JOURNAL OF PLASMA PHYSICS

https://doi.org/10.1017/S002237780000533X Published online by Cambridge University Press

JOURNAL OF PLASMA PHYSICS exists for the publication of experimental and theoretical research papers on plasma physics and its applications.

EDITOR

DR J. P. DOUGHERTY

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge, England

ASSOCIATE EDITORS

PROF. D. BERSHADER

Department of Aeronautics and Astronautics, Stanford University, Stanford, California 94305, *U.S.A.*

PROF. F. D. KAHN

Department of Astronomy, University of Manchester, Manchester 13, *England*

PROF. W. B. THOMPSON

Department of Physics, University of California, La Jolla, California 92038, *U.S.A.*

Authors wishing to have papers published in the JOURNAL should communicate them to any one of the persons named above, choosing one in their own country where possible.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 15 in. by 24 in. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

JOURNAL OF PLASMA PHYSICS is published quarterly by Cambridge University Press, P.O. Box 92, London, N.W.1 and 32 East 57th Street, New York, N.Y. 10022.

Single parts cost £3 net ($9.00 in the U.S.A.) plus postage.

Four parts form a volume. The subscription price of a volume (which includes postage) is £10 net ($32.50 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, N.Y.

CONTENTS TO VOLUME 4

PART 1 FEBRUARY 1970

Plasma containment in a spherical multipole magnetic trap. M. SADOWSKI *page* 1

A temperature-anisotropy instability for electromagnetic waves propagating across a static magnetic field. R. W. LANDAU and S. CUPERMAN 13

Relaxation of a temperature anisotropy in a collisionless plasma. C. MONTES, J. COSTE and G. DIENER 21

Helicon wave propagation: effect of electron inertia. B. DAVIES 43

Kinetic theory of a spatially inhomogeneous plasma with time independent average properties. R. A. CAIRNS 51

Reflexion of a plane wave at a plasma half-space. P. C. CLEMMOW and V. B. KARUNARATHNE 67

Application of the collective approach to the thermodynamics of an electron gas. L. J. CAROFF and R. L. LIBOFF 83

Non-linear dispersion of cold plasma waves. C. K. W. TAM 109

Landau damping of resonance oscillations in inhomogeneous plasmas. G. DORMAN 127

A note on the semi-Lagrangian formulation of the Vlasov equation. G. J. LEWAK 143

Solution of the Boltzmann equation for electrons in external electric fields. L. STENFLO 145

Magnetic-field re-connexion in a highly conducting incompressible fluid. B. U. Ö. SONNERUP 161

Quasilinear dynamics of ion cyclotron instability in an anisotropic plasma. J. PREINHAELTER and J. VÁCLAVÍK 175

A note on ion rarefaction waves. J. E. ALLEN and J. G. ANDREWS 187

One-dimensional ion-acoustic modes of bounded plasmas. R. ROSA and J. E. ALLEN 195

REVIEWS

Gaz ionisés. Décharges electriques dans le gaz 204

Negative Ions and the Magnetron 204

PART 2 MAY 1970

On the re-connexion of magnetic field lines in conducting fluids. TYAN YEH and W. IAN AXFORD 207

Cyclotron harmonic wave propagation and instabilities. I. Perpendicular propagation. J. A. TATARONIS and F. W. CRAWFORD 231

https://doi.org/10.1017/S002237780000533X Published online by Cambridge University Press

Cyclotron harmonic wave propagation and instabilities. II. Oblique propagation. J. A. Tataronis and F. W. Crawford *page* 249

Dissipation discontinuities in hydromagnetic shock waves. F. V. Coroniti 265

Anisotropic plasma pressure and the dielectric tensor. Tudor Wyatt Johnston 283

Growing plasma oscillations for symmetrical double-humped velocity distributions. S. W. H. Cowley 297

Hydromagnetic structure of a current sheet. Patrick Cassen 301

Continuum theory of spherical electrostatic probes (frozen chemistry). William B. Bush and Francis E. Fendell 317

Problems of determination of high temperature thermodynamic properties of rare gases with application to mixtures. M. Capitelli and E. Molinari 335

