Consciousness and Self-Regulation Advances in Research and Theory

edited by **Gary E. Schwartz**
Yale University

and **David Shapiro**
University of California, Los Angeles

"With the biological orientation of this series, the editors have performed a much needed service by providing the reader with a review of the best contemporary research in the field. It is to be recommended to all researchers who maintain an interest in the psychophysiological aspects of consciousness research."

—**Michael Malizewski**, *Psychoenergetic Systems: An International Journal*

Volume 2

This volume explores consciousness as a complex neuropsychological structure system with semantic function; the relationship between sensory, cognitive, and motor processes; factors which regulate our moment-to-moment awareness; the capacity of the brain to process and respond to information that it is not consciously aware of; visceral activity, self-regulation, and EEG alpha rhythms; and a comparison of meditation with different types of biofeedback in the regulation of stress. 470 pp., illus., 1978, \$22.50

Volume 1

Volume 1 offers original articles reporting the best research and theories on the nature of conscious experience, the mind-body relationship, cognition and self-report, and other complex problems critical to our understanding of human nature. 422 pp., illus., 1976, \$22.50

This series not available from Plenum in the United Kingdom, Europe, the Middle East (including Israel), and Africa.

Advances in Parapsychological Research

Volume 1

Psychokinesis

edited by **Stanley Krippner**
Humanistic Psychology Institute, San Francisco

"[*Psychokinesis*] can certainly be counted as an addition to the serious literature in parapsychology. The series as envisioned by its editorial board could be a useful reference source for nonspecialists in the field in that it would provide them with periodic summaries of recent advances in parapsychology. It thus would serve as a useful communication device between the parapsychological community and scientists in other specialty areas."

—**Douglas M. Stokes**, *Journal of the American Society for Psychical Research*

248 pp., 1977, \$18.95

Consciousness and the Brain A Scientific and Philosophical Inquiry

edited by **Gordon G. Globus**
University of California, Irvine

Grover Maxwell
University of Minnesota
and **Irwin Savodnik**
University of Pittsburgh

"... the occasion of an elite gathering of philosophers and scientists. ... There are ten major reports—solid, informed and thoughtful. Some are brilliant, such as Karl Pribram's overall review of the question and his proposal of 'constructional realism.'"

—*Somatics Magazine*

378 pp., 1976, \$24.50

Two volumes in the Emotions, Personality, and Psychotherapy Series

The Stream of Consciousness Scientific Investigations into the Flow of Human Experience

edited by **Kenneth S. Pope**
Brentwood Veterans Administration Hospital, Los Angeles
and **Jerome L. Singer**
Yale University

This new book brings together experts from the fields of human development, medicine, and clinical and experimental psychology. It is the first publication to provide examples, models, and strategies for the creative, scientific examination of consciousness as a continuous flow of experiences. 392 pp., illus., 1978, \$24.50

Not available from Plenum in the United Kingdom, Europe, the British Commonwealth, and the Middle East (including Israel).

Its companion volume

The Power of Human Imagination New Methods in Psychotherapy

edited by **Jerome L. Singer**
and **Kenneth S. Pope**

Examines the major new developments in the clinical application of imagery and related fantasy activities, emphasizing the tremendous adaptive possibilities for treatment of emotional disorders. 426 pp., illus., 1978, \$25.00

Attachment Behavior

edited by **Thomas Alloway, Patricia Pliner**
and **Lester Krames**
University of Toronto

"The book provides a useful overview of some of the current empirical work of both child and comparative psychologists, as well as some of the emerging theoretical considerations in the field. While written for professionals working in the area, little technical background is necessary to read most of the chapters. Thus the book is quite appropriate for an undergraduate library with advanced readers."

ASYMMETRICAL FUNCTION OF THE BRAIN

MARCEL KINSBOURNE, Editor

Articles by Professor Kinsbourne, one of the leading proponents of research on brain asymmetry, open and close this volume which includes fifteen articles presenting up-to-date information on the functional interactions between the hemispheres of the brain. \$29.95

A GUIDE FOR BEGINNING PSYCHOTHERAPISTS

JOAN S. ZARO, ROLAND BARACH, DEBORAH JO NEDELMAN
and IRWIN S. DREIBLATT

Written with the student in mind, this comprehensive introduction provides practical guidance on the initial tasks and problems confronting the beginning psychotherapist. The authors have avoided the use of "insider's" jargon, making the *Guide* accessible not only to therapists of all theoretical persuasions, but also to physicians and counselors who may be called upon to respond to a psychological problem. Hardcover \$15.95 Paper \$6.50

GROUPS AND INDIVIDUALS

Explanations in Social Psychology

WILLEM DOISE

Douglas Graham, Translator

Professor Doise proposes an approach to the study of intergroup relations that integrates sociological and psychological models of explanation. He discusses the contributions of Lorenz, Freud and Piaget, and offers a detailed account of experimental studies in intergroup relations, including some of the most recent. Hardcover \$23.95 Paper \$7.95

THINKING

Readings in Cognitive Science

P. N. JOHNSON-LAIRD and P. C. WASON, Editors

This volume contains thirty-four articles on the present state and future prospects of the scientific study of thinking. The editors have brought together a set of readings on topics ranging from cognitive psychology and artificial intelligence, to psycholinguistics and philosophy. Hardcover \$39.95 Paper \$10.95
