginning close to 50 years ago, Electron Microscopy Sciences has been specializing in the manufacturing, preparation, and distribution of only the highest quality chemicals, supplies, and equipment, for microscopy and histology as well as all of its related fields.

Our steady and consistent growth has been based not only on our quality products and prompt friendly service, but also on the trust that our valued customers, have placed in us to give the best value in the market place.

To allow each of our current customers as well as new potential customers the ability to see all we have to offer not only do we continue to publish a 1200-page printed catalog but as well we have a complete interactive website that allows for ordering of all our items. We have also added an interactive digital catalog, which allows you to search our complete line without the bulkiness of the complete book.

The EMS catalog is the most complete collection of products for light microscopy, histology, and electron microscopy and general biological and materials research. With over 20,000 products in total, this catalog is truly an encyclopedia every lab should have on the shelf.

A lot has happened over the last few years. New technological achievements are here (EMS Cryo-Sem Preparation System, Graphene – the strongest material ever measured, LatticeAx Cleaving Systems, Nightsea Fluorescence Viewing Systems, Wet TEM and Wet SEM systems, and the EMS Freeze Substitution Kit to name a few). The way we communicate using new media continues to evolve as well (EMS is now on Facebook, Twitter, and YouTube). Even though all of these changes have taken place, one thing remains the same – our commitment to manufacturing and distributing the highest quality chemicals, supplies, equipment and accessories available to the Microscopy and Histology community today. In fact, our team is working harder than ever to provide you with friendly service, competitive pricing, accurate technical support and swift delivery.

In our web site and our digital catalog you can obtain the most up to date information on the microscopy and histology market, including products for biological sciences, materials science and histology. It should be noted that our main concern has never been just selling. So with this in mind we dedicate a good portion of our web site and digital catalog to helping you, our valued customer.

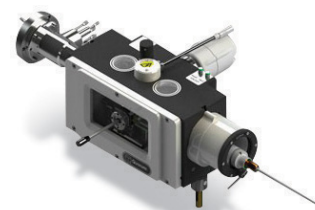

Many helpful items can be accessed such as MSDS's for the majority of our chemicals, technical tips, the newest recently published technical articles, as well as technical data sheets which will assist you in performing your job efficiently.

Because of our commitment to and close contact with the research community at large we are excited to announce the opening of our newest facility, the EMS Microscopy Academy. We firmly believe in the endless possibilities of learning and working together, so we have built a dedicated space where we can offer an ongoing series of workshops and training courses covering all fields of microscopy, including materials and biological science.

Here, just minutes from Philadelphia next to our extensive warehouse in Hatfield, PA, you can take advantage of state-of-the-art equipment and hands-on training led by our certified faculty and bring your career to the next level. Our spacious labs have been set up to provide you with what we sincerely hope will be a valuable learning experience, both practically and theoretically.

All of the Electron Microscopy Sciences employees are dedicated to providing you with friendly service, quality products, and competitive pricing that you so rightly deserve. This combination of concerned people, quality products, competitive pricing, and the capacity for hard work has earned us our outstanding name as a reputable manufacturer and distributor in the microscopy and histology community.