Parametric excitation of a plasma. C. S. Chen and G. J. Lewak 357

Asymptotic matching of plasma and sheath in an active low pressure discharge. R. N. Franklin and J. R. Ockendon 371

Suppression of runaway of electrons in a Lorentz plasma. I. Harmonically time varying electric field. Barbara Abraham-Shrauner 387

The effects of finite Larmor radius on the perturbation flow mixing of a collisionless plasma. Shigeki Morioka and John R. Spreiter 403

Reviews

Plasma Waves in Space and Laboratory 425

Electrodynamics of Particles and Plasmas 425

Part 3 September 1970

Diatomic gas-thermal radiation interaction between parallel plates. Warren F. Phillips, Vedat S. Arpaci and Poul S. Larsen 429

Suppression of runaway of electrons in a Lorentz plasma. II. Crossed electric and magnetic fields. Barbara Abraham-Shrauner 441

Effect of Hall current and resistivity on the stability of a gas-liquid system. G. L. Kalra, S. N. Kathuria, R. J. Hosking and G. G. Lister 451

Relativistic synchrotron plasma echo. E. Ott 471

Precursor ionization effects on magnetohydrodynamic switch-on shock structure. Martin I. Hoffert 477

Stability of relativistic anisotropic plasmas to perpendicular magnetosonic waves. R. W. Landau and S. Cuperman 495

https://doi.org/10.1017/S002237780000533X Published online by Cambridge University Press

The steady-state Vlasov equations for a monotonic electric potential. A. Smith *page* 511

The character of equilibrium of an inviscid, infinitely conducting fluid of variable density in the presence of a horizontal magnetic field with Hall-current. P. D. Ariel 523

The decomposition of a decelerating ionizing shock. D. M. Sloan 531

An exact electrostatic shock solution for a collisonless plasma. A. Smith 549

Effect of gyro-viscosity on Rayleigh–Taylor instability of a plasma. N. K. Nayyar and S. K. Trehan 563

Electromagnetic radiation from a laser produced plasma expanding into a uniform magnetic field. H. Searl Dunn and Moshe J. Lubin 573

Kinetic theory of three-wave interaction in a magnetized plasma. L. Stenflo 585

A new derivation of quasilinear theory. J. P. Klozenberg and Ira B. Bernstein 595

The sheath criterion for a growing sheath. J. G. Andrews 603

The two-stream instability and its classification into absolute and convective for hot plasmas. E. Infeld and A. Skorupski 607

Low wavelength ion-acoustic waves in a magneto-plasma in a gravitational field. C. H. Liu 617

Effect of dissipation due to firehose instability on perturbation half-jet flow of a collisionless plasma. Shigeki Morioka and John R. Spreiter 629

Corrigendum 643

Part 4 December 1970

Dynamic stability of closed plasma configurations. D. R. Wells 645

A class of solutions of quasilinear equations. A. A. Ivanov and J. Teichmann 667

Discrete spectra and damped waves in quasilinear theory. G. Vahala and D. Montgomery 677

Ion waves, drift waves and instability in a weakly ionized magneto-plasma. S. A. Self 693

The effect of velocity space diffusion on the universal instability in a plasma. R. S. B. Ong and M. Y. Yu 729

Longitudinal waves in a perpendicular collisionless plasma shock. I. Cold ions. S. P. Gary and J. J. Sanderson 739

https://doi.org/10.1017/S002237780000533X Published online by Cambridge University Press

Longitudinal waves in a perpendicular collisionless plasma shock. II. Vlasov ions. S. P. Gary *page* 753

Lagrangian methods in plasma dynamics. I. General theory of the method of the averaged Lagrangian. J. P. Dougherty 761

Resistive loading by a finite plasma cylinder. D. E. Hasti, M. E. Oakes and H. Schlüter 787

Theory of a test particle in an inhomogeneous stationary plasma. R. A. Cairns 801

A boundary problem in a plasma. V. B. Karunarathne 807

Higher order approximations in the theory of longitudinal plasma oscillations. II. F. Einardi and W. I. Axford 819

Radiation from a charged particle in a magnetoplasma. J. Trulsen and J. A. Fejer 825

An exact treatment of collisional effects on temporal plasma wave echoes: free-particle model. Y. Furutani and J. Coste 843

Index to Volume 4 848
