
FORTHCOMING PAPERS

- K. D. MAGILL, JR. Semigroup structures for families of functions, III, R_T^0 -semigroups
- H. A. BUCHDAHL & W. J. LAND The relativistic incompressible sphere
- M. VENKATARAMAN & T. SOUNDARARAJAN The field structure of the real number system
- T. J. DICKSON A sufficient condition for an extreme covering of n -space by spheres
- A. J. VAN DER POORTEN A note on the independence of the axioms for a vector space
- K. MAHLER An unsolved problem on the powers of $\frac{3}{2}$
- VISHWA CHANDER DUMIR One-sided inequality for non-homogeneous quaternary quadratic forms, I
- G. J. COOPER & J. W. CRAGGS A note on the propagation of plane waves in elastic and plastic solids
- VISHWA CHANDER DUMIR One-sided inequality for non-homogeneous quaternary quadratic forms, II
- D. F. LAWDEN Coordinate and momentum representations in quantum mechanics
- R. S. SMITH Infinite product expansions for matrix N -th roots
- B. KWEE The approximation of continuous functions by Riesz typical means of their Fourier series
- U. B. TEWARI A note on right invariant integrals on locally compact semi-groups
- G. SZEKERES Kinematic geometry; an axiomatic system for Minkowski space-time
- A. L. ANDREW A note on the Ritz method with an application to overtone stellar pulsation theory
- A. H. LOW Gravity effects in the initial value problem
- B. S. THORNTON Damping loss in a cascade of fluttering phased aerofoils
- STEPHEN GERIG Sequences of integers satisfying congruence relations and Pisot-Vijayaraghavan numbers
- A. RAN A non-embeddable composite of embeddable functions
- A. SHAFaat On the number of topologies definable for a finite set
- C. C. HEYDE A further generalization of the arc-sine law
- T. E. HALL Primitive homomorphic images of semigroups

Dynamics of linear systems / V. Doležal

The monograph provides electro-engineers, mathematicians and research scientists with a ready reference source for important recent advantages in the field of electrical distribution nets, electromechanical and automatized regulation systems etc. The work demonstrates the importance of these new mathematical methods for the solution of problems concerned with the dynamics of linear systems.

Forthcoming

Inelastic behaviour in shells / W. Olszak and A. Sawczuk

Survey of theoretical and experimental research.

This book surveys the main trends in the theory and research of inelastic shells. After recalling the fundamental field equations for inelastic solids, the main types of viscous and plastic response are analysed. The linear visco-elastic shells are analysed first. In non-linear viscoelasticity special attention is paid to steady creep problems. Further, the theory of elastic plastic deformation is discussed. Finally, a coverage of the limit analysis theory of shells from the viewpoint of applications in various branches of technology, mostly in structural engineering, is presented. Up to date critical bibliography on inelastic shells is enclosed. The work also includes the results and methods presented at the 'International Association for Shell Structure' symposium on non-classical shell problems, held in Warsaw, 1963, of those presented at the IUTAM Congress, Munich, 1964, and of those presented at the Conference on Elasticity and Plasticity, Zakopane, Poland, 1964.

cloth bound - Dfl. 25,— - \$ 6.90)

Systems of singular integral equations / N. P. Vekua

In this work the author presents a complete theory of systems of singular integral equations with Cauchy type kernels, including the important cases of arcs and discontinuous coefficients. This book may be considered as a sequel to Muskhelishvili's 'Singular Integral Equations'.
