

THE A R BERGSTROM PRIZE IN ECONOMETRICS

Applications are now being sought for the recently established **A R Bergstrom Prize in Econometrics**.

The objective of the Prize is to reward the achievement of excellence in econometrics, as evidenced by a research paper in any area of econometrics. The Prize is open to New Zealand citizens or permanent residents of New Zealand who are under the age of 26 years on the closing date for applications. It is intended that the awardee will utilise the proceeds to assist in financing further study or research in econometrics in New Zealand or overseas.

The Prize will be awarded once every two years, with its value initially being \$1000. The selection committee will consist of Professors P C B Phillips, V B Hall and their nominees.

Applications/nominations must include:

- a formal letter of application and, in the case of students, a letter of nomination by their research adviser or chairperson
- 4 copies of a research paper written by a single author, reporting original research in any area of econometrics
- a CV and relevant academic transcripts

Applications should be sent, by **31 March 1992**, to:

Professor V B Hall
Dept of Economics
Victoria Univ. of Wgtn
P O Box 600 Wellington
NEW ZEALAND

The Prize is supported by funds generously provided by the following sponsors:

Institutional Sponsors

The New Zealand Association of Economists
The Faculty of Commerce and Economics at the University of Auckland
The Department of Economics at the University of Canterbury
The Faculty of Commerce and Administration at Victoria University of Wellington
Lincoln University
The Department of Economics and Marketing at Lincoln University

Personal Sponsors

V B Hall
P C B Phillips

In addition, royalties from the forthcoming Festschrift Volume *Models, Methods and Applications of Econometrics: Essays in Honour of Rex Bergstrom*, P C B Phillips (ed.), Oxford: Basil Blackwell, will be used to support the Prize.

Peasantry and Society in France Since 1789

Annie Moulin

M. C. and M. F. Cleary,
Translators

This book explores the principal problems and changes that have affected the French peasantry since 1789. Dr. Moulin examines the social, economic, and cultural evolution of the peasantry as a subsistence economy that has been replaced by commercialized, capitalist farming, and looks at the political consequences of the dramatic relative decline in the numerical importance of the French rural sector.

A Rural Society after the Black Death

Essex 1350–1525

Larry Poos

This study of rural social structure seeks to understand how, in the population collapse after the Black Death (1348–1349), a particular economic environment affected ordinary people's lives in the areas of migration, marriage, and employment, and also contributed to patterns of religious nonconformity, agrarian riots and unrest, and even rural housing.

Friends in Life and Death

British and Irish

Quakers, 1650–1900

Richard T. Vann and

David Everley

This volume looks at patterns of child-bearing, marriage and death among more than 8,000 Quaker families during the period of demographic transition. The authors show how high fertility and high mortality were features of English Quaker life, to be succeeded after 1825 by a move towards the modern, small family. Comparisons are drawn with the general population, other elite groups and the Irish Quakers.

39201-2 Hardcover \$49.50

Assimilation and Community

The Jews in Nineteenth-Century Europe

Jonathan Frankel and Steven J. Zipperstein, Editors

The historiography of this period has focused on the processes of accommodation and communal disintegration. The communal processes, as analyzed here, turn out to be far more complex. Traditional loyalties, new socio-ethnic structures, communal cohesion, romantic discoveries of the past, and the political solidarity engendered by the struggle for emancipation across Europe, all counterbalanced the homogenizing forces of modernity.

A Community Transformed

The Manor and Liberty of

Havering-atte-Bower, 1500–1620

Marjorie Keniston McIntosh

The author continues her study begun in *Autonomy and Community* (CUP, 1986), which covered the period 1200–1500. This book traces the changes that took place between 1500–1620 in demographic patterns, the economy, religion, social and cultural forms, and local administration and law. Abundant information on a wide range of questions makes this the most complex and richly drawn portrait of any English community in the Tudor era.

NOTES FOR CONTRIBUTORS

Contributions. Contributions are welcomed from all countries. They should be written in English.

Manuscripts. Four copies of manuscripts should be submitted to:

Peter C. B. Phillips
Editor, *Econometric Theory*
Cowles Foundation for Research
in Economics
Yale University
P.O. Box 2125 Yale Station
New Haven, Connecticut 06520-2125
U.S.A.

Manuscripts are accepted for review on the understanding that the same work has not been and will not be published nor is presently submitted elsewhere. While under editorial review, it is the responsibility of the authors to keep the Editor informed about submissions, publication plans and actual publication of related research or abstracts thereof in other outlets, including letters, journals, review publications, journals in other disciplines, conference proceedings and published dissertations. It is further understood that all persons listed as authors have given their approval for the submission of the paper and that any person cited as a source of personal communication has approved such citation; written authorization may be required at the Editor's discretion. Authors are responsible for obtaining written permission to publish material for which they do not own the copyright. Articles and other material published in *Econometric Theory* represent the opinions of the authors and should not be construed to reflect the opinions of the Editor, Advisory Board, Editorial Board or the Publisher.

