“We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions.”—*British Medical Journal*, May 3, 1890.

LISTERINE

*A safe, non-poisonous, unirritating
antiseptic solution*

LISTERINE is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle, or douche, in catarrhal conditions of the nose and throat.

LISTERINE in proper dilution may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

LISTERINE embodies a two-fold antiseptic effect, in that after the evaporation of its volatile constituents—thyme, eucalyptus, mentha, gaultheria, and ethyl alcohol—a film of boracic and benzoic acids remains upon the surface to which Listerine has been applied, affording more prolonged antiseptic protection.

LISTERINE is a trustworthy surgical dressing; it has no injurious effect upon the tissues in which the healing process is going on.

LISTERINE in teaspoonful doses will often afford relief in fermentative dyspepsia, and is largely prescribed, with excellent results, in the various forms of diarrhoea occurring in infants and adults.

LISTERINE literature, including special pamphlets upon *Respiratory Diseases*, may be had, by physicians, upon application to

ADVERTISEMENTS.

An Improved Antiseptic Silver Compound

FOR THE TREATMENT OF INFLAMMATIONS OF MUCOUS MEMBRANE

PROSOSIL (P., D. & Co.) is a proteid silver compound containing about 20 per cent. of the metal.

It is in the form of lustrous scales, readily soluble in water. The solution is stable, is not precipitated by proteids or alkalies, or by any of the reagents which affect most other silver solutions, and when applied to mucous surfaces it does not cause coagulation of albuminous matter or the precipitation of chloride. It penetrates the tissues and destroys pathogenic bacteria.

Even so strong a solution as 1 in 2 is non-toxic and does not give rise to pain or irritation.

PROSOSIL exerts an antiseptic and astringent influence upon mucous surfaces. Its application is indicated in inflammatory conditions of the throat, nose, and ear, in solutions of various strengths, according to the condition to be treated.

PROSOSIL is supplied in bottles of $\frac{1}{2}$ ounce and 1 ounce, also in capsules containing 6 grains (a convenient quantity for preparing a little solution extemporaneously).

PROSOSIL OINTMENT (5 per cent.) is supplied in collapsible tubes with elongated nozzles.

THIS year's volume aims, like its predecessors, to be a faithful reflex of current Medical and Surgical thought. It is, therefore, of necessity coloured by the consideration of the many new problems which are thrust upon us by the War. These problems will confront the general Practitioner on every hand, and he must be prepared to deal with them.

Hence the current volume has a unique value, in that it furnishes the reader with a careful review of the latest achievements in War Surgery and Medicine, which will be of value now and in the years to come, and which cannot be obtained from any other source.

The civil side of the Practitioner's work has, of course, not been neglected.

The new "Annual" continues to be, as in the past, a digest of the best modern teaching culled by experts from the medical literature of the world.
