

## Subscription rates

Subscription rates for volume **50** (2018) of *Advances in Applied Probability* (AAP) are as follows (post free and online access at <http://cambridge.org/apr>). For libraries and institutions: US\$381.00, £246.00 (online only); US\$418.00, £270.00 (online & print). For individuals, US\$144.00, £92.00 (online & print). The subscription rates for volume **55** (2018) of *Journal of Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0001–8678/18

**Volume 50**      **Number 1**

- 1     R. D. FOLEY AND D. R. MCDONALD. Yaglom limits can depend on the starting state
- 35    NICOLAS CHENAVIER AND OLIVIER DEVILLERS. Stretch factor in a planar Poisson–Delaunay triangulation with a large intensity
- 57    HUI XU, FENGYANG CHENG, YUEBAO WANG AND DONGYA CHENG. A necessary and sufficient condition for the subexponentiality of the product convolution
- 74    VIKTOR BEZBORODOV, LUCA DI PERSIO, TYLL KRUEGER, MYKOLA LEBID AND TOMASZ OŻAŃSKI. Asymptotic shape and the speed of propagation of continuous-time continuous-space birth processes
- 102   THOMAS FLYNN. Forward sensitivity analysis for contracting stochastic systems
- 131   HIROAKI HATA AND SHUENN-JYI SHEU. An optimal consumption and investment problem with partial information
- 154   THI NGOC MINH NGUYEN, SYLVAIN LE CORFF AND ERIC MOULINES. On the two-filter approximations of marginal smoothing distributions in general state-space models
- 178   NICOLAS CHAMPAGNAT AND DENIS VILLEMONAIS. Uniform convergence of conditional distributions for absorbed one-dimensional diffusions
- 204   ROLANDO CAVAZOS-CADENA AND DANIEL HERNÁNDEZ-HERNÁNDEZ. Vanishing discount approximations in controlled Markov chains with risk-sensitive average criterion
- 231   PIERRE HOUDEBERT. Percolation results for the continuum random cluster model
- 245   MATTHEW I. ROBERTS. The probability of unusually large components in the near-critical Erdős–Rényi graph
- 272   DAVID ARISTOFF AND LINGJIONG ZHU. On the phase transition curve in a directed exponential random graph model
- 302   THOMAS M. M. MEYFROYT. Degree-dependent threshold-based random sequential adsorption on random trees
