WHY GOVERNMENTS GROW

Measuring Public Sector Size

edited by **CHARLES LEWIS TAYLOR**,

Virginia Polytechnic Institute and State University

Published in cooperation with the International Political
Science Association and the International Institute for
Comparative Social Research, Berlin

Governments are growing too large—and should be cut down to size. Many people would agree with this statement, but there is less likely to be agreement about why governments grow and how much government is beneficial. A clearer concept of what we are measuring is needed. In *Why Governments Grow*, an international assembly of authors addresses this empirical and theoretical challenge. Original studies focus on procedures for measuring the growth of government and interpretations of relevant data. They look at actors ranging from semi-government entities such as contractors and charities to local, state, and federal bureaucracies; at indicators of the scope of government including public revenues and expenditures, the services performed by government, the number of laws enacted, and the degree to which regulations are enforced.

CONTENDING APPROACHES TO WORLD SYSTEM ANALYSIS

edited by WILLIAM R. THOMPSON,
Claremont Graduate School

World system analysis is an innovative, multidisciplinary approach that promises to transform our understanding of modern history. Its premise is that behavior at all levels, from the individual to the international, can best be explained in terms of global structures and processes. The authors in this book evaluate and critique the two major analytic strategies—the world-economy perspective and the long-cycle viewpoint—for conducting world system studies. Their debate illuminates the problems and potential of world system analysis—and is certain to interest researchers, scholars, and students in political science, economics, sociology, and history.

CONTENTS: Introduction: World System Analysis With and Without the Hyphen WILLIAM R. THOMPSON // **I. Accenting the Economic Dimension** // 1. World System in Crisis ANDRE GUNDER FRANK / 2.