Problems and Solutions Series. This series will publish student exercises in econometrics and research level problems. All problems must be submitted in triplicate with a clear title, relevant references and a complete solution to:

Professor Alberto Holly
Département d'économétrie
et d'économie politique
Université de Lausanne
École des HEC, BFSH,
1015 Lausanne-Dorigny
Lausanne, Switzerland

After publication of a problem, solutions are invited for publication in the following issue and will be selected on a competitive basis that takes into account the correctness, conciseness and elegance of the solution. All problems and solutions will be refereed.

Readers are also encouraged to write to the Editor with interesting unsolved problems for which only partial results are currently available, and to advise the Editor if they discover a published problem for which a solution already exists in the literature.

Preparation of Manuscript. The *entire* manuscript (including notes and references) should be typed double-spaced on 8½ × 11-inch or A4 white paper, with wide margins to accommo-

date copyediting. Manuscript pages should be numbered consecutively. *Page 1* should provide the article title, author's(s) names (in the form preferred for publication), complete affiliations and telephone numbers. At the bottom of *Page 1* place any footnotes to the title or authors, indicated by superscripts *, **, etc. *Page 2* should contain a proposed running head (abbreviated form of the title) of 40 characters or less, and the name and mailing address of the author to whom proofs should be sent. *Page 3* should contain a short abstract of the paper in less than 150 words. The Abstract will appear at the head of the article when published in the *Journal*.

Equations. All equations should be type-written and the numbers for displayed equations should be placed in parentheses in the right margin. References to equations should simply use the form "(3)". Superscripts and subscripts should be typed clearly above and below the line, respectively. Theorem, lemma and proposition statements should appear in italic print. End of proof signposts should appear as such: ■

Tables and Figures. Tables and figures should be numbered consecutively in a separate series. Every table or figure should have a title or caption and at least one reference in the text to indicate its appropriate location. Figures (charts, graphs, or other artwork) should be ready for photographic reproduction; they cannot be redrawn by the printer. All figure labels and details should be clearly printed and large enough to remain legible after a reduction to half size.

References. References should be cited in the text by the author's last name and the relevant number from the reference list or simply by number. Complete bibliographic information for each citation should be included in the list of references. Examples of correct style for bibliographic citation in the text are: Bergstrom [1]; ... equation (10) of [3]; in recent work [2,4]. References should be typed in alphabetical order in the style of the following examples:

1. Bergstrom, A. R. *Statistical inference in continuous time economic models*. Amsterdam: North Holland, 1976.
2. Granger, C. W. J. Generating mechanisms, models and causality. In W. Hildenbrand (ed.), *Advances in Econometrics*, Chapter 8 and pp. 237-253. New York: Cambridge University Press, 1983.
3. Herz, C. S. Bessel functions of matrix argument. *Annals of Mathematics* 61 (1955): 474-523.
4. Sargan, J. D. & A. Bhargava. Maximum likelihood estimation of regression models with first order moving average errors where the root lies on the unit circle. *Econometrica* 51 (1983): 799-820.

Journal names should *not* be abbreviated.

Footnotes. When more than a simple source citation is called for, footnotes may be used. These should be numbered consecutively

throughout the text and typed together on a separate page following references. Source citations within footnotes follow the same style as citations in the text.

Copyediting and Proofreading. The publisher reserves the right to copyedit and proofread all articles accepted for publication, but authors will be asked to review their manuscripts if changes have been substantial. Page proofs of articles will be sent to authors for corrections of typographical errors only.

Offprints. Authors receive 25 offprints of their article free of charge; additional numbers may be purchased if ordered at proof stage (an order form will be sent with proofs). Contributors will be asked to assign their copyrights, on certain conditions, to Cambridge University Press.

EDITORIAL POLICY. *Econometric Theory* aims to endow econometrics with an innovative and authoritative journal dedicated to advance theoretical research in econometrics. It will provide a centralized professional outlet for original theoretical contributions in all of the major areas of econometrics and it will seek to foster the multidisciplinary features of econometrics that extend beyond the subject of econometrics. Among the many aspects of econometrics to come within the scope of *ET* are the statistical theory of estimation, testing, prediction and decision procedures in traditionally active areas of research such as linear and nonlinear modeling, simultaneous equations theory, time series, studies of robustness, non-parametric methods, inference under misspecification, finite sample econometrics, limited dependent variable models, the treatment of panel data, and models of discrete choice. *ET* will provide a receptive arena for theoretical studies which open up new fields of research in econometrics and whose application potential is on a longer term horizon. Particularly welcome are papers which promote original econometric research in relation to modern developments in mathematical statistics and probability theory. Contributions which exhibit methodological and technical advance in these fields and which illustrate their potential in econometric research are actively encouraged. Articles which unify earlier econometric work either in productive ways or by the use of more elegant methods also lie within the scope of the *Journal*.

As well as articles that embody original theoretical research, *ET* will publish historical studies on the evolution of econometric thought and on the subject's major scholars. *ET* will also serve an educational role in econometrics by the inclusion of a "Problems and Solutions Series" and by the publication of pedagogical papers which deal explicitly with educational issues and which discuss new approaches to teaching econometrics.
